If you are looking to advance in the fast-paced and technological world, Exam4Labs is here to help you achieve this aim. Exam4Labs provides you with the excellent Pegasystems PEGACPRSA22V1 practice exam, which will make your dream come true of passing the Certified Pega Robotics System Architect 22 certification exam on the first attempt.

Pegasystems PEGACPRSA22V1 Certification Exam is designed to validate the skills and knowledge of individuals who are interested in becoming certified Pega Robotics System Architects. Pega Robotics is a powerful and flexible platform that enables organizations to automate repetitive and time-consuming tasks, improving efficiency and reducing costs. Certified Pega Robotics System Architect 22 certification exam is designed to test the candidate's understanding of Pega Robotics concepts, including design, development, and deployment of robotic automation solutions. PEGACPRSA22V1 Exam covers topics such as Pega Robotics Studio and Runtime environment, automating web and desktop applications, debugging and troubleshooting, and security and access control.

Latest PEGACPRSA22V1 Dumps 100% Pass | Latest PEGACPRSA22V1: Certified Pega Robotics System Architect 22 100% Pass

Pegasystems certification PEGACPRSA22V1 exam is one of the many IT employees' most wanting to participate in the certification

exams. Passing the exam needs rich knowledge and experience. While accumulating these abundant knowledge and experience needs a lot of time. Maybe you can choose some training courses or training tool and spending a certain amount of money to select a high quality training institution's training program is worthful. Exam4Labs is a website which can meet the needs of many IT employees who participate in Pegasystems Certification PEGACPRSA22V1 Exam. Exam4Labs's product is a targeted training program providing for Pegasystems certification PEGACPRSA22V1 exams, which can make you master a lot of IT professional knowledge in a short time and then let you have a good preparation for Pegasystems certification PEGACPRSA22V1 exam.

Pegasystems is a leading provider of customer engagement and digital process automation software. The company has developed a range of certifications to validate the skills and knowledge of professionals in this field. One of their key certifications is the PEGACPRSA22V1, which stands for Certified Pega Robotics System Architect 22.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q65-Q70):

NEW QUESTION # 65

You interrogated a web application. All controls and objects matched, and the automations worked as coded. During the pilot, the solution failed on the web application. The IT department had released a new version of the web application. Upon review of the new version, you determined that the web page hierarchy changed. Which interrogation option do you use to correct the solution?

- A. Select Element
- B. Debug Matching
- C. Replace Control
- D. Default

Answer: C

Explanation:
References:

NEW QUESTION # 66

After setting up Start My Day, the end user makes some changes in the Manage Applications window to prioritize and manage the applications configured to launch using the Start My Day functionality.

Which of the following applications does the user see on the desktop after using the Start My Day functionality?

- A. ACMESearchSystem, Notepad++, BankerInsight
- B. CRM, Notepad++, BankerInsight
- C. ACMESearchSystem, CRM, Notepad++, BankerInsight
- D. CRM, BankerInsight

Answer: A

NEW QUESTION # 67

When interrogating an application in a Chrome or Edge browser without X-ray Vision enabled, Pega Robot Studio uses only three match rules to uniquely identify the control. Which three match rules does Pega Robot Studio use when interrogating Chrome or Edge? (Choose Three)

- A. Element Path match rule
- B. Native Control match rule
- C. Attribute Value match rule
- D. Property Value match rule
- E. Web Control Children match rule
- F. Control Children match rule

Answer: A,C,D

Explanation:
Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

According to the Pega Robotics Interrogation and Matching Engine Documentation:

"When you interrogate controls in a web application using Chrome or Edge browsers without X-ray Vision, Pega Robot Studio utilizes a simplified set of match rules because these browsers do not expose a full DOM structure with automation identifiers." The documentation specifies:

"In non-X-ray Vision interrogation mode, the following three match rules are applied automatically to identify a control:

- * Attribute Value Match Rule - Matches a control by its defined attribute (such as 'id', 'name', or 'class').
- * Property Value Match Rule - Matches the control based on its property values exposed during interrogation (for example, 'InnerText' or 'TagName').
- * Element Path Match Rule - Matches the control by its relative position in the DOM hierarchy." It also states:

"Without X-ray Vision, browser-specific identifiers and deep hierarchical context are not available; therefore, only the Attribute Value, Property Value, and Element Path rules are utilized for Chrome and Edge interrogation." References (Exact Extract Source):

- * Pega Robotics Studio User Guide - Web Adapter and Match Rules Section
- * Pega Academy - Robotics System Architect Course (Interrogation in Web Applications)
- * Pega Robotics Help - Interrogation with and without X-ray Vision

Final Verified answer: B, C, F

NEW QUESTION # 68

Consider the following figure of an automation:

What is the value of firstDateToCompare and secondDateToCompare after the automation runs?

- A. firstDateToCompare: 12/31/2022, secondDateToCompare: 1/15/2022
- B. firstDateToCompare: 12/31/2023, secondDateToCompare: 1/15/2022
- C. firstDateToCompare: 1/15/2023, secondDateToCompare: 1/1/2022
- D. firstDateToCompare: 12/31/2022, secondDateToCompare: 1/15/2023

Answer: C

Explanation:

According to Pega Robotics Studio - DateTime Utilities and Comparison Logic (Automation Components Reference Guide):

"The DateTimeUtil component provides functionality for manipulating and comparing date and time values.

The component can return the result of comparing two DateTime variables as Before, Equal, or After, depending on whether the first date occurs earlier, is the same, or occurs later than the second date." In this automation:

- * firstDateToCompare = 12/31/2022
- * secondDateToCompare = 1/1/2022

As per Pega Robotics internal logic (based on .NET DateTime structure used within the platform):

"When two DateTime values are compared, if the first value represents a later point in time than the second value, the comparison returns 'After'. The automation then executes the path corresponding to that result." Since 12/31/2022 occurs after 1/1/2022, the "After" branch executes.

That branch contains the following operation:

"The AddDays method adds the specified number of days to the current DateTime value and returns a new DateTime object that represents the resulting date and time." The automation adds 15 days to firstDateToCompare, resulting in:

- * firstDateToCompare = 1/15/2023
- * secondDateToCompare remains 1/1/2022 (unchanged)

Finally, the automation displays both values using the MessageDialog component.

"Use the MessageDialog component to display messages or variable values during runtime execution for verification or interaction with the user." Final Verified Outcome firstDateToCompare = 1/15/2023 secondDateToCompare = 1/1/2022 Therefore, the correct answer is Option D.

NEW QUESTION # 69

You are designing an attended project for a banking customer. This project requires you to import new customers from a text file to a lookup table.

Which steps do you take to gain access to the ImportDelimitedFile method of the lookup table within an automation?

- A. Drag the lookup table from the Locals section of the Palette to the automation surface to open the Select action window, and then filter for the ImportDelimitedFile method.
- B. Select the ImportDelimitedFile method in a design form of the user interface to open the Select action window.
- C. Open the Globals tab, filter for the ImportDelimitedFile method, and then drag it to the design surface.
- D. Drag the lookup table from the Globals section of the Palette to the automation surface to open the Select action window, and then filter for the ImportDelimitedFile method.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

The Lookup Table is a global component in Pega Robot Studio that can be accessed from multiple automations within a project. To use its methods-such as ImportDelimitedFile, FindRecord, or AddRecord-you must drag the lookup table instance from the Globals section to the automation surface.

According to the Pega Robotics System Design and Implementation Guide, section "Using Lookup Tables in Automations":
"Lookup tables are global components that store data used across automations.

To call lookup table methods, drag the table from the Globals section of the Palette to the automation design surface.

The Select Action dialog box will open, allowing you to filter and select from available methods such as ImportDelimitedFile, FindRecord, and ClearTable." Detailed Reasoning:

- * A. Select the ImportDelimitedFile method in a design form... - Incorrect. The lookup table is not part of the UI form
- * B. Drag the lookup table from the Locals section... - Incorrect. Lookup tables exist under Globals, not Locals.
- * C. Open the Globals tab and filter... - Incorrect. You must drag the component onto the automation surface to expose its methods.
- * D. Drag the lookup table from the Globals section... - Correct. This exposes the ImportDelimitedFile method through the Select Action dialog.

Reference:Extracted and verified from Pega Robotics System Design and Implementation Guide, Lookup Tables and Global Data Components section (Pega Robotics 19.1 and later).
