

検証するNetwork Appliance NS0-528: Implementation Engineer - Data Protection Exam資格専門知識 -専門的なFast2test NS0-528最新問題

当社Fast2testは多くの優秀な専門家や教授がいます。過去数年、これらの専門家と教授は、すべての顧客向けに NS0-528試験問題を設計するために最善を尽くしました。さらに重要なことは、最終的にNS0-528試験問題で NS0-528認定を取得すると、人生の楽しみと人間関係の改善、ストレスの軽減、全体的な生活の質の向上という大きなメリットが得られることです。そのため、NS0-528試験に合格し、関連する認定を取得するために全力を尽くすことは非常に重要です。

Network Appliance NS0-528 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.
トピック 2	• Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.
トピック 3	• NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.
トピック 4	• NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.

- NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.

有難いNS0-528資格専門知識試験-試験の準備方法-最高のNS0-528最新問題

長期的にNS0-528学習ガイドを選択することを決めたさまざまな国のお客様に利益をもたらしたいと考えています。そのため、この分野の主要な専門家と協力して学習資料を更新および更新します。弊社の有力な専門家は、この分野の最新情報を提供し、時代に対応し、知識のギャップを埋めることを目指しています。お支払い後、年間を通じて当社からNS0-528トレーニング資料の最新バージョンを無料で入手できることを保証できます。国際市場で最高のNS0-528準備質問を購入する機会をお見逃しなく。これは時代の進歩にも役立ちます。

Network Appliance Implementation Engineer - Data Protection Exam 認定 NS0-528 試験問題 (Q67-Q72):

質問 # 67

You have a network outage that affects client access to site B. You need to temporarily reverse the SnapMirror relationship of a volume to serve data from site B.

Which two steps must you perform first? (Choose two.)

- A. Take the source volume offline.
- B. Break the SnapMirror relationship.
- C. Delete the SnapMirror relationship.
- D. Abort the SnapMirror relationship.

正解: A、B

質問 # 68

Your customer wants to replicate an SVM containing NAS data from NetApp ONTAP Cluster01 to two different ONTAP systems, Cluster02 and Cluster03. In the event of a disaster, at least one of the destination clusters must be able to serve data from the destination SVM.

Which two configurations are supported in a SnapMirror SVM replication? (Choose two.)

- A. Cluster01 -> Cluster02 with -identity-preserve true
- B. Cluster01 -> Cluster03 with -identity-preserve false
- C. Cluster02 -> Cluster03 with -identity-preserve false
- D. Cluster02 -> Cluster03 with -identity-preserve true

正解: A、B

解説:

****_identity-preserve true**** replicates the full identity and configuration of the source SVM, and the destination SVM remains offline until a failover. This is ideal for disaster recovery.

****_identity-preserve false**** allows the destination SVM to be online, typically in read-only mode, which supports access during normal operation (e.g., for testing or additional DR flexibility).

Both configurations support SVM replication, fulfilling the requirement that at least one destination can serve data in the event of a disaster.

質問 # 69

What is a cloud tiering policy in NetApp ONTAP?

- A. A set of rules for encrypting data to protect it from unauthorized access
- B. A set of rules for compressing data to reduce storage space
- C. A set of rules for moving data between on-premises and cloud storage
- D. A set of rules for optimizing data access

正解: C

質問 # 70

You want to replicate data from ONTAP to NetApp Cloud Backup (formerly AltaVault). To prevent a conflict with another backup application, you need to update the policy that contains the backup schedule so that the backup runs at a different time of day. Which product would accomplish this task?

- A. Commvault IntelliSnap
- B. OnCommand Unified Manager
- C. OnCommand Insight
- D. OnCommand System Manager

正解: D

質問 # 71

A customer needs a monthly report with security recommendations from multiple NetApp ONTAP clusters. Which NetApp option enables the customer to schedule a security report?

- A. SANtricity
- B. Active IQ OneCollect
- C. Active IQ Unified Manager
- D. ONTAP System Manager

正解: C

解説:

Active IQ Unified Manager allows customers to schedule monthly security reports across multiple ONTAP clusters. These reports include security posture, compliance status, and actionable recommendations, making it the correct tool for centralized security monitoring and reporting.

質問 # 72
