最新的 FCSS in Security Operations FCSS_ADA_AR-6.7 免費考試真題 (Q10-Q15):
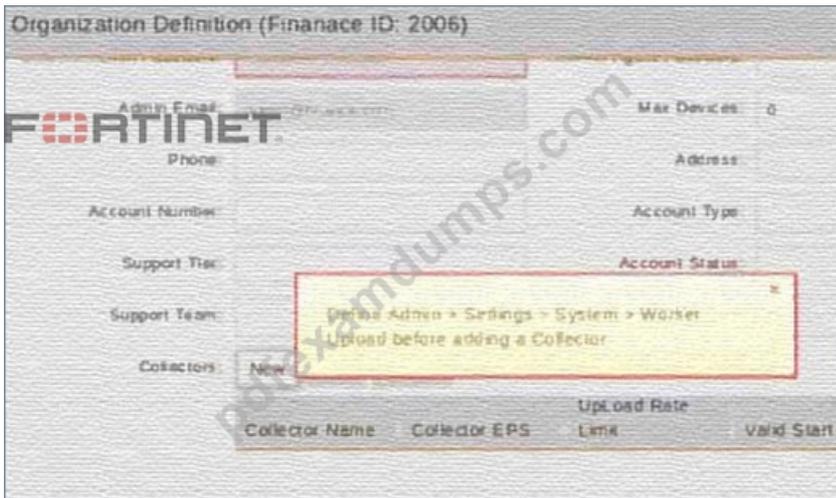

問題 #10
If a FortiSIEM rule is constructed to detect a potential data exfiltration attempt, which framework can provide insights on the techniques attackers might use for this purpose?

- A. OWASP Top Ten?
- B. NIST SP 800-53?
- C. ISO/IEC 27001?
- D. MITRE ATT&CK®?

答案：D

Refer to the exhibit.

A service provider does not have a dedicated worker in the cluster, but still wants to add a collector to an organization. What option does the administrator have?

- A. Install a worker
- B. Define the supervisorIP address as a worker unload address
- C. Define a pseudo address as a worker IP address
- D. Ignore the warning and continue adding the collector

答案：B

解題說明：

InFortiSIEM, collectors need to upload event logs to aworker nodefor processing. However, if there isno dedicated worker, thesupervisor can function as the workerto receive data.

\# The error message suggests that aworker upload addressmust be defined before adding a collector.

\# Since there isno dedicated worker, the administrator canset the Supervisor IP as the upload destinationto enable log collection.

問題 #12

Which three statements about collector communication with the FortiSIEM cluster are true? (Choose three.)

- A. The supervisor does not initiate any connections to the collector node.
- B. Collectors communicate periodically with the supervisor node.
- C. The only communication between the collector and the supervisor is during the registration process.
- D. The supervisor periodically checks the health of the collector.
- E. Collectors upload event data to any node in the worker upload list, but report their health directly to the supervisor node.

答案：A,B,E

問題 #13

A service provider purchases a licensed EPS of 520. The guaranteed EPS allocated to three customers is 50, 100, and 150 respectively. At the end of every three-minute interval, incoming EPS is calculated at every collector and the value is sent to the central decision-making engine on the supervisor node.

The incoming EPS for the first collector is 25. the incoming EPS for the second collector is 50, and the incoming EPS for the third collector is 75.

Based on the information provided, what is the unused events total calculated by the supervisor?

- A. 71.460
- B. 75.960
- C. 35.960
- D. 76.000

答案：B

問題 #14

Refer to the exhibit.

Why was this incident auto cleared?

- A. The original rule did not trigger within five minutes
- B. Within five minutes, the packet loss percentage dropped to a level where the reporting IP is same as the source IP
- C. Within five minutes the packet loss percentage dropped to a level where the reporting IP is the same as the host IP
- D. Within five minutes, the packet loss percentage dropped to a level where the host IP of the original rule matches the host IP of the clear condition pattern

答案：D

解題說明：
From the "Clear If" condition in the exhibit:
*WITHIN 5 minutes, the system checks if the pattern AllPingLossSrv_CLEAR occurs.
*The Host IP of the clear condition must match the Host IP of the original rule (Clear_Condition.Host IP = Original_Rule.Host IP).
*If this condition is met, the system automatically clears the incident because it indicates that network connectivity has been restored (packet loss has dropped).
Thus, the incident was auto-cleared because the system detected that the issue was resolved within the defined 5-minute window, meeting the conditions for auto-clearance.
