The primary reason behind their failures is studying from VMware 2V0-13.25 exam preparation material that is invalid. Due to the massive popularity of the VMware Cloud Foundation 9.0 Architect (2V0-13.25) exam, Exam4Labs have come forward to offer authentic and real Selling 2V0-13.25 Exam Questions so that its valued customers can prepare successfully in a short time. The product provided by Exam4Labs are available in three formats. These formats contain VMware 2V0-13.25 Exam Questions that are relevant to the VMware Cloud Foundation 9.0 Architect (2V0-13.25) actual exam. The Selling VMware Cloud Foundation 9.0 Architect (2V0-13.25) practice test material for Exam4Labs are there to download after your purchase.

We have security and safety guarantee, which mean that you cannot be afraid of virus intrusion and information leakage since we have data protection acts, even though you end up studying 2V0-13.25 test guide of our company, we will absolutely delete your personal information and never against ethic code to sell your message to the third parties. Our 2V0-13.25 Exam Questions will spare no effort to perfect after-sales services. Thirdly countless demonstration and customer feedback suggest that our VMware Cloud Foundation 9.0 Architect study question can help them get the certification as soon as possible, thus becoming the elite, getting a promotion and a raise and so forth.

2026 Valid Pdf 2V0-13.25 Version | 100% Free New 2V0-13.25 Dumps Questions

More and more people hope to enhance their professional competitiveness by obtaining 2V0-13.25 certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the 2V0-13.25 examination. In order to guarantee the gold content of the 2V0-13.25 Certification, the official must also do so. However, it is an indisputable fact that a large number of people fail to pass the 2V0-13.25 examination each year, some of them may choose to give it up while others may still choose to insist.

VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
Topic 2	<ul style="list-style-type: none">• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.
Topic 3	<ul style="list-style-type: none">• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
Topic 4	<ul style="list-style-type: none">• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Topic 5	<ul style="list-style-type: none">• Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q99-Q104):

NEW QUESTION # 99

Which Broadcom hardware solutions are key to optimizing VMware network performance?

- A. Broadcom Fibre Channel HBAs
- B. Broadcom RAID Controllers
- C. USB network adapters for low-cost solutions
- D. Broadcom 25GbE Ethernet adapters

Answer: A,D

Explanation:

Broadcom 25GbE Ethernet adapters and Fibre Channel HBAs are key to network performance optimization in VMware.

NEW QUESTION # 100

What steps should be taken to resolve VMware performance issues caused by Broadcom 25GbE Ethernet adapters?

- A. Disable adapter offload features
- B. Test for packet loss
- C. Check network adapter settings
- D. Verify network load balancing configuration

Answer: B,C,D

Explanation:

Ensuring proper adapter settings, testing for packet loss, and load balancing configuration are key troubleshooting steps.

NEW QUESTION # 101

Which features of VMware Cloud Foundation enhance operational efficiency?

- A. VMware vSphere
- B. VMware NSX
- C. VMware vRealize Operations
- D. VMware vRealize Automation

Answer: C,D

Explanation:

VMware vRealize Operations and vRealize Automation are essential for improving operational efficiency in VMware Cloud Foundation.

NEW QUESTION # 102

An architect is tasked with updating the design for an existing VMware Cloud Foundation (VCF) deployment to include four vSAN ESA ready nodes.

The existing deployment comprises the following:

Four homogenous vSAN ESXi ready nodes in the management domain.

Four homogenous ESXi nodes with iSCSI principal storage in workload domain A.

What should the architect recommend when including this additional capacity for application workloads?

- A. Create a new vLCM baseline workload domain with the four new nodes.
- B. Create a new vLCM image workload domain with the four new nodes.
- C. Create a new vLCM baseline cluster in the existing workload domain with the four new nodes.
- D. Commission the four new nodes into the existing workload domain A cluster.

Answer: A

Explanation:

The task involves adding four vSAN ESA (Express Storage Architecture) ready nodes to an existing VCF 5.2 deployment for application workloads. The current setup includes a vSAN-based Management Domain and a workload domain (A) using iSCSI storage. In VCF, workload domains are logical units with consistent storage and lifecycle management via vSphere Lifecycle Manager (vLCM).

Let's analyze each option:

Option A: Commission the four new nodes into the existing workload domain A cluster. Workload domain A uses iSCSI storage, while the new nodes are vSAN ESA ready. VCF 5.2 doesn't support mixing principal storage types (e.g., iSCSI and vSAN) within a single cluster, as per the VCF 5.2 Architectural Guide. Commissioning vSAN nodes into an iSCSI cluster would require converting the entire cluster to vSAN, which isn't feasible with existing workloads and violates storage consistency, making this impractical.

Option B: Create a new vLCM image workload domain with the four new nodes. This phrasing is ambiguous. vLCM manages ESXi images and baselines, but "vLCM image workload domain" isn't a standard VCF term. It might imply a new workload domain with a custom vLCM image, but lacks clarity compared to standard options (C, D). The VCF 5.2 Administration Guide uses "baseline" or

"image-based" distinctly, so this is less precise.

Option C: Create a new vLCM baseline cluster in the existing workload domain with the four new nodes Adding a new cluster to an existing workload domain is possible in VCF, but clusters within a domain must share the same principal storage (iSCSI in workload domain A). The VCF 5.2 Administration Guide states that vSAN ESA requires a dedicated cluster and can't coexist with iSCSI in the same domain configuration, rendering this option invalid.

Option D: Create a new vLCM baseline workload domain with the four new nodes A new workload domain with vSAN ESA as the principal storage aligns with VCF 5.2 design principles. vLCM baselines ensure consistent ESXi versioning and firmware for the new nodes. The VCF 5.2 Architectural Guide recommends separate workload domains for different storage types or workload purposes (e.g., application capacity). This leverages the vSAN ESA nodes effectively, isolates them from the iSCSI-based domain A, and supports application workloads seamlessly.

Conclusion:

Option D is the best recommendation, creating a new vSAN ESA-based workload domain managed by vLCM, meeting capacity needs while adhering to VCF 5.2 storage and domain consistency rules.

vSAN ESA Planning and Deployment Guide (docs.vmware.com): Storage Requirements.

NEW QUESTION # 103

Requirements:

* Workloads across multiple datacenters (DC01, DC02)

* Support two-factor authentication (2FA)

* Reduce operational overhead

Which two design decisions should be documented for the VCF Single Sign-On (SSO) architecture?

- A. Deploy VIDB in the first VCF instance management domain at DC01.
- B. Configure all additional VCF instances in the same region to point to the VIDB in the first VCF instance at DC02.
- C. Deploy VIDB in the management domain of every VCF instance in all sites.
- D. Configure all additional VCF instances in the same private cloud to point to the VIDB in the first VCF instance at DC01.
- E. Deploy VIDB in the management domain of each VCF instance at DC02.

Answer: A,D

Explanation:

The VCF Identity Broker (VIDB) enables integration with enterprise identity systems and supports MFA.

To reduce operational overhead:

* Deploy VIDB once in the first VCF instance at DC01.

* Point all additional VCF instances in the same private cloud to this VIDB.

This avoids deploying and managing multiple VIDB instances, reducing lifecycle overhead while still enabling 2FA.

Options A/B introduce unnecessary duplication. Option C centralizes in DC02, but requirement specifies DC01 is primary.

Reference: VMware Cloud Foundation 9.0 - Identity Broker Design Guide.

NEW QUESTION # 104

.....

As the saying goes, knowledge has no limits. You may be old but the spirit of endless learning won't be old. If you attend the test of 2V0-13.25 certification you will update your stocks of knowledge and improve your actual abilities, buying our 2V0-13.25 Study Materials can help you pass the test smoothly. You will acquire a lot of knowledge to make you more learned and enhance your working abilities in some certain area.
