## Salesforce Sample Questions (Q155-Q160):

### NEW QUESTION # 155

Universal Containers を使用すると、顧客は Salesforce コミュニティにログインし、カスタム Visualforce ページ経由で注文を更新できます。Universal Containers の営業担当者は、同じ Visualforce ページで注文を編集できます。Visualforce ページでレコード共有が強制されていることをテストするには、開発者は Apex テストクラスで何を使用する必要がありますか？

- A. システムを使用します。profiles1h=() 営業担当者およびコミュニティ ユーザーとしてテストします。
- B. システムを使用します。profiles=() 営業担当者およびコミュニティ ユーザーとしてテストします。
- C. システムを使用します。管理者およびコミュニティ ユーザーとしてテストするには、runAs() を実行します。
- D. システムを使用します。profiles() を使用して、管理者およびコミュニティ ユーザーとしてテストします。

**Answer: C**

Explanation:

The System.runAs() method is used in test classes to enforce record sharing. This method allows you to write test methods that change user contexts to ensure that the proper record sharing is enforced. References:

### NEW QUESTION # 156

以下のコードを参照してください。

Lightning Web コンポーネント JS ファイル

JavaScript

```
import {LightningElement} from 'lwc';
import serverEcho from '@salesforce/apex/SimpleServerSideController.serverEcho'; export default class Helloworld extends LightningElement { firstName = 'world'; handleClick() { serverEcho({ firstName: this.firstName })
}}
.then((result)=> {
alert('From server: ' + result);
})
.catch((error)=> {
console.error(error);
});
}
```

Apex Controller

Java

```
public with sharing class SimpleServerSideController {
@AuraEnabled
public static String serverEcho(sObject firstName) {
String firstNameStr = (String)firstName.get('firstName');
return ('Hello from the server, ' + firstNameStr);
}
}
```

上記のコードでは、コードを機能させるために Apex コントローラでどのような 2 つの変更を加える必要がありますか？

- A. Apex コントローラから行 06 を削除し、代わりに行 07 の戻り値で firstName を使用します。
- B. Apex コントローラの行 05 の引数を sObject から String に変更します。
- C. 単一のメソッドではなく、クラス全体に @AuraEnabled としてアノテーションを付けます。
- D. メソッド シグネチャを public static ではなく global static に変更します。

**Answer: A,B**

#### Explanation:

The current Apex controller implementation contains a type mismatch between the data being sent from the JavaScript controller and the data type expected by the Apex method. In the JavaScript file, this.firstName is initialized as the string 'world'. When the serverEcho method is invoked, it passes this string value under the key firstName.

In the Apex Controller, the parameter is incorrectly defined as an sObject. Because the JavaScript is passing a simple string, the Apex method signature must be updated to accept a String (Option B). Consequently, line

06-which attempts to use the .get() method (a method specific to sObjects)-is no longer valid and should be removed. Instead, the developer should directly use the firstName variable in the return statement (Option C).

Option A is incorrect because @AuraEnabled is a method-level annotation, not a class-level one. Option D is incorrect because public static is the sufficient and standard access modifier for Apex methods exposed to Lightning components; global is only necessary if the component resides in a different namespace (such as in a managed package). By aligning the data types between the two layers, the serialization process can correctly map the JavaScript string to the Apex string variable.

#### NEW QUESTION # 157

開発者はビジネスロジックコードが機能していますが、テストクラスで次のエラーが発生します。

コミットされていない保留中の作業があります。コミットしてください

または、コールする前にロールバックします。

考えられる解決策は何でしょうか？

- A. コールアウトに @TestVisible を設定してビジネスロジックとテストクラスを書き換えます。
- B. マストを使用します。テスト実行でコールアウトをバイパスする前に、T=RunningTest={};
- C. コードは実際には当てはまらないため、テストクラスの先頭で seeAllData を true に設定します。
- D. 外部コードエラーである可能性が高いため、ターゲットエンドポイントについてサポートに問い合わせてください。

#### Answer: C

#### Explanation:

The error "You have uncommitted work pending. Please commit or rollback before calling out" usually indicates that DML operations (like insert, update, delete) are being performed before a callout in a test context. This is not allowed because Salesforce does not support this sequence of operations in a single transaction. However, the use of seeAllData=true is generally not a recommended practice and does not address the core issue of mixed DML and callouts in tests. The correct solution is to use a mocking framework to simulate the callout response. By using Test.setMock(), developers can avoid performing actual callouts in test methods, thus bypassing the uncommitted work error.

- A. REST POST を実行して Order\_c を更新し、アカウントの Customer\_Number\_c を指定します。
- B. REST PATCH を実行して Order\_c をアップデートし、その中にアカウントの Customer\_Number\_c を指定します。
- C. Account に対して REST GET を実行し、REST PATCH を実行して、Order\_c を Accounts レコード ID で upsert します。
