

Certification MuleSoft-Integration-Architect-I Exam Dumps - MuleSoft-Integration-Architect-I Cert Exam

BTW, DOWNLOAD part of Exam4Labs MuleSoft-Integration- Architect-I dumps from Cloud Storage:
https://drive.google.com/open?id=1fctmgww270GXz_LniZIN932Au5Ey5KVU

With our MuleSoft-Integration-Architect-I training braindumps, you must feel respected. We believe that every individual has his or her own will, and we will not force you to make any decision. What we can do is to make our MuleSoft-Integration-Architect-I learning prep perfect as much as possible, and let our MuleSoft-Integration-Architect-I practice quiz conquer you with your own charm. And there are three versions of the MuleSoft-Integration-Architect-I exam questions: the PDF, Software and APP online which you can choose as you like.

We know deeply that a reliable MuleSoft-Integration-Architect-I exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our MuleSoft-Integration-Architect-I latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient MuleSoft-Integration-Architect-I study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our MuleSoft-Integration-Architect-I exam material (only about 20 to 30 hours practice).

MuleSoft-Integration-Architect-I Cert Exam, MuleSoft-Integration-Architect-I 100% Accuracy

One advantage is that if you use our MuleSoft-Integration-Architect-I practice questions for the first time in a network environment, then the next time you use our study materials, there will be no network requirements. You can open the MuleSoft-Integration-Architect-I real exam anytime and anywhere. It means that it can support offline practicing. And our MuleSoft-Integration-Architect-I learning braindumps are easy to understand for the questions and answers are carefully compiled by the professionals.

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q42-Q47):

NEW QUESTION # 42

A manufacturing company plans to deploy Mule applications to its own Azure Kubernetes service infrastructure. The organization wants to make

the Mule applications more available and robust by deploying each Mule application to an isolated Mule runtime in a Docker container while managing all the Mule applications from the MuleSoft-hosted control plane. What choice of runtime plane meets these organizational requirements?

- A. Customer-hosted self-provisioned runtime plane
- **B. Anypoint Runtime Fabric**
- C. CloudHub 2.0
- D. Anypoint Service Mesh

Answer: B

Explanation:

Anypoint Runtime Fabric is the appropriate choice for deploying Mule applications in an isolated Mule runtime within Docker containers on an Azure Kubernetes Service (AKS) infrastructure. This solution provides a containerized and orchestrated environment managed from the MuleSoft-hosted control plane. It enhances the availability, scalability, and robustness of Mule applications by allowing fine-grained control over deployments and providing built-in support for high availability and fault tolerance.

References:

- * Anypoint Runtime Fabric Overview
- * Deploying Mule Applications to Kubernetes

NEW QUESTION # 43

Insurance organization is planning to deploy Mule application in MuleSoft Hosted runtime plane. As a part of requirement , application should be scalable , highly available. It also has regulatory requirement which demands logs to be retained for at least 2 years. As an Integration Architect what step you will recommend in order to achieve this?

- A. Logging strategy should be configured accordingly in log4j file deployed with the application.
- **B. It is not possible to store logs for 2 years in CloudHub deployment. External log management system is required.**
- C. When deploying an application to CloudHub , logs retention period should be selected as 2 years
- D. When deploying an application to CloudHub, worker size should be sufficient to store 2 years data

Answer: B

Explanation:

Correct answer is It is not possible to store logs for 2 years in CloudHub deployment. External log management system is required. CloudHub has a specific log retention policy, as described in the documentation: the platform stores logs of up to 100 MB per app & per worker or for up to 30 days, whichever limit is hit first. Once this limit has been reached, the oldest log information is deleted in chunks and is irretrievably lost. The recommended approach is to persist your logs to a external logging system of your choice (such as Splunk, for instance) using a log appender. Please note that this solution results in the logs no longer being stored on our platform, so any support cases you lodge will require for you to provide the appropriate logs for review and case resolution

NEW QUESTION # 44

What is not true about Mule Domain Project?

- A. This allows Mule applications to share resources
- B. Expose multiple services within the Mule domain on the same port
- **C. Only available Anypoint Runtime Fabric**
- D. Send events (messages) to other Mule applications using VM queues

Answer: C

Explanation:

- * Mule Domain Project is ONLY available for customer-hosted Mule runtimes, but not for Anypoint Runtime Fabric
- * Mule domain project is available for Hybrid and Private Cloud (PCE). Rest all provide application isolation and can't support domain project.

What is Mule Domain Project?

- * A Mule Domain Project is implemented to configure the resources that are shared among different projects.

These resources can be used by all the projects associated with this domain. Mule applications can be associated with only one domain, but a domain can be associated with multiple projects. Shared resources allow multiple development teams to work in

parallel using the same set of reusable connectors. Defining these connectors as shared resources at the domain level allows the team to:

- Expose multiple services within the domain through the same port.
- Share the connection to persistent storage.
- Share services between apps through a well-defined interface.
- Ensure consistency between apps upon any changes because the configuration is only set in one place.

* Use domains Project to share the same host and port among multiple projects. You can declare the http connector within a domain project and associate the domain project with other projects. Doing this also allows to control thread settings, keystore configurations, time outs for all the requests made within multiple applications. You may think that one can also achieve this by duplicating the http connector configuration across all the applications. But, doing this may pose a nightmare if you have to make a change and redeploy all the applications.

* If you use connector configuration in the domain and let all the applications use the new domain instead of a default domain, you will maintain only one copy of the http connector configuration. Any changes will require only the domain to be redeployed instead of all the applications.

You can start using domains in only three steps:

- 1) Create a Mule Domain project
- 2) Create the global connector configurations which needs to be shared across the applications inside the Mule Domain project
- 3) Modify the value of domain in mule-deploy.properties file of the applications Graphical user interface Description automatically generated

NEW QUESTION # 45

An organization currently uses a multi-node Mule runtime deployment model within their datacenter, so each Mule runtime hosts several Mule applications. The organization is planning to transition to a deployment model based on Docker containers in a Kubernetes cluster. The organization has already created a standard Docker image containing a Mule runtime and all required dependencies (including a JVM), but excluding the Mule application itself.

What is an expected outcome of this transition to container-based Mule application deployments?

- **A. Required redesign of Mule applications to follow microservice architecture principles**
- B. Required change to the URL endpoints used by clients to send requests to the Mule applications
- C. Guaranteed consistency of execution environments across all deployments of a Mule application
- D. Required migration to the Docker and Kubernetes-based Anypoint Platform - Private Cloud Edition

Answer: A

Explanation:

* Organization can continue using existing load balancer even if backend application changes are there. So option A is ruled out.

* As Mule runtime is within their datacenter, this model is RTF and not PCE. So option C is ruled out.

Mule runtime deployment model within their datacenter, so each Mule runtime hosts several Mule applications -- This mean PCE or Hybrid not RTF - Also mentioned in Question is that - Mule runtime is hosting several Mule Application, so that also rules out RTF and as for hosting multiple Application it will have Domain project which need redesign to make it microservice architecture

NEW QUESTION # 46

A gaming company has implemented an API as a Mule application and deployed the API implementation to a CloudHub 2.0 private space. The API implementation must connect to a mainframe application running in the customer's on-premises corporate data center and also to a Kafka cluster running in an Amazon AWS VPC.

What is the most efficient way to enable the API to securely connect from its private space to the mainframe application and Kafka cluster?

- A. In the AWS account, attach the private space directly to the AWS VPC, In the AWS account, use an AWS transit gateway to route from the AWS VPC to the on-premises data center.
□
- B. In the AWS account, attach the CloudHub 2.0 private space to an AWS transit gateway that routes from the CloudHub 2.0 private space to the on-premises data center. In Runtime Manager, configure an Anypoint VPN to route from the CloudHub 2.0 private space to the AWS VPC.
□
- C. In Runtime Manager, configure an Anypoint VPN to route from the CloudHub 2.0 private space to the on-premises data center. In the AWS account, attach the private..
□
- **D. In Runtime Manager, set up VPC peering between the CloudHub 2.0 private network and the on-premises data center. In the AWS account, set up VPC peering between the AWS VPC and the CloudHub 2.0 private network.**

□
Answer: D

NEW QUESTION # 47

.....

We are so popular for that we have a detailed and perfect customer service system. Firstly, only 5 to 10 minutes after the customer's online payment of MuleSoft-Integration-Architect-I actual exam is successful, you can receive an email from the customer service and immediately start learning. We also have dedicated staff to check and update MuleSoft-Integration-Architect-I Exam Questions every day, so you can get the latest information of MuleSoft-Integration-Architect-I exam materials whenever you buy it. Secondly, we provide 24-hour round-the-clock service to customers. We can solve any problems about MuleSoft-Integration-Architect-I study materials for you whenever and wherever you need it.

MuleSoft-Integration-Architect-I Cert Exam: <https://www.exam4labs.com/MuleSoft-Integration-Architect-I-practice-torrent.html>

Our MuleSoft-Integration-Architect-I pdf dumps will offer an answer to this question and stretch out a helpful hand to them, Now you can trust Exam4Labs MuleSoft-Integration-Architect-I practice questions and start preparation without wasting further time, Salesforce Certification MuleSoft-Integration-Architect-I Exam Dumps As old saying goes, time and tide wait no man, Salesforce Certification MuleSoft-Integration-Architect-I Exam Dumps Our team of professionals is highly qualified and have years of experience in the industry, Examcollection Salesforce MuleSoft-Integration-Architect-I PDF has all Real Exam Questions.

Isolating Physical Layer Issues, You dive into contexts, discovering how to build and draw into them, Our MuleSoft-Integration-Architect-I Pdf Dumps will offer an answer to this question and stretch out a helpful hand to them.

Certification MuleSoft-Integration-Architect-I Exam Dumps | High Pass-Rate MuleSoft-Integration-Architect-I: Salesforce Certified MuleSoft Integration Architect I 100% Pass

Now you can trust Exam4Labs MuleSoft-Integration-Architect-I practice questions and start preparation without wasting further time, As old saying goes, time and tide wait no man, Our team MuleSoft-Integration-Architect-I of professionals is highly qualified and have years of experience in the industry.

Examcollection Salesforce MuleSoft-Integration-Architect-I PDF has all Real Exam Questions.
