### NEW QUESTION # 65

What is the purpose of splitting documents into smaller overlapping chunks in a RAG system?

- A. To enable the matching of different relevant passages to user queries**
- B. To improve the efficiency of encoding queries into vector representations
- C. To reduce the storage space required for the vector database
- D. To simplify the process of training the embedding model

**Answer: A**

#### Explanation:

In Retrieval-Augmented Generation (RAG) systems, splitting documents into smaller overlapping chunks is a crucial preprocessing step that enhances the system's ability to match relevant passages to user queries.

#### 1. Purpose of Splitting Documents into Smaller Overlapping Chunks:

\* Improved Retrieval Accuracy: Dividing documents into smaller, manageable segments allows the system to retrieve the most relevant chunks in response to a user query, thereby improving the precision of the information provided.

\* Context Preservation: Overlapping chunks ensure that contextual information is maintained across segments, which is essential for understanding the meaning and relevance of each chunk in relation to the query.

#### 2. Benefits of This Approach:

\* Enhanced Matching: By having multiple overlapping chunks, the system increases the likelihood that at least one chunk will closely match the user's query, leading to more accurate and relevant responses.

\* Efficient Processing: Smaller chunks are easier to process and analyze, enabling the system to handle large documents more effectively and respond to queries promptly.
