

# Nutanix NCP-DB-6.10 Exam Dumps Are Available At A Cheap Price

DOWNLOAD the newest BraindumpsPass NCP-DB-6.10 PDF dumps from Cloud Storage for free:  
<https://drive.google.com/open?id=15IZ311rUHLmhqx4wZ8SvDQBdJsk0GtM6>

We have experienced education technicians and stable first-hand information to provide you with high quality & efficient NCP-DB-6.10 training dumps. If you are still worried about your exam, our exam dumps may be your good choice. Our NCP-DB-6.10 training dumps cover nearly 85% real test materials so that if you master our dumps questions and answers you can clear exams successfully. Don't worry over trifles. If you purchase our NCP-DB-6.10 training dumps you can spend your time on more significant work.

The language of our NCP-DB-6.10 study materials is simple. The learners may come from many social positions and their abilities to master our NCP-DB-6.10 study materials are varied. Based on this consideration we apply the most simple and easy-to-be-understood language to help the learners no matter he or she is the students or the in-service staff, the novice or the experienced employee which have worked for many years. NCP-DB-6.10 Study Material use the simple language to explain the answers and detailed knowledge points and the concise words to show the complicated information about the NCP-DB-6.10 study material.

## Nutanix NCP-DB-6.10 Prep Guide, Exam NCP-DB-6.10 Assessment

For candidates who will buy NCP-DB-6.10 learning materials online, they may care more about the quality of the exam dumps. We have a professional team to collect the latest information of the NCP-DB-6.10 exam dumps, therefore the quality can be guaranteed. Moreover, we have online and offline chat service staff, who have professional knowledge for NCP-DB-6.10 Learning Materials. If you have any questions, you can consult us. We will give you reply as soon as possible. Free demo for NCP-DB-6.10 exam dumps will also be offered, and you can have a try before purchasing.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q252-Q257):

### NEW QUESTION # 252

Which two encryption methods can be used when configuring an SMTP server? (Choose two.)

- A. SSL
- B. S/MIME
- C. IPsec
- D. TLS

Answer: A,D

Explanation:

NDB supports SMTP server configuration for sending email notifications and alerts. SMTP server configuration requires specifying

the SMTP server address, port, username, password, and encryption method. The encryption method determines how the email messages are secured during transmission. NDB supports two encryption methods for SMTP server configuration: TLS and SSL. TLS (Transport Layer Security) is a protocol that encrypts and authenticates data between the email client and the SMTP server. TLS can operate in two modes: explicit and implicit. In explicit mode, the email client and the SMTP server negotiate the encryption method and parameters after establishing a plain text connection. This mode typically uses port 587. In implicit mode, the email client and the SMTP server assume that the connection is encrypted from the start, without any negotiation. This mode typically uses port 465.

SSL (Secure Sockets Layer) is a predecessor of TLS that also encrypts and authenticates data between the email client and the SMTP server. SSL operates in implicit mode only, and uses port

465 by default. SSL is less secure than TLS, but it is still widely used and supported by many email providers. S/MIME (Secure/Multipurpose Internet Mail Extensions) is a standard that encrypts and signs email messages at the application layer, rather than the transport layer.

S/MIME requires the use of digital certificates and public key cryptography to ensure the confidentiality and integrity of email messages. S/MIME is not a valid encryption method for SMTP server configuration, as it does not affect the connection between the email client and the SMTP server. IPsec (Internet Protocol Security) is a suite of protocols that secures IP packets at the network layer, rather than the application or transport layer. IPsec can encrypt and authenticate data between any two IP endpoints, such as routers, firewalls, or hosts. IPsec is not a valid encryption method for SMTP server configuration, as it does not apply to the specific protocol or port used by SMTP.

### NEW QUESTION # 253

An administrator would like to use Era for Copy Data Management operations on an Availability Group (AG) database. The AG database is hosted on replicas with different named instances, as shown below:

- SQLAGN1\EMR
- SQLAGN2\EMR
- SQLAGN3\DW

SQLAGN3\DW is running the Analytics service that needs real-time data. How should the administrator register the database in Era?

- A. Register the database as a Standalone database,
- **B. Register the database as an Availability database.**
- C. Register the SQLAGN3 from AG cluster and register the database as Availability database,

**Answer: B**

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, when dealing with an Availability Group (AG) database, the database should be registered as an Availability database. This is because the AG database is hosted on replicas with different named instances, and registering it as an Availability database allows for Copy Data Management operations to be performed across all instances. This is particularly important when services such as the Analytics service running on SQLAGN3\DW require real-time data.

### NEW QUESTION # 254

What is the minimum frequency in minutes configurable for NDB Log Catch-up operation?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

The minimum frequency configurable for the NDB Log Catch-up operation is 15 minutes. This setting determines how frequently the log catch-up process runs, which is crucial for maintaining data integrity and ensuring up-to-date database states.

### NEW QUESTION # 255

An administrator needs to enable multi-cluster to setup NDB HA. What should the administrator configure for the NDB Agent to

satisfy this requirement?

- A. Static VLAN
- B. Name Prefix
- C. Compute Profile
- **D. Network Profile**

**Answer: D**

Explanation:

To enable multi-cluster setup for NDB High Availability (HA), the administrator must configure the NDB Agent with a Network Profile. A Network Profile defines the networking settings (e.g., VLANs, IP ranges) that the NDB Agent uses to communicate across clusters. This is critical for multi-cluster HA, as it ensures consistent network configuration for replication, failover, and data synchronization between clusters. The Network Profile must be properly configured to handle inter-cluster traffic and latency requirements (e.g., <25ms RTT).

#### **NEW QUESTION # 256**

An administrator needs to replace the default Nutanix self-signed certificates in Era. Which SSL Certificate file format is supported?

- **A. Base-64 encoded X.509**
- B. PKCS#12
- C. PKCS#7
- D. DER encoded binary X.509

**Answer: A**

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era supports x509 certificates in Base-64 encoded PEM format. This format is used when an administrator needs to replace the default Nutanix self-signed certificates in Era.

#### **NEW QUESTION # 257**

.....

There are three different versions of our NCP-DB-6.10 study materials including PDF, App and PC version. Each version has the suitable place and device for customers to learn anytime, anywhere. In order to give you a basic understanding of our various versions, each version offers a free trial. The PDF version of NCP-DB-6.10 study materials supports download and printing, so its trial version also supports. You can learn about the usage and characteristics of our NCP-DB-6.10 Study Materials in various trial versions, so as to choose one of your favorite in formal purchase. In fact, all three versions contain the same questions and answers.
