Pass Guaranteed Quiz Latest Microsoft - Reliable AZ-500 Test Guide

There are many advantages of our Microsoft AZ-500 pdf torrent: latest real questions, accurate answers, instantly download and high passing rate. You can totally trust our Microsoft AZ-500 Practice Test because all questions are created based on the requirements of the certification center.

Microsoft Azure Security Technologies Sample Questions (Q333-Q338):

NEW QUESTION # 333

You have Azure virtual machines that have Update Management enabled. The virtual machines are configured as shown in the following table.

☐ You schedule two update deployments named Update1 and Update2. Update1 updates VM3. Update2 updates VM6.

Which additional virtual machines can be updated by using Update1 and Update2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

☐

Explanation:

Update1: VM1 and VM2 only

VM3: Windows Server 2016 West US RG2

Update2: VM4 and VM5 only

VM6: CentOS 7.5 East US RG1

For Linux, the machine must have access to an update repository. The update repository can be private or public.

NEW QUESTION # 334

You need to deploy AKS1 to meet the platform protection requirements.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Explanation:

Scenario: Azure AD users must be able to authenticate to AKS1 by using their Azure AD credentials.

Litewire plans to deploy AKS1, which is a managed AKS (Azure Kubernetes Services) cluster.

Step 1: Create a server application

To provide Azure AD authentication for an AKS cluster, two Azure AD applications are created. The first application is a server component that provides user authentication.

Step 2: Create a client application

The second application is a client component that's used when you're prompted by the CLI for authentication. This client application uses the server application for the actual authentication of the credentials provided by the client.

Step 3: Deploy an AKS cluster.

Use the `az group create` command to create a resource group for the AKS cluster.

Use the `az aks create` command to deploy the AKS cluster.

Step 4: Create an RBAC binding.

Before you use an Azure Active Directory account with an AKS cluster, you must create role-binding or cluster role-binding. Roles define the permissions to grant, and bindings apply them to desired users. These assignments can be applied to a given namespace, or across the entire cluster.

NEW QUESTION # 335

You have an Azure subscription named Subscription1 that contains the resources shown in the following table.

You have an Azure subscription named Subscription2 that contains the following resources:

- * An Azure Sentinel workspace

- * An Azure Event Grid instance

You need to ingest the CEF messages from the NVAs to Azure Sentinel.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 336

You have an Azure subscription named Sub1.

You create a virtual network that contains one subnet. On the subnet, you provision the virtual machines shown in the following table.

Currently, you have not provisioned any network security groups (NSGs).

You need to implement network security to meet the following requirements:

- * Allow traffic to VM4 from VM3 only.
- * Allow traffic from the Internet to VM1 and VM2 only.
- * Minimize the number of NSGs and network security rules.

How many NSGs and network security rules should you create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NSGs: 2

Network security rules: 3

Not 2: You cannot specify multiple service tags or application groups in a security rule.

NEW QUESTION # 337

You have an Azure subscription that contains a resource group named RG1. RG1 contains a virtual machine named VM1 that uses Azure Active Directory (Azure AD) authentication.

You have two custom Azure roles named Role1 and Role2 that are scoped to RG1.

The permissions for Role1 are shown in the following JSON code.

The permissions for Role2 are shown in the following JSON code.

You assign the roles to the users shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 338

.....

This professionally designed desktop practice exam software is customizable, which helps you to adjust timings and questions of the mock tests. This feature of Windows-based Microsoft Azure Security Technologies software helps you improve time-management abilities and weak areas of the test preparation. We regularly upgrade this Microsoft AZ-500 Practice Exam software after receiving valuable feedback from experts worldwide.
