

Latest MTCNA Dumps Ebook - MTCNA VCE Dumps

BONUS!!! Download part of PassLeader MTCNA dumps for free: https://drive.google.com/open?id=1Uwv6Bwn_bAhu69CA-f0LWTnL_WTKtAO

It is all due to the top features of MikroTik Certified Network Associate Exam MTCNA exam dumps. These features are three MikroTik Certified Network Associate Exam exam questions formats, free exam dumps download facility, three months updated Salesforce MTCNA exam dumps download facility, affordable price and 100 exams passing money back guarantee. All these MikroTik Certified Network Associate Exam dumps features are designed to assist you in MikroTik Certified Network Associate Exam MTCNA Exam Preparation and enable you to pass the exam with flying colors.

MikroTik MTCNA (MikroTik Certified Network Associate) Certification Exam is a globally recognized accreditation that validates the skills and knowledge of network engineers and IT professionals in MikroTik routers and networking technologies. MTCNA Exam is designed to assess the candidates' understanding of MikroTik RouterOS software and their ability to configure, troubleshoot, and manage network infrastructures.

Exam MTCNA braindumps

Obtaining a certificate may be not an easy thing for some candidates, choose us, we will help you get the certificate easily. MTCNA learning materials are edited by experienced experts, therefore the quality and accuracy can be guaranteed. In addition, MTCNA exam braindumps contact most of knowledge points for the exam, and you can master the major knowledge points well by practicing. In order to improve your confidence to MTCNA Exam Materials, we are pass guarantee and money back guarantee. If you fail to pass the exam by using MTCNA exam materials, we will give you full refund.

MikroTik MTCNA Certification is a valuable credential for network professionals seeking to advance their careers in the networking industry. MikroTik Certified Network Associate Exam certification validates that the candidate has the necessary knowledge and skills to deploy and manage MikroTik networks effectively. MikroTik Certified Network Associate Exam certification is recognized globally and provides opportunities for professionals to work in different industries such as telecommunications, internet service providers, and data centers.

MikroTik Certified Network Associate Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

What kind of users are listed in the Secrets window of the PPP menu?

- A. pppoe users
- B. pptp users
- C. winbox users
- D. Hot-Spot users
- E. 12tp users

- F. wireless users

Answer: A,B,E

NEW QUESTION # 87

For a Simple Queue to apply bandwidth restrictions on a bridged interface, the following must be done:

- A. Associate the Simple Queue to the bridge interface
- B. **Enable 'Use IP Firewall' in bridge settings**
- C. Use mangle to mark the connections
- D. Configure an IP address on the bridge interface

Answer: B

Explanation:

By default, RouterOS does not pass traffic on a bridge interface through the firewall or queue system. If you want to apply queueing (Simple Queues or other policies) on a bridge interface, you must enable the bridge to use the IP Firewall.

MTCNA Official Course Material - Bridging & IP Firewall Integration:

"If you want to apply queues or firewall rules to traffic flowing through a bridge, you must enable 'use-ip-firewall' under the bridge settings." Rene Meneses MTCNA Guide - Bridge Queuing Section:

"Simple Queues do not affect bridged traffic unless you activate the 'Use IP Firewall' setting in bridge configuration. This pushes the packets through the normal firewall and queueing engine." MikroTik Wiki - Bridge Settings:

"If use-ip-firewall is enabled, then all bridged traffic is also processed by firewall and queues." Options A and C are incorrect because assigning an IP or linking the queue alone does not enforce restrictions at Layer 2.

Option B refers to advanced queueing with mangle + Queue Trees, not Simple Queues.

NEW QUESTION # 88

What is a stub network?

- **A. A network that has only one entry and exit point.**
- B. A network with more than one exit and entry point.
- C. A network with only one entry and no exit point.
- D. A network with more than one exit point.

Answer: A

Explanation:

A stub network is defined as a network segment that is accessible by only one path (single entry/exit point). It does not serve as a transit network for routing between other networks. Traffic entering or leaving the stub network must pass through a single interface.

MTCNA Course Material - Routing Concepts:

"A stub network is one that is connected to the rest of the network by a single router interface. It has only one entry and one exit point." Rene Meneses MTCNA Study Guide - Routing Terms:

"Stub networks do not forward packets for other networks. They are endpoints with one route in and out." Other options:

- * A/B: Describe transit networks, not stub
- * C: Misleading-stub has both entry and exit, but only through one path
- * D:#Correct definition

NEW QUESTION # 89

There are two wireless cards (wlan1 and wlan2) which are bridged together. On wlan1 card there is a setting "Forwarding=no". Choose the correct answer(s):

- A. Stations on wlan1 will be able to communicate with stations on wlan2
- B. Stations on wlan2 will be able to communicate with stations on wlan1
- **C. Stations on wlan2 will be able to communicate with stations on wlan2**
- **D. Stations on wlan1 will be able to communicate with stations on wlan1**
- E. To prevent communication between wlan1 and wlan2 one cannot use Bridge Filters

Answer: C,D

Explanation:

Setting "forwarding=no" on a wireless interface prevents communication between connected clients on that interface and between that interface and other interfaces in the same bridge. This means:

- * Stations connected to wlan1 cannot talk to each other
- * Stations on wlan1 cannot talk to stations on wlan2 (even if bridged)
- * Stations on wlan2 can talk to each other normally

Evaluation:

- * A.#Correct - forwarding=no does not affect wlan2
- * B.#Incorrect - forwarding=no blocks this
- * C.#Correct - clients on wlan1 cannot talk to each other either
- * D.#Bridge filters can be used but this scenario is about forwarding settings
- * E.#Blocked by forwarding=no

MTCNA Wireless Module - Wireless Forwarding Behavior:

"Forwarding=no disables client-to-client communication on the interface and across bridges." Rene Meneses Study Guide - Wireless Access Config:

"Use forwarding= no to isolate clients on the same AP. Affects bridging too." Terry Combs Notes - Wireless Isolation:

"Setting forwarding=no isolates all clients on that wireless card."

NEW QUESTION # 90

Which firewall chain should you use to filter ICMP packets from the router itself?

- A. postrouting
- B. forward
- C. input
- D. output

Answer: C

NEW QUESTION # 91
