The CWNP modern job market is becoming more and more competitive and challenging and if you are not ready for it then you cannot pursue a rewarding career. Take a smart move right now and enroll in the Certified Wireless IoT Solutions Administrator(2025 Edition) (CWISA-103) certification exam and strive hard to pass the Certified Wireless IoT Solutions Administrator(2025 Edition) (CWISA-103) certification exam. The Certified Wireless IoT Solutions Administrator(2025 Edition) (CWISA-103) certification exam offers you a unique opportunity to learn new in-demand skills and knowledge.

With all this reputation, our company still take customers first, the reason we become successful lies on the professional expert team we possess , who engage themselves in the research and development of our CWISA-103 learning guide for many years. So we can guarantee that our CWISA-103 exam materials are the best reviewing material. Concentrated all our energies on the study CWISA-103 learning guide we never change the goal of helping candidates pass the exam. Our CWISA-103 test questions' quality is guaranteed by our experts' hard work. So what are you waiting for? Just choose our CWISA-103 exam materials, and you won't be regret.

We have installed the most advanced operation system in our company which can assure you the fastest delivery speed on our CWISA-103 learning guide, you can get immediately our CWISA-103 training materials only within five to ten minutes after

purchase after payment. At the same time, there is really no need for you to worry about your personal information if you choose to buy the CWISA-103 Exam Practice from our company.

CWNP Certified Wireless IoT Solutions Administrator(2025 Edition) Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which wireless technology is MOST appropriate for low-power sensors that must operate for multiple years on a coin-cell battery?

- A. Wi-Fi 6
- B. Bluetooth Classic
- C. LoRaWAN
- D. Zigbee

Answer: C

Explanation:

LoRaWAN is optimized for extremely low power consumption and long-range communication, allowing sensors to operate for years on small batteries. Wi-Fi and Bluetooth Classic consume too much power, and Zigbee, although low-power, does not match LoRaWAN's battery longevity.

NEW QUESTION # 39

Among these choices, what is the most common reason administrators use scripting during the deployment of a wireless solution?

- A. To increase the signal strength of the resulting wireless links
- B. To enhance the capabilities of the resulting solution
- C. To reduce configuration errors
- D. To provide time for playing solitaire

Answer: C

Explanation:

Automation for Consistency: Scripts eliminate the potential for human error during repetitive configuration tasks on multiple devices. This ensures uniformity across the wireless solution.

Speed and Efficiency: Scripts can be much faster than manual configuration, particularly in large deployments.

NEW QUESTION # 40

What best describes a proof-of-concept implementation?

- A. A full-scale test deployment in the target environment for users to work with
- B. A demonstration provided by the manufacturer in their facility that shows the capabilities of the system
- C. A limited-scope prototype deployment in the target environment to test and demonstrate capabilities in the real world
- D. Testing for software bugs that might impact the end user

Answer: C

Explanation:

* Purpose of POC: A proof-of-concept (POC) validates the feasibility and potential value of a solution within its intended operational environment.

* Scaling: POCs are small-scale, allowing for quicker and less costly testing before committing to a full-scale deployment.

* Real-world Evaluation: Unlike manufacturer demos, a POC exposes the system to the unique variables (e.g., interference, usage patterns) present in the user's specific setting.

NEW QUESTION # 41

What is the primary difference between LoRa and LoRaWAN?

- A. LoRaWAN is the Physical Layer and LoRa is the Transport Layer
- B. LoRa Is used for communicating across the Internet and LoRaWAN is used only on the local link
- **C. LoRa is the modulation method and LoRaWAN implements the higher network layers**
- D. LoRa uses RF and LoRaWAN uses light-based communications

Answer: C

Explanation:

* LoRa: Refers to the physical layer chirp spread spectrum (CSS) modulation, enabling long-range, low- power communication.

* LoRaWAN: An open MAC layer protocol that builds on LoRa, defining network architecture, device management, and data routing for large-scale LoRa networks.

NEW QUESTION # 42

What is the primary difference between LoRa and LoRaWAN

- A. LoRa is used for communicating across the Internet and LoRaWAN is used only on the local link
- **B. LoRa is the modulation method (using CSS modulation at the Physical Layer) and LoRaWAN is the MAC sub-layer of the Data Link layer**
- C. LoRa is the Physical Layer and LoRaWAN is the Transport Layer
- D. LoRa uses RF and LoRaWAN uses light-based communications

Answer: B

Explanation:

* LoRa: This refers to the underlying radio modulation technique using Chirp Spread Spectrum (CSS). It defines how data is physically encoded onto the wireless signal.

* LoRaWAN: This is the network protocol built on top of LoRa. It manages device communication, network topology, and aspects like security. It operates at the MAC sublayer of the Data Link layer (Layer 2) of the OSI model

* LoRa vs. LoRaWAN: Key takeaway is that LoRa is the physical layer technology, while LoRaWAN adds the networking layer for management.

References:

LoRa Modulation: Technical explanations of Chirp Spread Spectrum (CSS).

LoRaWAN Specification: Official documentation detailing the network architecture and MAC layer functions.

OSI Model: Descriptions of the Data Link layer and its role in networking.

NEW QUESTION # 43
