P.S. Free & New D-ISM-FN-01 dumps are available on Google Drive shared by Pass4SureQuiz: <https://drive.google.com/open?id=1M2OGqZPjp0gsjou-vXbR8OIEziMRaHI>

Our products are the accumulation of professional knowledge worthy practicing and remembering. There are so many specialists who join together and contribute to the success of our D-ISM-FN-01 guide quiz just for your needs. Our responsible and patient staff who has being trained strictly before get down to business and interact with customers. Once you have practiced and experienced the quality of our D-ISM-FN-01 Exam Preparation, you will remember the serviceability and usefulness of them. It explains why our D-ISM-FN-01 practice materials helped over 98 percent of exam candidates get the certificate you dream of successfully. Believe me you can get it too.

Our Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) exam dumps are top-notch and designed to help students pass the Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) test on the first try. Pass4SureQuiz offers three formats of preparation material for the D-ISM-FN-01 exam: EMC D-ISM-FN-01 Pdf Dumps format, desktop-based D-ISM-FN-01 practice exam software, and web-based Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) practice test. These D-ISM-FN-01 exam dumps formats are designed to suit the needs of different types of students.

Sample Questions (Q25-Q30):

NEW QUESTION # 25

Question:

A company is implementing a new information security policy. They want to ensure that the policy aligns with its risk appetite, internal policies, and external regulations. Which framework can help the company achieve this goal?

- A. GDPR
- **B. GRC**
- C. ITIL
- D. COBIT

Answer: B

Explanation:

GRC stands for Governance, Risk, and Compliance. It's a comprehensive framework that helps organizations align their IT operations with business objectives, manage risks effectively, and ensure compliance with internal and external regulations.

* GDPR: A specific regulation focusing on data protection and privacy in the EU.

* COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.

* ITIL: Focuses on IT service management, not directly on governance or compliance.

NEW QUESTION # 26

Question:

What is the main advantage of Network Attached Storage (NAS) systems over general-purpose servers?

- A. Increases data transfer speed
- B. Supports FC protocols to access files over FC-SAN
- C. Reduces the size of the object ID
- **D. Centralizes and optimizes file sharing operations**

Answer: D

Explanation:

NAS systems are purpose-built to handle file sharing and provide:

* Centralized file access for multiple clients.

* Optimized file sharing through dedicated hardware and software.

* Efficient management with file-level protocols (NFS, CIFS/SMB).

* FC protocols (Option B) are for block storage, not NAS.

* Object ID (Option C) relates to object storage, not NAS.

* Speed (Option D): While NAS can offer good speed, its main advantage is shared file access.

NEW QUESTION # 27

Question:

What is the first step in a machine learning process?

- A. Analyzing the data
- B. Selecting the type of learning
- C. Training the model
- **D. Collecting the datasets**

Answer: D

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets: Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data:Cleaning and exploring data for patterns.

3##Selecting learning type:Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model:Using the data to build predictive models.

NEW QUESTION # 28

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. Ethernet frame segmentation
- B. FCIP gateway FC ports set to EX_Port mode
- C. FCIP gateway FC ports set to TE_Port mode
- **D. IP packet segmentation**

Answer: D

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

* TE_Port mode is used for trunking, not related to packet fragmentation.

* EX_Port mode is used for inter-switch connectivity (FCR).

* Ethernet frame segmentation is not relevant in FCIP tunneling.

NEW QUESTION # 29

Question:

A storage system uses SSDs as a secondary cache tier in front of traditional hard drives. What is the primary goal of this configuration?

- A. To reduce power consumption
- B. To simplify data backup
- **C. To improve read performance**
- D. To increase storage capacity

Answer: C

Explanation:

Using SSDs as a secondary cache (sometimes called a "flash cache") helps:

Improve read performance by storing frequently accessed data in the faster SSDs.

Reduce latency for read requests because SSDs are much faster than traditional spinning hard drives (HDDs).

* Power consumption (A): SSDs do use less power, but the primary goal here is performance.

* Data backup (C): SSD cache doesn't impact backup operations.

* Storage capacity (D): This is not the main focus; the SSDs act as a cache layer only.
