The best Exam 300-415 Preparation – The Latest Valid Study Materials for Cisco 300-415

Many customers may be doubtful about our price. The truth is our price is relatively cheap among our peer. The inevitable trend is that knowledge is becoming worthy, and it explains why good 300-415 resources, services and data worth a good price. We always put our customers in the first place. Thus we offer discounts from time to time, and you can get 50% discount at the second time you buy our 300-415 question dumps after a year. Lower price with higher quality, that's the reason why you should choose our 300-415 prep guide.

Cisco 300-415 certification exam is designed to certify the knowledge and skills required to implement and manage Cisco SD-WAN solutions. 300-415 exam is intended for network engineers, network administrators, and network architects who are responsible for deploying and managing SD-WAN solutions in their organizations. 300-415 Exam Tests the candidate's ability to

configure, troubleshoot, and optimize SD-WAN solutions using Cisco's Viptela and IOS XE platforms.

Cisco Implementing Cisco SD-WAN Solutions Sample Questions (Q290-Q295):

NEW QUESTION # 290

What is the advantage of installing the controller on-premises?

- A. scalability and a cost-saving
- B. full control of the data plane and the control plane
- C. automatic geographical redundancy and security
- D. ease of deployment and management

Answer: B

Explanation:

Key benefices of on-premise systems

Greater security and privacy: On-premise systems are installed and operated on your premises,

so your data is always kept secure and private, as long as you harden your platform and keep them up to date.

More control and customization: On-premise systems give you more control over your security

system. You can customize it to meet your specific needs and requirements, whereas Cloud-based systems are more limited in customization options.

Higher performance: On-premise systems typically have higher performance than Cloud-based

systems, as they don't rely on the Internet connection or power outages.

Increased reliability: On-premise systems are less likely to experience downtime due to Internet

connection issues, as they don't rely on the Cloud for their functionality.

Disadvantages of on-premise systems

On-premise or legacy access control systems are becoming less secure every day. Legacy

systems are outdated and vulnerable to hackers who know how much time it takes for each server location or firm's IT department to have access control capabilities. Hackers can exploit these vulnerabilities because they're already familiar with the decades-old technology used in these legacy security methods, making them an easy target.

They can be expensive to purchase and maintain

It would be best to have a dedicated IT staff to manage them.

They can be challenging to scale up or down to meet your organization's needs.

They are less flexible than cloud-based systems.

NEW QUESTION # 291

A network engineer is advertising the EIGRP learned route to Overlay Management Protocol (OMP) in the SD-WAN network. Which configuration accomplishes this task?

```
config-transaction
sdwan
address-family omp
advertise eigrp
!
```

- A. ☐
- B. ☐
- C. ☐
- D. ☒

Answer: D

NEW QUESTION # 292

Which two algorithms authenticate a user when configuring SNMPv3 monitoring on a WAN Edge router? (Choose two.)

- A. AES-256
- B. SHA-1

- C. SHA-2
- D. MDS
- E. AES-128

Answer: C,D

Explanation:

Configure SNMPv3

To configure SNMPv3, in SNMP Version, click V3. For SNMPv3, you can configure groups, users, and trap information. Configure groups and trap information as described above.

To configure SNMPv3 users, in the User section, click Add New User and enter the following parameters:

Parameter Name	Description
User	Enter a name of the SNMP user. It can be 1 to 32 alphanumeric characters.
Authentication Protocol	Select the authentication mechanism for the user: • MD5—Use message digest 5. • SHA—Use SHA-2 message digest.

NEW QUESTION # 293

Which two architectural components are part of an SD-WAN high availability vManage cluster?
(Choose two.)

- A. application server
- B. WAN Edge router
- C. network configuration system
- D. NAT router
- E. messaging server

Answer: A,E

NEW QUESTION # 294

Which value of the IPsec rekey timer must be set by the engineer for an OMP graceful restart value set for 24 hours?

- A. 48 hours
- B. 12 hours
- C. 36 hours
- D. 6 hours

Answer: B

NEW QUESTION # 295
