

# Exam E\_S4CPE\_2405 Exercise, Practice E\_S4CPE\_2405 Tests

Are you an exam jittering? Are you like a cat on hot bricks before your driving test? Do you have put a test anxiety disorder? If your answer is yes, we think that it is high time for you to use our E\_S4CPE\_2405 Exam Question. Our study materials have confidence to help you pass exam successfully and get related certification that you long for, and we can guarantee that if you don't pass the exam, we will give you full refund.

You can also trust Pass4guide E\_S4CPE\_2405 exam practice questions and start preparation with complete peace of mind and satisfaction. The E\_S4CPE\_2405 Exam Questions are designed and verified by experienced and renowned SAP exam trainers. They work collectively and strive hard to ensure the top quality of E\_S4CPE\_2405 Exam Practice questions all the time.

## SAP Exam E\_S4CPE\_2405 Exercise: SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition - Pass4guide Test Engine Simulation

Our company keeps pace with contemporary talent development and makes every learners fit in the needs of the society. Based on advanced technological capabilities, our E\_S4CPE\_2405 study materials are beneficial for the masses of customers. Our experts have plenty of experience in meeting the requirement of our customers and try to deliver satisfied E\_S4CPE\_2405 Exam guides to them. Our E\_S4CPE\_2405 exam prepare is definitely better choice to help you go through the test.

## SAP E\_S4CPE\_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Introduction to Cloud Computing and SAP Cloud ERP Deployment Options: This section of the exam measures skills of cloud solution architects and focuses on the fundamentals of cloud computing, along with the different deployment models available for SAP Cloud ERP. It addresses the benefits, challenges, and selection criteria for choosing the most suitable deployment option in alignment with business goals.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.</li> </ul>

## SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q47-Q52):

### NEW QUESTION # 47

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is Not Started
- B. When the project status is Finished
- C. When the project status is Completed
- D. When the project status is In Progress

### Answer: A

Explanation:

The data retention period in the SAP S/4HANA Migration Cockpit defines how long migrated data (e.g., in staging tables) is retained after migration. Let's analyze when this is specified:

- \* A. When the project status is In Progress: This is incorrect. Once a migration project is in progress, data loading and validation are underway, and the retention period cannot be changed-it must be set beforehand.
- \* B. When the project status is Not Started: This is correct. In the Migration Cockpit, the data retention period is specified when creating a migration project, before any activities begin (i.e., when the status is "Not Started"). This setting determines how long data remains accessible in the system (e.g., for auditing) and must be defined at the project's outset in the Fiori app.
- \* C. When the project status is Finished: This is incorrect. "Finished" is not a formal status in the Migration Cockpit, but even if interpreted as post-migration, the retention period cannot be set after migration is complete-it's a pre-migration configuration.
- \* D. When the project status is Completed: This is incorrect. Once the project is completed (i.e., data is migrated and validated), the retention period is already in effect and cannot be specified-it's locked at that point.

In summary, the data retention period is specifiedB(When the project status is Not Started).

### NEW QUESTION # 48

What can you use to migrate data to SAP S/4HANA Cloud Private Edition for a new implementation? Note: There are 3 correct answers to this question.

- A. Core data services
- B. A separate SAP HANA database
- C. A direct connection to an SAP ERP system
- D. XML or CSV templates
- E. The zero-downtime service

**Answer: B,C,D**

Explanation:

When performing a new implementation of SAP S/4HANA Cloud Private Edition, data migration can be accomplished using the following methods:

Option A: A separate SAP HANA database

This option is correct. Utilizing a separate SAP HANA database as a staging area allows for the extraction, transformation, and loading (ETL) of data from legacy systems into SAP S/4HANA Cloud Private Edition.

This approach is particularly beneficial for handling large volumes of data and complex transformations.

SAP Learning

Option B: A direct connection to an SAP ERP system

This option is correct. Establishing a direct connection between the source SAP ERP system and the target SAP S/4HANA Cloud Private Edition system enables seamless data migration. This method leverages tools like the SAP S/4HANA Migration Cockpit, which facilitates data transfer through Remote Function Calls (RFC).

SAP Learning

Option C: Core data services

This option is incorrect. Core Data Services (CDS) are primarily used for data modeling and defining views within SAP systems.

They are not designed for data migration purposes.

Option D: The zero-downtime service

This option is incorrect. The zero-downtime service is intended to minimize downtime during system upgrades or maintenance. It is not a tool or method for data migration.

Option E: XML or CSV templates

This option is correct. Using XML or CSV templates is a common method for data migration. Data from legacy systems can be exported into these templates and then imported into SAP S/4HANA Cloud Private Edition using tools like the SAP S/4HANA Migration Cockpit.

In summary, for a new implementation of SAP S/4HANA Cloud Private Edition, data migration can be effectively performed using a separate SAP HANA database, establishing a direct connection to an SAP ERP system, or utilizing XML or CSV templates. Each method offers distinct advantages depending on the specific requirements and constraints of the migration project.

#### NEW QUESTION # 49

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. SAP Cloud ALM Requirements app
- B. Integration and API List
- C. SAP Business Accelerator Hub
- D. SAP Integration Solution Advisory Methodology

**Answer: D**

#### NEW QUESTION # 50

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is Not Started
- B. When the project status is Finished
- C. When the project status is Completed
- D. When the project status is In Progress

**Answer: B**

Explanation:

In the SAP S/4HANA Migration Cockpit, the data retention period specifies how long temporary migration data is retained in the system after the migration process is completed. You set this retention period when the project status isFinished. At this stage, all migration activities are complete, and you can define how long the system should keep the temporary data before it is automatically

deleted.

Option A: When the project status is In Progress

This option is incorrect. While the project is in progress, migration activities are ongoing, and setting the data retention period at this stage is premature.

Option B: When the project status is Not Started

This option is incorrect. Before the project starts, it's too early to define the data retention period, as migration tasks have not yet commenced.

Option D: When the project status is Completed

This option is incorrect. The correct status for setting the data retention period is "Finished," not "Completed." In summary, you specify the data retention period in the SAP S/4HANA Migration Cockpit when the project status isFinished, ensuring that temporary migration data is retained for an appropriate duration after migration activities are concluded.

## NEW QUESTION # 51

What is in scope of Fit-to-Standard workshops in a new implementation? Note: There are 2 correct answers to this question.

- A. Providing feedback if changes are necessary to make the process fit the customer's needs
- B. Completing the user acceptance testing on the business processes
- C. Teaching the customer LOB experts how to navigate end-to-end business processes
- D. Estimating relative effort of the planned changes

**Answer: A,C**

Explanation:

Fit-to-Standard workshops are a cornerstone of the SAP Activate Methodology for a new implementation of SAP S/4HANA Cloud Private Edition. These workshops, conducted during the Explore phase, aim to align customer requirements with SAP's standard processes. Let's evaluate the options:

\* A. Teaching the customer LOB experts how to navigate end-to-end business processes: This is correct. A primary goal of Fit-to-Standard workshops is to educate customer line-of-business (LOB) experts on SAP S/4HANA's standard end-to-end processes (e.g., order-to-cash, procure-to-pay).

Consultants demonstrate these processes in a sandbox system, enabling customers to understand the system's capabilities and how they align with their business needs.

\* B. Estimating relative effort of the planned changes: This is incorrect. While effort estimation for gaps or customizations may occur later (e.g., in backlog prioritization), it's not a core activity of Fit-to- Standard workshops. The focus is on exploring standard processes and identifying gaps, not detailed effort planning.

\* C. Completing the user acceptance testing on the business processes: This is incorrect. User acceptance testing (UAT) occurs in the Realize or Deploy phase, not during Fit-to-Standard workshops in the Explore phase. These workshops are about analysis and alignment, not formal testing.

\* D. Providing feedback if changes are necessary to make the process fit the customer's needs: This is also correct. During the workshops, customers and consultants collaboratively assess whether the standard processes meet requirements. If gaps are identified, feedback is provided to determine necessary changes (e.g., configuration, extensions), which are then documented for the Realize phase.

In summary, the scope of Fit-to-Standard workshops in a new implementation includes A (Teaching the customer LOB experts how to navigate end-to-end business processes) and D (Providing feedback if changes are necessary to make the process fit the customer's needs).
