2026 Visual 3V0-21.23 Cert Test | Newest 3V0-21.23 100% Free Valid Exam Pdf

The Pass4cram is a leading platform that has been helping the VMware vSphere 8.x Advanced Design (3V0-21.23) exam candidates in exam preparation and boosting their confidence to pass the final 3V0-21.23 exam. The Pass4cram is offering real, valid, and updated VMware vSphere 8.x Advanced Design (3V0-21.23) practice questions. These VMware vSphere 8.x Advanced Design (3V0-21.23) exam questions are verified by VMware 3V0-21.23 exam trainers.

The happiness from success is huge, so we hope that you can get the happiness after you pass 3V0-21.23 exam certification with our developed software. Your success is the success of our Pass4cram, and therefore, we will try our best to help you obtain 3V0-21.23 Exam Certification. We will not only spare no efforts to design 3V0-21.23 exam materials, but also try our best to be better in all after-sale service.

Valid 3V0-21.23 Exam Pdf | Exam 3V0-21.23 Overviews

The experts and professors of our company have designed the three different versions of the 3V0-21.23 prep guide, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the 3V0-21.23 exam questions from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment. More importantly, the online version of 3V0-21.23 study practice dump from our company can run in an off-line state, it means that if you choose the online version, you can use the 3V0-21.23 exam questions when you are in an off-line state. In a word, there are many advantages about the online version of the 3V0-21.23 prep guide from our company.

VMware vSphere 8.x Advanced Design Sample Questions (Q19-Q24):

NEW QUESTION # 19
An architect is designing a new vSphere-based solution for a customer.
During a requirements gathering workshop, the following information is provided:
0 The solution must have a primary and secondary (isolated) environment
The solution must support orchestration to address application dependencies The isolated environment must be able to scale on demand in case of a DR scenario The solution is managed through a single interface Which solution should the architect include in this design?

- A. vSAN stretched cluster
- B. Disaster Recovery with VMware Cloud on AWS
- C. Site Recovery Manager with dedicated hardware
- D. A dedicated fault domain

Answer: B

Explanation:
This solution aligns with the requirements of having a primary and secondary isolated environment, orchestration of application dependencies, the ability to scale on demand in a disaster recovery (DR) scenario, and a single interface for management. VMware Cloud on AWS integrates with VMware's vSphere environment and offers orchestration for DR, as well as the flexibility to scale resources on demand in the event of a DR scenario. It also provides a unified management interface through vCenter.

NEW QUESTION # 20
An architect is responsible for the lifecycle management design for a brownfield vSphere-based solution.
The following information has been provided during initial meetings around the new solution:
Existing heterogeneous server hardware will be used to provide the hosting platform.
The available hardware is:
- 10 servers that contain 2 x 20-Core Intel Xeon processors and 512 GB RAM from Vendor A
- 10 servers that contain 2 x 24-Core Intel Xeon processors and 768 GB RAM from Vendor A
- 20 servers that contain 2 x 16-Core AMD EPYC processors and 512 GB RAM from Vendor B
- 10 servers that contain 1 x 24-Core AMD EPYC processors and 256 GB RAM from Vendor B All of the hardware is currently listed on the VMware Hardware Compatibility List (HCL).
All existing server hardware has 36 months vendor support remaining.
The requirements from the customer are:
REQ001 - The solution must support the hosting of 5,000 workloads spread across two physical sites.
REQ002 - The solution should minimize the number of clusters.
REQ003 - The solution must ensure that there is no impact to service when completing upgrades.
Given the resource requirements needed for the solution, the architect has calculated that all of the existing servers will be required to provide sufficient resources for the new environment. The Intel-based (Vendor A) servers will be deployed to the primary site and both the Intel-based and AMD-based servers (Vendor B) will be deployed to the secondary site.
Which assumption should the architect make to support the lifecycle management of vSphere 8?

- A. The different processor architecture within a single site will remediate against a single vSphere Lifecycle Manager image.
- B. The different processor architectures across both sites will remediate against a shared vSphere Lifecycle Manager baseline.
- C. The different processor architectures across both sites will remediate against a single vSphere Lifecycle Manager image.
- D. The different processor architectures will be located in the same cluster to support vSphere Lifecycle Manager image-based remediation.

Answer: A

Explanation:
vSphere Lifecycle Manager (vLCM) is used to manage ESXi host configurations and software versions in a consistent and streamlined manner. In this case, the architect needs to account for the heterogeneous hardware across two sites (Intel and AMD-based servers).
Since Intel and AMD processors are incompatible for remediation with a single vSphere Lifecycle Manager image, the different processor architectures should be grouped by site (not across sites). Within each site, vLCM can manage a single image per processor architecture, ensuring that each site'shosts with compatible processors are remediated consistently. Intel-based servers will be managed with one image and AMD-based servers with another image, but they can be managed in separate sites.
This approach avoids the issue where heterogeneous hardware with different processor types would need separate images. By keeping them within the same site, the architecture simplifies the lifecycle management and meets the requirement for minimizing clusters and ensuring service availability during upgrades.

NEW QUESTION # 21
What does evaluating storage protocols in a given scenario involve?

- A. Selecting the most suitable storage protocol (e.g., NFS, iSCSI, Fibre Channel) based on specific requirements.
- B. Identifying the network protocols required for vSphere networking.
- C. Determining the physical and storage connectivity topology.
- D. Ensuring that different storage segregation techniques are implemented in the vSphere environment.

Answer: A

NEW QUESTION # 22

Which two statements are true about gathering functional business and application requirements?
(Choose two.)

- A. It focuses on functional requirements with C-level stakeholders
- B. It might require multiple rounds of stakeholder interviews
- C. It is a non-iterative process
- D. It builds stakeholder consensus
- E. It leverages a single set of questions for all stakeholders

Answer: B,D

NEW QUESTION # 23

A company has a requirement that all production applications must have a maximum tolerable downtime (MTD) of one hour per month.
Which statement would be included in the physical design to support this requirement?

- A. Server hardware has already been purchased for the production applications.
- B. vSphere Fault Tolerance (FT) will not be enabled for the production applications.
- C. vSphere HA will be enabled on all clusters.
- D. vSphere HA Host Failure Response will be set to Restart VMs.

Answer: D

Explanation:
To meet the requirement of a maximum tolerable downtime (MTD) of one hour per month for production applications, the solution must ensure high availability and quick recovery of virtual machines (VMs) in the event of a host failure. Enabling vSphere High Availability (HA) with the Host Failure Response set to Restart VMs will automatically restart VMs on other hosts within the cluster in the event of a host failure.
This minimizes downtime and helps meet the MTD requirement by ensuring minimal disruption to production workloads.

NEW QUESTION # 24

......

Countless 3V0-21.23 exam candidates have passed their VMware vSphere 8.x Advanced Design (3V0-21.23) exam and they all got help from real and updated VMware 3V0-21.23 exam questions. You can also be the next successful candidate for the 3V0-21.23 Certification Exam. Both will give you a real-time 3V0-21.23 exam preparation environment and you get experience to attempt the 3V0-21.23 exam preparation experience before the final exam.

There is a 24/7 customer support team of Pass4cram Valid 3V0-21.23 Exam Pdf always to fix any problems, While you are now hesitant for purchasing our 3V0-21.23 real exam, some people have already begun to learn and walk in front of you, VMware Visual 3V0-21.23 Cert Test Besides, we should tell you that the contents of the three versions are the same, We can ensure you a pass rate as high as 99% of our 3V0-21.23 exam questions.

iTunes-created playlists appear in other places, To accommodate this 3V0-21.23 situation, you need to provide more than one constructor, There is a 24/7 customer support team of Pass4cram always to fix any problems.

3V0-21.23 Exam Preparation Files & 3V0-21.23 Study Materials & 3V0-21.23 Learning materials

While you are now hesitant for purchasing our 3V0-21.23 Real Exam, some people have already begun to learn and walk in front of you, Besides, we should tell you that the contents of the three versions are the same.

We can ensure you a pass rate as high as 99% of our 3V0-21.23 exam questions, VMware 3V0-21.23 Practice Test: Get the feel of the real exam scenario by using our clocked tests.
