## Excellent JN0-105 Reliable Braindumps Book & Leading Offer in Qualification Exams & Fast Download Juniper Junos, Associate (JNCIA-Junos)

Our Junos, Associate (JNCIA-Junos) (JN0-105) PDF file is portable which means customers can carry this real questions document to any place. You just need smartphones, or laptops, to access this Junos, Associate (JNCIA-Junos) (JN0-105) PDF format. These Junos, Associate (JNCIA-Junos) (JN0-105) questions PDFs are also printable. So candidates who prefer to study in the old way which is paper study can print Junos, Associate (JNCIA-Junos) (JN0-105) questions PDF as well.

### Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.</li> </ul>

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which command displays all IPv6 routes in the default routing instance?

- A. show route table inet.1
- B. show route table inet.0
- C. show route table inet6.0
- D. show route table inet6.1

**Answer: C**

Explanation:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes. The other options do not correspond to the correct IPv6 routing table.

Reference:

Juniper official documentation: Junos OS Routing Tables Overview.

### NEW QUESTION # 59

Which two statements are correct about Junos traceoptions? (Choose two.)

- A. Traceoption output, by default, is stored in /var/iog/<file-name>.
- B. Traceoptions are enabled through configuration.
- C. Traceoptions cannot be enabled in a production environment.
- D. Traceoptions are enabled by default.

**Answer: A,B**

Explanation:

Traceoptions in Junos OS are used for detailed debugging and troubleshooting of protocols and processes within the system. They are not enabled by default due to the potential performance impact and volume of data generated. Instead, traceoptions are enabled through specific configuration settings under the relevant protocol or process hierarchy. This allows administrators to target their troubleshooting efforts and control the scope of logging. By default, the output generated by traceoptions is stored in files located in the /var/log directory, with the file name typically specified in the traceoptions configuration. This structured approach to logging and debugging helps in diagnosing complex issues without overwhelming the system or the administrator with irrelevant data.

### NEW QUESTION # 60

Which two actions happen when multiple users issue the configure exclusive command to enter configuration mode on a Junos device? (Choose two.)

- A. Other users can enter configuration mode.
- B. The candidate configuration is unlocked.
- C. The candidate configuration is locked.
- D. Other users cannot enter configuration mode.

**Answer: D**

Explanation:

When a user enters configuration mode using the `configure exclusive` command on a Junos device, the candidate configuration is locked for that user, preventing other users from making concurrent configuration changes. This exclusive lock ensures that only one user can make changes at a time, preventing conflicts and potential errors from simultaneous modifications. Other users attempting to enter configuration mode while it is locked will receive a notification that the configuration is currently being edited by another user.

### NEW QUESTION # 61

Click the Exhibit button.

Referring to the exhibit, what does the highlighted number indicate?

- A. metric is 5
- B. cost is 5
- C. hop count is 5
- **D. route preference is 5**

**Answer: D**

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

### NEW QUESTION # 62

Click the Exhibit button.

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is rejected by the policy1 routing policy.
- B. The static route is rejected by the default routing policy.
- C. The static route is evaluated by the policy3 routing policy.
- **D. The static route is evaluated by the policy2 routing policy.**

**Answer: D**

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

### NEW QUESTION # 63

.....

Windows computers support the desktop practice test software. Real4Prep has a complete support team to fix issues of Juniper JN0-105 practice test software users. Real4Prep practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their Junos, Associate (JNCIA-Junos) (JN0-105) preparation status and remove their mistakes.
