

# Free PDF Quiz 2026 Databricks Databricks-Certified-Professional-Data-Engineer: Professional Databricks Certified Professional Data Engineer Exam Latest Test Bootcamp

Revised and updated according to the syllabus changes and all the latest developments in theory and practice, our Databricks Certified Professional Data Engineer Exam dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of Databricks-Certified-Professional-Data-Engineer Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario. For consolidation of your learning, our Databricks Certified Professional Data Engineer Exam dumps PDF file also provide you sets of practice questions and answers. Doing them again and again, you enrich your knowledge and maximize chances of an outstanding exam success.

Databricks-Certified-Professional-Data-Engineer certification exam is a challenging test that requires a comprehensive understanding of data engineering concepts and Databricks technology. Databricks-Certified-Professional-Data-Engineer exam is designed to test the candidate's ability to work with large data sets and complex data processing pipelines. Databricks-Certified-Professional-Data-Engineer Exam also tests the candidate's ability to troubleshoot and optimize data engineering solutions using Databricks.

## **Databricks-Certified-Professional-Data-Engineer Latest Test Bootcamp - Pass Databricks-Certified-Professional-Data-Engineer in One Time - Newest Valid Databricks-Certified-Professional-Data-Engineer Test Notes**

PassSureExam Databricks Certified Professional Data Engineer Exam (Databricks-Certified-Professional-Data-Engineer) practice test software is the answer if you want to score higher in the Databricks Certified Professional Data Engineer Exam (Databricks-Certified-Professional-Data-Engineer) exam and achieve your academic goals. Don't let the Databricks-Certified-Professional-Data-Engineer certification exam stress you out! Prepare with our Databricks-Certified-Professional-Data-Engineer exam dumps and boost your confidence in the Databricks Certified Professional Data Engineer Exam (Databricks-Certified-Professional-Data-Engineer) exam. We guarantee your road toward success by helping you prepare for the Databricks Certified Professional Data Engineer Exam (Databricks-Certified-Professional-Data-Engineer) certification exam. Use the best PassSureExam Databricks Databricks-Certified-Professional-Data-Engineer practice questions to pass your Databricks Certified Professional Data Engineer Exam (Databricks-Certified-Professional-Data-Engineer) exam with flying colors!

## **Databricks Certified Professional Data Engineer Exam Sample Questions (Q170-Q175):**

### **NEW QUESTION # 170**

Which of the following functions can be used to convert JSON string to Struct data type?

- A. FROM\_JSON (json value)
- B. CONVERT (json value, schema of json)
- C. CAST (json value as STRUCT)
- **D. FROM\_JSON (json value, schema of json)**
- E. TO\_STRUCT (json value)

**Answer: D**

Explanation:

Explanation

Syntax

Copy

1. from\_json(jsonStr, schema [, options])

Arguments

\*jsonStr: A STRING expression specifying a row of CSV data.

\*schema: A STRING literal or invocation of schema\_of\_json function (Databricks SQL).

\*options: An optional MAP<STRING,STRING> literal specifying directives.

Refer documentation for more details,

[https://docs.microsoft.com/en-us/azure/databricks/sql/language-manual/functions/from\\_json](https://docs.microsoft.com/en-us/azure/databricks/sql/language-manual/functions/from_json)

### NEW QUESTION # 171

A junior data engineer has manually configured a series of jobs using the Databricks Jobs UI. Upon reviewing their work, the engineer realizes that they are listed as the "Owner" for each job. They attempt to transfer

"Owner" privileges to the "DevOps" group, but cannot successfully accomplish this task.

Which statement explains what is preventing this privilege transfer?

- **A. Databricks jobs must have exactly one owner; "Owner" privileges cannot be assigned to a group.**
- B. Other than the default "admins" group, only individual users can be granted privileges on jobs.
- C. The creator of a Databricks job will always have "Owner" privileges; this configuration cannot be changed.
- D. A user can only transfer job ownership to a group if they are also a member of that group.
- E. Only workspace administrators can grant "Owner" privileges to a group.

**Answer: A**

Explanation:

The reason why the junior data engineer cannot transfer "Owner" privileges to the "DevOps" group is that Databricks jobs must have exactly one owner, and the owner must be an individual user, not a group. A job cannot have more than one owner, and a job cannot have a group as an owner. The owner of a job is the user who created the job, or the user who was assigned the ownership by another user. The owner of a job has the highest level of permission on the job, and can grant or revoke permissions to other users or groups. However, the owner cannot transfer the ownership to a group, only to another user. Therefore, the junior data engineer's attempt to transfer "Owner" privileges to the "DevOps" group is not possible. ### NEW QUESTION # 172

A Delta Lake table representing metadata about content from user has the following schema:

user\_id LONG, post\_text STRING, post\_id STRING, longitude FLOAT, latitude FLOAT, post\_time TIMESTAMP, date DATE

Based on the above schema, which column is a good candidate for partitioning the Delta Table?

- A. Post\_time
- B. User\_id
- **C. Date**
- D. Post\_id

**Answer: C**

Explanation:

Partitioning a Delta Lake table improves query performance by organizing data into partitions based on the values of a column. In the

given schema, the date column is a good candidate for partitioning for several reasons:

- \* Time-Based Queries: If queries frequently filter or group by date, partitioning by the date column can significantly improve performance by limiting the amount of data scanned.

- \* Granularity: The date column likely has a granularity that leads to a reasonable number of partitions (not too many and not too few). This balance is important for optimizing both read and write performance.

- \* Data Skew: Other columns like post\_id or user\_id might lead to uneven partition sizes (data skew), which can negatively impact performance.

Partitioning by post\_time could also be considered, but typically date is preferred due to its more manageable granularity.

### NEW QUESTION # 173

In order to use Unity catalog features, which of the following steps needs to be taken on man-aged/external tables in the Databricks workspace?

- A. Enable unity catalog feature in workspace settings
- B. Copy data from workspace to unity catalog
- C. Upgrade to DBR version 15.0
- D. Upgrade workspace to Unity catalog
- E. Migrate/upgrade objects in workspace managed/external tables/view to unity catalog

**Answer: E**

Explanation:

Explanation

Upgrade tables and views to Unity Catalog - Azure Databricks | Microsoft Docs Managed table: Upgrade a managed to Unity

Catalog External table: Upgrade an external table to Unity Catalog

### NEW QUESTION # 174

A Delta Lake table was created with the below query:

□ Consider the following query:

DROP TABLE prod.sales\_by\_store -

If this statement is executed by a workspace admin, which result will occur?

- A. The table will be removed from the catalog and the data will be deleted.
- B. The table will be removed from the catalog but the data will remain in storage.
- C. Nothing will occur until a COMMIT command is executed.
- D. An error will occur because Delta Lake prevents the deletion of production data.
- E. Data will be marked as deleted but still recoverable with Time Travel.

**Answer: A**

Explanation:

When a table is dropped in Delta Lake, the table is removed from the catalog and the data is deleted. This is because Delta Lake is a transactional storage layer that provides ACID guarantees. When a table is dropped, the transaction log is updated to reflect the deletion of the table and the data is deleted from the underlying storage. References:
