If you prefer to practice Analytics-DA-201 study guide on paper, Analytics-DA-201 PDF version will be your best choice. And you can also take some notes on them. Analytics-DA-201 PDF version is printable, and you can print them into hard one and take them with you, and you can study them anywhere and anyplace. In addition, Analytics-DA-201 Exam Materials offer you free demo to have a try, so that you can have a deeper understanding of what you are going to learn. You can receive the download link and password within ten minutes for Analytics-DA-201 exam braindumps, therefore you can start your learning immediately.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP ABAP Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 2	<ul style="list-style-type: none">ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP ABAP Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.
Topic 3	<ul style="list-style-type: none">ABAP Core Data Services and Data Modeling: This section of the exam measures the skills of the SAP ABAP Cloud Developer and covers the fundamental understanding of core data services (CDS) and how to design data models in the SAP ABAP environment. Candidates are expected to know how to define, consume, and optimize CDS views effectively to support application development in the cloud.
Topic 4	<ul style="list-style-type: none">ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.

These Salesforce Analytics-DA-201 Exam questions help you practice theoretical and practical skills in different aspects, making problem-solving easier. Our Salesforce Analytics-DA-201 questions PDF is a complete bundle of problems presenting the versatility and correlativity of questions observed in past exam papers. These questions are bundled into Salesforce Analytics-DA-201 PDF Questions following the official study guide.

Salesforce Certified Tableau Data Analyst Sample Questions (Q51-Q56):

NEW QUESTION # 51

You have the following chart that sorts states by the number of products each state has purchased.

Which formula should you use to include a number with the position of each state within each region?

- A. INDEX ()
- B. LOOKUP (SUM ([Quantity]))
- C. WINDOW_SUM(SUM ([Quantity]))
- D. FIRST ()

Answer: B

Explanation:

The LOOKUP function is used to return the value of a specified field in a different row, which can be defined relative to the current row. In this context, it can be used to include a number with the position of each state within each region by looking up the SUM([Quantity]) in each respective position. References: The information is inferred from general Tableau knowledge as well as the following sources:

- * Tableau Functions (Alphabetical)
- * LOOKUP
- * Tableau Certified Data Analyst Exam Guide

NEW QUESTION # 52

You are developing a data source in Tableau Prep.

You have two tables named Orders and Employees.

The Orders table was created in 2019 and contains the following columns.

The Employees table contains all the employee information for the various sales teams in the sales department and contains the following columns You want to prepare the data so that you can analyze sales trends over time for every sales team.

Which three actions should you perform in order? (Place the three correct options in order. Use the arrows to move Options to Answer Area. Use Answer Area arrows to re-order the options.)

Answer:

Explanation:

There are different ways to prepare the data in Tableau Prep, but one possible answer is:

Answer area:

- * Join the tables.
- * Aggregate the data by Sales Team.
- * Add the following filter to the Employees table: Sale Team - Team Alpha.

To analyze sales trends over time for every sales team, you need to combine the data from the Orders and Employees tables. You can do this by joining the tables on the Rep ID column, which is a common identifier for both tables. This will create a single table with all the columns from both tables. Next, you need to aggregate the data by Sales Team, which is the level of analysis you want. You can do this by grouping the data by the Sales Team column and applying an aggregation function (such as sum, average, count, etc.) to the other columns that you want to measure (such as Total Amount, Rep Tenure, etc.). This will create a summary table with one row for each sales team and the aggregated values for the other columns. Finally, you need to filter the data to focus on a specific sales team, such as Team Alpha. You can do this by adding a filter to the Employees table and selecting only the rows where Sales Team equals Team Alpha. This will remove the rows for other sales teams and keep only the data for Team Alpha.

NEW QUESTION # 53

From Tableau Desktop you sign in to a Tableau Server site.

What appears in the list of available data sources when you search for a published data source?

- A. All the data sources published to the Tableau Server within the folders to which you have access
- B. All the data sources published to the Tableau Server
- **C. All the data sources published to the site within the folders to which you have access**
- D. All the data sources published to the site

Answer: C

Explanation:

When you sign in to a Tableau Server site from Tableau Desktop and search for a published data source, you will see all the data sources published to the site within the folders to which you have access. You will not see data sources published to other sites or folders that you do not have permission to view. You can also filter your search by project, owner, or tag. References:

https://help.tableau.com/current/pro/desktop/en-us/connect_basic.htm

https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm When signed in to Tableau Server from Tableau Desktop, you'll only be able to see the data sources that have been published to the site and are within the folders that you have been granted access to. Tableau's permission and project structure mean that you won't see all data sources from the entire server unless you have permissions to do so.

NEW QUESTION # 54

You want to show the cumulative total of each year for every state.

Which quick table calculation should you use?

- A. Year Over Year Growth
- B. YTD Total
- **C. Running Total**
- D. VTD Growth

Answer: C

NEW QUESTION # 55

From Tableau Desktop you sign in to a Tableau Server site.

What appears in the list of available data sources when you search for a published data source?

- A. All the data sources published to the Tableau Server within the folders to which you have access
- B. All the data sources published to the Tableau Server
- **C. All the data sources published to the site within the folders to which you have access**
- D. All the data sources published to the site

Answer: C

Explanation:

When you sign in to a Tableau Server site from Tableau Desktop and search for a published data source, you will see all the data sources published to the site within the folders to which you have access. You will not see data sources published to other sites or folders that you do not have permission to view. You can also filter your search by project, owner, or tag. References:
