

Ping Identity PAP-001 Valid Study Notes, Examcollection PAP-001 Dumps Torrent

P.S. Free 2025 Ping Identity PAP-001 dumps are available on Google Drive shared by TestPassed: https://drive.google.com/open?id=12zWs5136mZ_bd3EpT0DTYivfjiQR8n16

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our PAP-001 Exam Torrent. Decades of painstaking efforts have put us in the leading position of PAP-001 training materials compiling market, and the excellent quality of our PAP-001 guide torrent and high class operation system in our company have won the common recognition from many international customers for us.

For candidates who are going to buy PAP-001 learning materials online, they may pay more attention to that money safety. We apply international recognition third party for the payment, and therefore your account and money safety can be guaranteed if you choose PAP-001 exam materials from us. In addition, in order to build up your confidence for PAP-001 Exam Dumps, we are pass guarantee and money back guarantee. If you fail to pass the exam in your first attempt, we will give you full refund and no other questions will be asked. You give us trust, and we help you pass the exam successfully.

Examcollection PAP-001 Dumps Torrent | PAP-001 Valid Dumps Questions

After years of hard work, our PAP-001 learning materials can take the leading position in the market. Our highly efficient operating system for learning materials has won the praise of many customers. If you are determined to purchase our PAP-001 learning materials, we can assure you that you can receive an email from our efficient system within 5 to 10 minutes after your payment, which means that you do not need to wait a long time to experience our learning materials. Then you can start learning our PAP-001 Learning Materials in preparation for the exam.

Ping Identity Certified Professional - PingAccess Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which two protocols does PingAccess use for authentication and authorization? (Choose 2 answers.)

- A. SAML
- B. OAuth2
- C. OIDC
- D. WS-Fed
- E. WS-Trust

Answer: B,C

Explanation:

PingAccess is designed to work with modern identity protocols. It does not support legacy WS-* protocols directly.

Exact Extract:

"PingAccess integrates with OAuth 2.0 and OpenID Connect (OIDC) to provide authentication and authorization for web and API resources."

* Option A (SAML) is incorrect - PingAccess does not natively consume SAML assertions; SAML can be used indirectly via PingFederate.

* Option B (WS-Fed) is not supported.

* Option C (WS-Trust) is not supported.

* Option D (OAuth2) is correct - used for authorization and token validation.

* Option E (OIDC) is correct - used for user authentication and sessions.

Reference: PingAccess Administration Guide - Supported Protocols

NEW QUESTION # 66

What information must be provided when setting the PingFederate Standard Token Provider for the Runtime engines?

- A. Issuer
- B. Port
- C. Host
- D. Client ID

Answer: C

Explanation:

When configuring PingAccess to use PingFederate as the Standard Token Provider for runtime engines, PingAccess must know how to contact PingFederate. The configuration requires the Host (PingFederate base URL).

Exact Extract:

"When configuring the Standard Token Provider, specify the PingFederate host to which PingAccess engines will connect for token validation."

* Option A (Issuer) is part of OIDC metadata but not required explicitly in this configuration.

* Option B (Client ID) is needed for OAuth clients but not when defining the token provider connection itself.

* Option C (Host) is correct - this is required to connect to PingFederate.

* Option D (Port) may be included within the host definition (host:port) but is not the required field.

Reference: PingAccess Administration Guide - Configuring PingFederate as a Token Provider

NEW QUESTION # 67

A business requires logs to be written to a centralized Oracle database. Which two actions must the PingAccess administrator take to enable this? (Choose 2 answers.)

- A. Remove the logs located in PA_HOME/log.
- B. Enable the Audit flag in the Resource.
- C. Configure log4j2.xml and log4j2.db.properties.
- D. Import the database certificate into the Trusted Certificate Group.
- E. Copy the database driver JAR file to the PA_HOME/lib directory.

Answer: C,E

Explanation:

PingAccess supports logging directly to a relational database using Log4j database appenders. To enable this:

- * Configure log4j2.xml to use a JDBC Appender.
- * Configure log4j2.db.properties with the database connection information.
- * Provide the appropriate database driver in the PA_HOME/lib directory.

Exact Extract:

"To log to a database, configure log4j2.xml and log4j2.db.properties, and place the JDBC driver JAR file in PA_HOME/lib."

- * Option A is correct - both files must be configured.
- * Option B is incorrect - existing logs do not need removal.
- * Option C is incorrect - enabling audit is unrelated to database logging.
- * Option D is correct - the Oracle JDBC driver must be installed in PA_HOME/lib.
- * Option E is incorrect unless TLS is used to connect to the DB, but it is not required for standard DB logging setup.

NEW QUESTION # 68

A PingAccess administrator needs to configure PingAccess to validate tokens. Which two options can the administrator use? (Choose 2 answers)

- A. Common SAML provider
- B. PingAuthorize
- C. PingFederate
- D. Common OIDC provider
- E. Kerberos

Answer: C,D

Explanation:

PingAccess validates access tokens using Access Token Managers, which are typically backed by PingFederate or a generic OIDC provider.

Exact Extract:

"PingAccess validates tokens through Access Token Managers, which can be configured against PingFederate or a common OIDC provider."

- * Option A (PingFederate) is correct - the most common token provider.
- * Option B (Kerberos) is not supported for token validation.
- * Option C (SAML provider) is incorrect - PingAccess does not natively consume SAML assertions.
- * Option D (Common OIDC provider) is correct - tokens can be validated against any OIDC-compliant IdP.
- * Option E (PingAuthorize) is an authorization engine, not a token provider.

NEW QUESTION # 69

An administrator needs to configure a signed JWT identity mapping for an application that expects to be able to validate the signature. Which endpoint does the application need to access to validate the signature?

- A. /pa/aicb/cb
- B. /pa-admin-api/v3/identityMapping/descriptors/jwtidentitymapping
- C. /pa/authToken/JWKS
- D. /pa-admin-api/v3/authTokenManagement

Answer: C

Explanation:

Applications consuming signed JWTs need the JSON Web Key Set (JWKS) endpoint to retrieve the public keys used for validating JWT signatures. PingAccess exposes this at /pa/authToken/JWKS.

Exact Extract:

"When using JWT identity mapping, applications can obtain the signing keys from the /pa/authToken/JWKS endpoint to validate the JWT signature."

- * Option A is correct - /pa/authToken/JWKS provides the key set for signature validation.
- * Option B is incorrect - that's an administrative API for configuring identity mappings, not a runtime validation endpoint.
- * Option C is incorrect - /pa/aicb/cb is the OIDC callback endpoint.
- * Option D is incorrect - /pa-admin-api/v3/authTokenManagement is for admin token management, not JWT validation.
