Google Professional-Cloud-Database-Engineer Exam | Test Professional-Cloud-Database-Engineer Dates - Instant Download of Interactive Professional-Cloud-Database-Engineer Questions

The web-based Google Professional-Cloud-Database-Engineer practice exam does not require special plugins and creates a Professional-Cloud-Database-Engineer testing atmosphere that removes candidates exam anxiety. "TrainingDump" web-based Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) practice test tracks your progress and helps you overcome mistakes. Our Google Professional-Cloud-Database-Engineer practice exam software displays

results at the end of each attempt.

Google Professional-Cloud-Database-Engineer certification is a valuable credential for database professionals who want to advance their careers and demonstrate their expertise in managing database solutions on Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification is recognized by employers and industry experts as a testament to the candidate's knowledge and skills in designing, building, and managing enterprise-grade database systems. With the growing demand for cloud-based database solutions, the Professional-Cloud-Database-Engineer certification can open up new career opportunities and help professionals stay ahead of the curve.

Google Professional-Cloud-Database-Engineer Certification Exam is a valuable certification that demonstrates the candidate's ability to design, develop, and manage databases on Google Cloud Platform. It is a challenging exam that requires candidates to have hands-on experience and a deep understanding of database concepts. Candidates who pass the exam will be recognized as experts in Google Cloud databases and will gain a competitive edge in the job market.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q127-Q132):

NEW QUESTION # 127
Your organization works with sensitive data that requires you to manage your own encryption keys. You are working on a project that stores that data in a Cloud SQL database. You need to ensure that stored data is encrypted with your keys. What should you do?

- A. Export data periodically to a Cloud Storage bucket protected by Customer-Supplied Encryption Keys.
- B. Use Cloud SQL Auth proxy.
- C. Use customer-managed encryption keys with Cloud SQL.
- D. Connect to Cloud SQL using a connection that has SSL encryption.

Answer: C

NEW QUESTION # 128
You are configuring the networking of a Cloud SQL instance. The only application that connects to this database resides on a Compute Engine VM in the same project as the Cloud SQL instance. The VM and the Cloud SQL instance both use the same VPC network, and both have an external (public) IP address and an internal (private) IP address. You want to improve network security. What should you do?

- A. Disable and remove the external IP address assignment.
- B. Disable both the external IP address and the internal IP address, and instead rely on Private Google Access.
- C. Specify an authorized network with the CIDR range of the VM.
- D. Disable and remove the internal IP address assignment.

Answer: B

NEW QUESTION # 129
You are troubleshooting a connection issue with a newly deployed Cloud SQL instance on Google Cloud.
While investigating the Cloud SQL Proxy logs, you see the message Error 403: Access Not Configured. What should you do?

- A. Check whether your service account has cloudsql.instances.connect permission.
- B. Enable the Cloud SQL Admin API.
- C. Ensure that you are using an external (public) IP address interface.
- D. Check the app.yaml value cloud_sql_instances for a misspelled or incorrect instance connection name.

Answer: B

Explanation:
https://cloud.google.com/sql/docs/mysql/connect-auth-proxy#troubleshooting C because in docs it says
"Make sure to enable the Cloud SQL Admin API. If it is not, you see output like Error 403: Access Not Configured in your Cloud SQL

NEW QUESTION # 130

You are running a large, highly transactional application on Oracle Real Application Cluster (RAC) that is multi-tenant and uses shared storage. You need a solution that ensures high-performance throughput and a low-latency connection between applications and databases. The solution must also support existing Oracle features and provide ease of migration to Google Cloud. What should you do?

- A. Migrate to Google Cloud VMware Engine
- B. Migrate to Google Kubernetes Engine (GKE)
- C. Migrate to Bare Metal Solution for Oracle.
- D. Migrate to Compute Engine.

Answer: D

NEW QUESTION # 131

You are migrating a telehealth care company's on-premises data center to Google Cloud. The migration plan specifies:
PostgreSQL databases must be migrated to a multi-region backup configuration with cross-region replicas to allow restore and failover in multiple scenarios.
MySQL databases handle personally identifiable information (PII) and require data residency compliance at the regional level.
You want to set up the environment with minimal administrative effort. What should you do?

- A. Set up different projects for PostgreSQL and MySQL databases, and apply organizational policy constraints at a project level.
- B. Set up Cloud Logging and Cloud Monitoring with Cloud Functions to send an alert every time a new database instance is created, and manually validate the region.
- C. Set up different organizations for each database type, and apply policy constraints at the organization level.
- D. Set up Pub/Sub to ingest data from Cloud Logging, send an alert every time a new database instance is created, and manually validate the region.

Answer: C

NEW QUESTION # 132
