Knowledge of the Managing-Cloud-Security real study guide contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the Managing-Cloud-Security question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite Managing-Cloud-Security Exam Questions download. Users can not only learn new knowledge, can also apply theory into the Managing-Cloud-Security actual problem, so to grasp the opportunity!

Our company is a well-known multinational company, has its own complete sales system and after-sales service worldwide. Our Managing-Cloud-Security real study guide have become a critically acclaimed enterprise, so, if you are preparing for the exam qualification and obtain the corresponding certificate, so our company launched Managing-Cloud-Security Exam Questions are the most reliable choice of you. The service tenet of our company and all the staff work mission is: through constant innovation and providing the best quality service, make the Managing-Cloud-Security question guide become the best customers electronic test study materials.

## Trustable WGU Valid Test Review – Useful Valid Managing-Cloud-Security Test Notes

We have created a number of reports and learning functions for evaluating your proficiency for the Managing-Cloud-Security exam dumps. In preparation, you can optimize WGU Managing-Cloud-Security practice exam time and question type by utilizing our WGU Managing-Cloud-Security Practice Test software. DumpStillValid makes it easy to download WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam questions immediately after purchase.

### WGU Managing Cloud Security (JY02) Sample Questions (Q150-Q155):

#### NEW QUESTION # 150

A user creates new financial documents that will be stored in the cloud. Which action should the user take before uploading the documents to protect them against threats such as packet capture and on-path attacks?

- A. Encryption
- B. Hashing
- C. Metadata labeling
- D. Change tracking

Answer: A

Explanation:

Before transmitting sensitive financial data to the cloud, the best defense against interception threats like packet capture and man-in-the-middle attacks is encryption. Encryption protects data in transit by converting plain text into cipher text, which can only be deciphered with the correct keys.

Hashing provides integrity verification but does not secure confidentiality. Change tracking monitors modifications but does not prevent interception. Metadata labeling adds context but does not protect against on-path attackers.

Using strong encryption protocols (e.g., TLS) ensures that even if traffic is intercepted, the attacker cannot read the data. Encryption also aligns with compliance requirements such as PCI DSS, which mandates encryption for financial data during transmission. By encrypting before upload, the user ensures end-to-end confidentiality across potentially insecure networks.

#### NEW QUESTION # 151

Which phase in secure application design and development includes threat modeling?

- A. Develop
- **B. Design**
- C. Define
- D. Training

**Answer: B**

Explanation:

Threat modeling is performed during the Design phase of secure application development. Managing Cloud guidance explains that threat modeling evaluates application architecture, data flows, trust boundaries, and attack surfaces before development begins. By identifying threats early, security controls can be built directly into the application design rather than added later. This reduces vulnerabilities and lowers remediation costs.

The define phase establishes requirements, training builds skills, and development focuses on coding. Therefore, the design phase is the correct answer.

#### NEW QUESTION # 152

The designers of a proposed data center are evaluating the requirements to use virtualization for the services it provides. Which type of design consideration is being addressed?

- A. Environmental
- B. Regulatory
- **C. Logical**
- D. Physical

**Answer: C**

Explanation:

Evaluating the use of virtualization addresses a logical design consideration. Managing Cloud documentation explains that logical design focuses on system architecture, virtualization layers, network segmentation, and service delivery models.

Virtualization determines how workloads are abstracted from physical hardware, how resources are shared, and how isolation is enforced between workloads. Decisions related to hypervisors, virtual machines, containers, and orchestration platforms fall under logical architecture rather than physical layout or environmental controls.

Regulatory considerations involve compliance requirements, environmental considerations include power and cooling, and physical considerations address space and hardware placement. Therefore, virtualization is a logical design consideration.

#### NEW QUESTION # 153

Which document, commonly existing in an IT enterprise, can be used to speed up the process of identifying a potential cloud service provider (CSP)?

- A. Physical plant blueprint
- **B. Entity relationship and data flow diagrams**
- C. Egress safety design
- D. Business continuity and disaster recovery plan

**Answer: B**

Explanation:

Entity relationship and data flow diagrams can significantly speed up the process of identifying a suitable cloud service provider. Managing Cloud guidance explains that these diagrams document how applications, systems, and data interact across the enterprise. By understanding data sensitivity, integration points, trust boundaries, and workloads, organizations can quickly determine which cloud service models, security controls, and compliance capabilities are required from a CSP. This enables efficient evaluation and comparison of providers.

Physical plant blueprints and egress safety designs are facilities-related documents, while BCDR plans focus on recovery strategies rather than provider selection. Therefore, entity relationship and data flow diagrams are the most useful documents for accelerating CSP identification.

#### NEW QUESTION # 154

Which aspect of access management safeguards data by determining the user's rights to a certain resource?

- A. Authentication
- B. Authorization
- C. Centralization
- D. Provisioning

**Answer: B**

Explanation:

Authorization is the access management aspect that safeguards data by determining a user's rights to specific resources. Managing Cloud principles describe authorization as the process of enforcing policies that define what actions an authenticated user is permitted to perform within a system.

Once a user's identity has been authenticated, authorization evaluates roles, permissions, and access rules to decide whether access to a particular resource should be granted or denied. This ensures that users can only access data and services necessary for their job functions, reducing the risk of unauthorized data exposure.

Authentication verifies who the user is, provisioning creates the identity, and centralization relates to identity architecture design. None of these directly determine access rights. Authorization is therefore the key mechanism that enforces least privilege and protects cloud data from improper access.

With regard to the Internet, if you use our Managing-Cloud-Security study materials in a network environment, then you can use our products in a non-network environment. Managing-Cloud-Security learning guide guarantee that you can make full use of all your free time to learn, if you like. The reason why we emphasize this is that we know you have a lot of other things to do. Many users stated that they can only use fragmented time to learn. Experts at Managing-Cloud-Security practice prep also fully considered this point.
