免費下載Deep-Security-Professional考題，Deep-Security-Professional證照信息

有些網站在互聯網上為你提供高品質和最新的Trend的Deep-Security-Professional考試學習資料，但他們沒有任何相關的可靠保證，在這裏我要說明的是這NewDumps一個有核心價值的問題，所有Trend的Deep-Security-Professional考試都是非常重要的，但在個資訊化快速發展的時代，NewDumps只是其中一個，為什麼大多數人選擇NewDumps，是因為NewDumps所提供的考題資料一定能幫助你通過測試，為什麼呢，因為它提供的資料都是最新的，這也是大多數考生通過實踐證明了的。

趨勢科技Certified Professional for Deep Security考試是一個有價值的認證計劃，旨在為IT專業人士提供驗證其深度安全技能和知識的途徑。它涵蓋了廣泛的主題，旨在測試您有效實施、管理和支持趨勢科技深度安全解決方案的能力。通過此考試，您可以展示您在深度安全方面的專業知識，並增強您在IT安全行業的職業前景。

最新的 Deep Security Deep-Security-Professional 免費考試真題 (Q29-Q34):

問題 #29

Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.
- B. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- C. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- D. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.

答案: A

解題說明：

The Intrusion Prevention Module (IPS) performs deep packet inspection, examining both the headers and payload of network packets to detect and block exploits, malware, and other threats. It is not limited to header analysis and is not responsible for file integrity or application control.

From the official documentation:

"The Intrusion Prevention module inspects the payload and headers of network traffic to detect and block exploits and attacks. It uses deep packet inspection techniques to identify malicious content and suspicious patterns in network data." Option B is correct. Option A is only partially true (IPS looks at more than just headers).

Option C is handled by Integrity Monitoring, not IPS.

Option D is handled by Application Control, not IPS.

問題 #30

While viewing the details of the Firewall Protection Module, as displayed in the exhibit, you note that a few rules have already been assigned. You try to disable these rules, but they can not be unassigned. Why can the displayed rules not be unassigned?

NAME	PRIOR	DIRECT	FRAME T	PROTO	SOURCE IP	SOURCE M	SOURCE P	DESTINA
Allow (3)								
☒ Allow solicited ICMP replies	0 - Lowest	Incoming	IP	ICMP	Any	Any	N/A	Any
☒ Allow solicited TCP/UDP replies	0 - Lowest	Incoming	IP	TCP+UDP	Any	Any	Any	Any
☒ ARP	0 - Lowest	Incoming	ARP	N/A	N/A	Any	N/A	N/A
Force Allow (1)								
☒ Allow ICMP fragmentation pack...	2 - Normal	Incoming	IP	ICMP	Any	Any	N/A	Any

- A. The rules displayed in the exhibit can not be unassigned as the administrator currently logged into the Deep Security Manager Web console does not have the permissions necessary to unassign rules.
- B. The rules displayed in the exhibit were assigned to the policy automatically when a Recommendation Scan was run. Rules assigned through a Recommendation Scan can not be disabled once assigned.
- C. The rules displayed in the exhibit have been hard-coded with the details of the policy. These rules will automatically be assigned to all Firewall policies that are created and can not be unassigned.
- **D. The rules displayed in the exhibit have been assigned to the policy at the parent level. Rules assigned to a parent policy can not be unassigned at the child level.**

答案：D

解題說明：

Firewall rules that are assigned at the parent policy level are inherited by all child policies and cannot be unassigned from the child policy. You must remove or modify these rules at the parent policy to affect all children.

問題 #31

How is scan caching used in agentless implementations of Deep Security?

- A. Scan caching maintains the Inclusions and Exclusions lists from the Malware Scan Configuration in memory to improve performance.
- **B. Scan caching enhances the performance of the Deep Security Virtual Appliance in that files scanned for malware on a virtual machine that appear on other virtual machines may not need to be scanned again.**
- C. Scan caching is used in Agent-based installations only and is not supported in an agentless implementation.
- D. Scan caching manages resource usage by staggering the launch of malware scans to prevent scan storms

答案：B

問題 #32

Based on the policy configuration displayed in the exhibit, which of the following statements is true?

- A. If the Deep Security Manager does not receive a message from the Deep Security agent every 20 minutes, an alert will be raised.
- B. Deep Security Agents will send event information to Deep Security Manager every 10 minutes.
- C. Changes to any of the Deep Security policies will be sent to the Deep Security Agents as soon as the changes are saved.
- D. Administrators with access to the protected Server will be able to uninstall the Deep Security Agent through Windows Control Panel.

答案：D

解題說明：

In the exhibit, under "Agent Self Protection," the toggle is disabled (blue switch is to the left, "No"), which means the self-protection feature is off.

This means local users/administrators on the server can uninstall, stop, or modify the agent via standard Windows tools (like the Control Panel).

Option A is incorrect: "Automatically send Policy changes to computers" is set to "No," so policy changes will not be pushed instantly; they'll take effect at the next agent heartbeat.

Option C is incorrect: Heartbeat interval is set to 22 minutes (not 10).

Option D is incorrect: The alert threshold is for "missed heartbeats" and is set to 3, but the heartbeat interval is 22 minutes, not 20.

問題 #33

Which of the following statements is false regarding the Log Inspection Protection Module?

- A. Scan for Recommendations identifies Log Inspection rules that Deep Security should implement.
- B. Custom Log Inspections rules can be created using the Open Source Security (OSSEC) standard.
- C. Deep Security Manager collects Log Inspection Events from Deep Security Agents at every heartbeat.
- D. The Log Inspection Protection Module is supported in both agent-based and agentless environments.

答案：D

解題說明：

Log Inspection requires running some analysis on the computer and is not supported in Agentless deployments.

Explication: Study Guide - page (310)

問題 #34

.....

我們提供的產品是可以100%把你推上成功，那麼IT行業的巔峰離你又近了一步。如果你還沒有通過考試的信心，在這裏向你推薦一個最優秀的參考資料。在上面你可以免費下載我們提供的關於 Trend Deep-Security-Professional 題庫的部分考題及答案測驗我們的可靠性。只需要短時間的學習就可以通過考試的最新的 Deep-Security-Professional 考古題出現了。選擇最新的 Deep-Security-Professional 考題會將對你有很大幫助，你需要考前用考試模擬題隨機做練習，重複做上幾次。
