## ライン試験

GuidewireのInsuranceSuite-Analyst認定試験を受けることを決めたら、CertShikenがそばにいて差し上げますよ。CertShikenはあなたが自分の目標を達成することにヘルプを差し上げられます。あなたがGuidewireのInsuranceSuite-Analyst「Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam」認定試験に合格する需要を我々はよく知っていますから、あなたに高品質の問題集と科学的なテストを提供して、あなたが気楽に認定試験に受かることにヘルプを提供するのは我々の約束です。

### Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam 認定 InsuranceSuite-Analyst 試験問題 (Q38-Q43):

#### 質問 # 38

A \_\_\_\_\_ key field stores a reference to a related object in another entity. It defines a unidirectional relationship. For example, AssignedUser in Claim is the name of a field that points to a specific user in the User entity.

- A. array
- B. entity
- C. field
- D. type
- E. foreign

正解: E

解説:

Comprehensive and Detailed Explanation:

In the Guidewire Data Model, a Foreign Key (Option C) is the mechanism used to link one entity to a specific instance of another entity.

\* Definition: A Foreign Key field stores the unique identifier (ID) of a related object in a different table.

This establishes a "Many-to-One" or "One-to-One" relationship. It is considered "unidirectional" because the link is defined on the source entity (the child) pointing to the target entity (the parent).

\* The Example: The question provides the example of AssignedUser on the Claim entity. A single claim is assigned to exactly one specific user. Therefore, the Claim entity contains a Foreign Key field named AssignedUser that holds the ID of the corresponding record in the User entity.

\* Analyst Relevance: Understanding Foreign Keys is crucial for Data Mapping. When an analyst defines requirements for integration, they must know if a field is a simple string or a link to another object. If it is a Foreign Key, the integration must provide the ID (or a public ID) of that existing object, not just a text name.

Why the other options are incorrect:

\* B. Type key: A Type Key links to a Typelist (a static list of defined values like "Open," "Closed," or "Pending"), not to a dynamic "entity" that stores user data.

\* E. Array: An Array defines a "One-to-Many" relationship (e.g., a Policy has an array of Vehicles), which is the inverse of a Foreign Key.

\* D. Field: While technically a field, the specific architectural term for a reference field is a Foreign Key.

"Field" generally implies atomic data (String, Integer).

#### 質問 # 39

Preparation best practices to complete prior to the elaboration workshop include:

- A. Review deployment notes to ensure alignment
- B. Identify customer's key business requirements
- C. Create demonstration data necessary to demo functionality
- D. Write acceptance criteria for each story card used in the session

正解: B、C

解説:

Elaboration workshops are a critical activity in Guidewire projects, particularly during early phases such as Inception. Proper preparation ensures that these workshops are productive, focused, and aligned with business objectives. Two key preparation best practices are identifying the customer's key business requirements and creating demonstration data.

Identifying the customer's key business requirements (Option B) is essential so the elaboration session focuses on the most important

business scenarios. Analysts must understand priority workflows, regulatory constraints, and business goals before the session begins. This allows demonstrations to be relevant and helps stakeholders validate whether Guidewire out-of-the-box functionality meets their needs.

Creating demonstration data (Option C) is equally important. Elaboration workshops rely heavily on showing the system in action. Preconfigured demo data—such as sample policies, accounts, or claims—ensures that workflows can be demonstrated smoothly without delays or distractions. Well-prepared data allows participants to focus on functionality rather than setup issues.

Reviewing deployment notes (Option A) is not relevant prior to elaboration workshops, as deployment concerns occur much later in the project lifecycle. Writing detailed acceptance criteria for each story card (Option D) is typically done after elaboration, once stories are refined and prioritized for development.

By focusing on requirements clarity and effective demonstrations, analysts help ensure that elaboration workshops validate scope, uncover gaps early, and contribute meaningful updates to the project backlog.

#### 質問 # 40

\_\_\_\_\_ is a high-level sprint plan that is delivered at the end of Inception. It is used to provide guidance on which stories are prioritized based on value or risk.

- A. Conceptual Sprint Plan
- B. Development Sprint Plan
- C. Risk-based Sprint Plan
- D. Pre-Inception Sprint Plan
- E. Prioritized Sprint Plan

正解: A

解説:

The Conceptual Sprint Plan is a key deliverable produced at the end of the Inception phase in Guidewire SurePath methodology.

It provides high-level guidance on how user stories are expected to be sequenced across future sprints, typically based on business value, dependencies, and risk. It does not assign tasks or commit teams to detailed schedules but serves as a strategic roadmap for delivery.

This plan bridges business priorities and Agile execution and is essential for transitioning from Inception into Sprint Zero and active development.

#### 質問 # 41

An example of a tool built by Guidewire Professional Services to support implementation projects is:

- A. Business objective
- B. Requirement
- C. User story card
- D. Guiding principle

正解: C

解説:

The User Story Card is a key tool developed and standardized by Guidewire Professional Services to support InsuranceSuite implementation projects, making Option A the correct answer.

User story cards provide a structured, consistent way to capture requirements using an Agile approach aligned with SurePath methodology. They define business intent, acceptance criteria, and scope boundaries in a format that supports elaboration, estimation, development, and testing.

The remaining options are not tools. Requirements (Option B), business objectives (Option C), and guiding principles (Option D) are types of content, not standardized delivery tools.

User story cards enable consistent communication across analysts, developers, and testers and are central to successful Guidewire implementations.

#### 質問 # 42

\_\_\_\_\_ provide starting points for solutions that can be customized and added to the Guidewire products.

- A. Product Documentation

- B. Extension Packs
- **C. Accelerators**
- D. User Story Cards

正解: C

解説:

Comprehensive and Detailed Explanation:

Accelerators (Option D) are the correct Guidewire term for pre-built solutions provided by Guidewire or its partners (available on the Guidewire Marketplace).

\* Definition: An Accelerator is a software asset that provides a "starting point" for a specific business problem or integration (e.g., a "London Market Accelerator" or a specific "Payment Gateway Accelerator").

\* Purpose: They are designed to be customized. Unlike the core product (which you configure) or a SaaS service (which you consume), an accelerator is often code or configuration that you download, install, and then modify to fit your specific project needs. They are not "plug-and-play" in the strictest sense; they accelerate the development by providing the foundational code.

Why other options are incorrect:

\* B. Extension Packs: While similar, "Extension Packs" (now often referred to as simply Extensions or Standards-based templates) typically refer to smaller, verified add-ons that might not require as much

"customization" as an accelerator. However, "starting point for solutions" is the textbook definition for Accelerators.

\* A. User Story Cards: These are documentation artifacts, not software solutions.

### 質問 # 43

.....

InsuranceSuite-Analystの実際のテストは、さまざまな分野の多くの専門家によって設計され、顧客のさまざまな状況を考慮し、顧客が時間を節約できるように実用的なInsuranceSuite-Analyst学習教材を設計しました。学生であろうとオフィスワーカーであろうと、InsuranceSuite-Analyst試験の準備にすべての時間を費やすことはないと思います。専門知識の勉強、家事、子供の世話などに取り組んでいます。簡素化された情報により、効率的に学習することができます。そして、あなたは事前に本当の試験を感じたいですか？ InsuranceSuite-Analyst試験問題を購入するだけです！
