Salesforce Plat-Dev-301 Practice Exams for Thorough Preparation (Desktop/Online/PDF)

For a long time, high quality is our Plat-Dev-301 exam torrent constantly attract students to participate in the use of important factors, only the guarantee of high quality, to provide students with a better teaching method, and at the same time the Plat-Dev-301 practice materials bring more outstanding teaching effect. And with the three different versions of our Plat-Dev-301 Exam Questions on the web, so high-quality Plat-Dev-301 learning guide help the students know how to choose suitable for their own learning method, our Plat-Dev-301 study materials are a very good option for you to pass the exam.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q45-Q50):

NEW QUESTION # 45

The use of the transient keyword in Visualforce page controllers helps with which common performance issue?

- A. Reduces load times
- B. Improves page transfers
- C. Reduces view state
- D. Improves query performance

Answer: C

Explanation:

The transient keyword in Visualforce page controllers marks variables that should not be part of the view state, which can significantly reduce the size of the view state. This can help avoid view state limit errors and improve page performance because a

smaller view state requires less time to send to the client.

NEW QUESTION # 46

Exhibit.

Given the code above, which two changes need to be made in the Apex Controller for the code to work? Choose 2 answers

- A. Change the method signature to be global static, not public to String.
- **B. Change the argument in the Apex Controller line 05 from subject to string.**
- C. Annotate the entire class as `@AuraEnabled` instead of just the single method.
- **D. Remove line 06 from the Apex Controller and instead use `firstName` in the return on line 07.**

Answer: B,D

Explanation:

Based on the code provided, here are the necessary changes:

Change B is required because the argument in the Apex controller's `serverEcho` method must match the data type expected by the JavaScript calling the method. The Apex method expects an Object named `firstName`, which is then cast to a String inside the method. The JavaScript is passing an object with a property `firstName`, so no change is needed in the JavaScript.

Change D is correct because line 06 is redundant and unnecessary. We can directly use `firstName` in the return statement as it is already a String type. The `get()` method is typically used when you have a Map and you need to retrieve a value by its key. Since `firstName` is already being passed as a String, there's no need to cast it or retrieve it using `get()`.

NEW QUESTION # 47

A Salesforce org has more than 50,000 contacts. A new business process requires a calculation that aggregates data from all of these contact records. This calculation needs to run once a day after business hours.

which two steps should a developer take to accomplish this?

Choose 2 answers

A)

B)

C)

D)

- A. Option D
- **B. Option B**
- **C. Option C**
- D. Option A

Answer: B,C

Explanation:

When dealing with large datasets and the need to perform complex calculations or data aggregation, batch Apex and scheduling are typically used to efficiently process records in batches and to execute the process during off-peak hours.

Option B is correct because using the `@future` annotation allows you to run methods in the background, but it is not suitable for operations that need to process more than 50,000 records, which is the governor limit for future methods.

Option C is correct because implementing the `Schedulable` interface allows you to schedule the class to run at specified times, such as after business hours, which is a requirement for this scenario.

Option A is incorrect because `Queueable` is typically used for chaining jobs and handling asynchronous processing of individual transactions, not for processing large datasets at scheduled times.

Option D is incorrect because the `Database.Batchable` interface is what's needed for processing large datasets, not `Database.Stateful`. The `Database.Stateful` interface is used to maintain state across batch job transactions.

NEW QUESTION # 48

A developer wrote the following method to find all the test accounts in the org:

What should be used to fix this failing test?

- A. Test.fixsdSsarchReaulta () method to set up expected data
- B. @isTest (SeeAllData=true) to access org data for the test
- C. @testsetup method to set up expected data
- D. Test.loadData to set up expected data

Answer: A

Explanation:

NEW QUESTION # 49

Universal Containers decided to use Salesforce to manage a new hire interview process. A custom object called Candidate was created with organization-wide defaults set to Private. A lookup on the Candidate object sets an employee as an Interviewer. What should be used to automatically give Read access to the record when the lookup field is set to the Interviewer user?

- A. The record cannot be shared with the current setup.
- B. The record can be shared using a permission set.
- C. The record can be shared using an Apex class.
- D. The record can be shared using a sharing rule.

Answer: D

Explanation:

A sharing rule can be used to automatically give Read access to a user specified in a lookup field. Sharing rules are declarative and can be based on criteria such as the value of a lookup field. This can be done without writing code and is maintainable through the Salesforce UI.

NEW QUESTION # 50

.....

This Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) practice exam software is easy to use. A free demo version of this format is also available to assess it before buying. It is compatible with all Windows computers. This Salesforce Plat-Dev-301 Practice Test software familiarizes you with the real Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam pattern. You must have an active Internet connection to validate your product license.
