Microsoft AB-730 Reliable Test Notes - AB-730 Valid Exam Tips

It is impossible to pass AB-730 exam without efforts and time, but our BraindumpQuiz team will try our best to reduce your burden

when you are preparing for AB-730 exam. The normal model test and understandable answer analysis will make you secretly master the exam skills to pass AB-730 exam. In order to reduce more stress for you, we promise you if you fail the exam, what you need to do is to send your scanned unqualified transcripts to our email box. After confirmation, we will immediately refund all the money that you purchased the AB-730 Exam Materials. BraindumpQuiz is worthy your trust.

Microsoft AI Business Professional Sample Questions (Q69-Q74):

NEW QUESTION # 69

You use Microsoft 365 Copilot.

You need to delete all your conversations by using the least amount of effort.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Settings app in Windows 11
- B. the Microsoft 365 Copilot desktop app
- C. the My Account portal in Microsoft 365
- D. the Microsoft 365 Copilot web app

Answer: C

Explanation:

You can delete your conversations in a few simple ways through the Microsoft 365 Copilot web app and account settings.

*-> Deleting Your Entire Activity History

If you want a fresh start across all Microsoft 365 apps (Word, Excel, PowerPoint, etc.), you can clear your entire history at once:

1. Sign in to your Microsoft My Account portal with your work or school account.
2. Go to Settings & Privacy > Privacy > Data options.
3. Open the Copilot activity history section

Deleting Individual Conversations

1. Open the Web App: Navigate to the Microsoft 365 Copilot web app or copilot.microsoft.com
2. Locate Your History: Look for the "Chat" or "Conversations" list, typically found on the left-hand sidebar.
3. Delete the Chat:
4. Hover over the conversation you want to remove.
5. Click the three dots (...) (More options) next to the conversation title.
6. Select Delete and confirm your choice.

NEW QUESTION # 70

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Outlook.

Which two tasks can you achieve by using Copilot in Outlook? Each correct answer presents a complete the solution.

NOTE: Each correct selection is worth one point.

- A. Insert a custom HTML signature that has specific formatting.
- B. Customize the folder structure to organize your emails.
- C. Create a summary of unread emails in your inbox.
- D. Generate a draft response to an email based on the context of the conversation.

Answer: C,D

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation Microsoft AI Business professional documents:

Copilot in Outlook is designed to reduce time spent reading and writing email by using AI to summarize message threads and generate drafts grounded in the current email context. Microsoft guidance for Copilot in Outlook highlights core capabilities such as drafting replies that reflect the conversation tone and content, and summarizing email threads or inbox content so users can quickly understand what requires action.

Option B is correct because Copilot can generate a draft reply based on the context of the email conversation, helping you respond faster while keeping the response aligned to what was discussed. Option C is correct because Copilot can summarize emails—such as unread messages or a thread—by extracting key points, requests, decisions, and suggested next steps, which supports rapid triage.

Option A is not a Copilot task; inserting or customizing an HTML signature is a standard Outlook configuration feature. Option D is also a traditional Outlook management function and is not an AI drafting

/summarization capability.

Therefore, the two tasks you can achieve with Copilot in Outlook are drafting responses and summarizing unread emails.

NEW QUESTION # 71

You receive the following response to a prompt: "Sorry, it looks like I can't respond to this. Let's try a different topic." What is a possible cause of the response?

- A. The prompt is larger than the allowed context window.
- B. The prompt is too vague to elicit a response.
- C. The prompt contains more than five requests.
- D. The prompt contains language that violates safety guidelines.

Answer: D

Explanation:

Microsoft 365 Copilot follows Microsoft's Responsible AI principles and enforces strict content safety policies. When a prompt violates safety guidelines—such as containing harmful, abusive, illegal, or restricted content—the system may refuse to generate a response. The refusal message shown is consistent with safety filtering behavior.

Generative AI systems include moderation layers that evaluate prompts before generating output. If the prompt is classified as unsafe or non-compliant with policy, Copilot blocks the request and encourages the user to try a different topic.

A vague prompt typically results in a generic or clarifying response rather than a refusal. There is no fixed limit of five requests per prompt. Exceeding the context window usually results in truncation or processing errors, not a safety-based refusal message.

Therefore, the most likely cause of the response is that the prompt contains language that violates safety guidelines.

NEW QUESTION # 72

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area		
Statements	Yes	No
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in the web, the response will always be identical.	<input type="radio"/>	<input type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in your own data, the response will always be identical.	<input type="radio"/>	<input type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded only in the model's knowledge, the response will always be identical.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area		
Statements	Yes	No
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in the web, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in your own data, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded only in the model's knowledge, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Answer Area			
Statements	Yes	No	
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in the web, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>	
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded in your own data, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>	
When you submit the same prompt to Microsoft 365 Copilot multiple times, and you are grounded only in the model's knowledge, the response will always be identical.	<input type="radio"/>	<input checked="" type="radio"/>	

All three statements are false because generative AI responses are not guaranteed to be identical even when the prompt is the same. First, when grounded in the web, results can vary due to changing web content, different retrieved sources, or differences in how information is summarized at run time. Second, when grounded in your organization's data, responses can change based on updates to files, emails, meetings, permissions, or which specific items Copilot retrieves as the most relevant context at that moment. Third, even when relying only on the model's general knowledge, large language models are probabilistic: they may choose different wording, structure, examples, or emphasis across runs, especially when temperature /decoding settings and internal routing differ. In business scenarios, this means Copilot outputs should be treated as drafts that may require validation, and repeatability should be improved by adding precise constraints (cite specific sources, use fixed formats, specify exact sections, and request verbatim quotes where appropriate).

NEW QUESTION # 73

Which AI technology is used to understand and interpret images or video?

- A. Computer Vision
- B. Predictive analytics
- C. Speech recognition
- D. Natural Language Processing (NLP)

Answer: A

Explanation:

Computer vision is a branch of AI that enables machines to interpret and understand visual data. It is used in applications like image recognition, facial recognition, and autonomous vehicles.

NEW QUESTION # 74

.....

If you are already determined to obtain an international certificate, you must immediately purchase our AB-730 exam practice. Our products have been certified as the highest quality products in the industry. If you know AB-730 Training Materials through acquaintance introduction, then you must also know the advantages of AB-730. We are both perfect on the quality and the price of the AB-730 study braindumps.
