So it is worthy for them to buy our product. We provide the introduction of the features and advantages of our Plat-UX-101 Test Prep as follow so as to let you have a good understanding of our product before your purchase.

Salesforce Certified Platform User Experience Designer Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which two UX design principles are key to creating excellent mobile user experiences?

Choose 2 answers

- A. Consistency across device experiences
- B. Removal of all images for faster load times
- C. Increase the need for typing with the onscreen keyboard
- D. Prioritization of content and UI elements on the screen

Answer: A,D

Explanation:

The two UX design principles that are key to creating excellent mobile user experiences are:

Consistency across device experiences. This means that the design of a mobile app or website should match the design of the desktop version, as well as other platforms and devices. Consistency helps users to recognize and trust the brand, as well as to navigate and use the product more easily. Consistency also reduces the cognitive load and confusion for users who switch between different devices.¹² Prioritization of content and UI elements on the screen. This means that the design of a mobile app or website should focus on the most important and relevant information and actions for the user, and eliminate or minimize the unnecessary or secondary ones. Prioritization helps users to achieve their goals faster and more efficiently, as well as to avoid distractions and clutter. Prioritization also improves the readability and usability of the product on smaller screens.³⁴

NEW QUESTION # 41

Cloud Kicks has an existing Customer Experience Cloud portal that is performing well.

Which has the highest probability of increasing customer engagement?

- A. Recognizing peers with badges
- B. Choosing personalized branding
- C. Customizing page layouts

Answer: A

Explanation:

In the context of an existing Customer Experience Cloud portal that is already performing well, the goal is to further increase customer engagement by adding elements that encourage interaction and participation. Recognizing peers with badges is a highly effective way to achieve this because:

Personalization and Gamification: Badges introduce an element of gamification and personalization, which can significantly increase engagement. Users are motivated to participate and contribute to the community when they see a tangible recognition of their efforts and achievements.

Community Building: Recognizing contributions with badges helps in building a stronger community by highlighting active members and encouraging others to contribute. It fosters a sense of belonging and appreciation among users.

While personalized branding (option A) and customizing page layouts (option B) can enhance the user experience, they do not directly incentivize user interaction and contribution as effectively as recognizing contributions through badges does.

Reference: For insights on implementing badges and gamification strategies in Salesforce Experience Cloud portals, Salesforce's official documentation and community resources offer guidelines and best practices. These resources discuss various ways to enhance user engagement and community building within the Salesforce ecosystem.

NEW QUESTION # 42

Universal Containers (UC) uses a custom lightning component with an Apex class to display shipment information (custom object, private OWD). UC sales managers are complaining about two important points:

* Shipment records that belong to their teams can be seen by other users.

* Shipment amount should be visible only by managers, but sales reps are able to view it. Which two features did the development team miss that is causing the problems?

Choose 2 answers.

- A. Use isSharable keyword in Apex classes to assure record visibility.
- B. Use runAs in test class to enforce user permissions and field-level permissions.
- **C. Use isAccessible() method in Apex classes to check field accessibility**
- **D. Use With Sharing keyword in Apex classes to enforce sharing rules evaluation.**

Answer: C,D

Explanation:

The development team missed two features that are causing the problems:

The **With Sharing** keyword in Apex classes to enforce sharing rules evaluation. This keyword allows the Apex class to run in the context of the current user and respect the organization's sharing rules. Without this keyword, the Apex class runs in system mode and ignores the sharing rules, which can result in unauthorized access to records that belong to other users .

The **isAccessible()** method in Apex classes to check field accessibility. This method returns true if the current user has read access to the specified field, and false otherwise. Without this method, the Apex class does not check the field-level security settings and can display fields that should be hidden from the user, such as the shipment amount .

1: Using the with sharing or without sharing Keywords

2: Enforcing Sharing Rules in Apex

3: Schema.DescribeFieldResult Class

4: Enforcing CRUD and FLS

NEW QUESTION # 43

A UX designer want to understand the mental model of employees who have requested a new internal community the brief specifies what the employees should be able to do on the site but the designer need to suggest and suitable architecture Which technique should be used

- A. cognitive walkthrough
- B. treetesting
- C. User test
- **D. card sorting**

Answer: D

Explanation:

Card sorting is a UX research method where participants group ideas or information into different categories, based on what feels natural to them. Card sorting is ideal for the early stages of a website project, when the UX designer needs to understand how users organize and label content. Card sorting can help the UX designer to suggest a suitable architecture for the internal community, based on the employees' mental model and expectations. Card sorting can also reveal any gaps or overlaps in the content, and provide insights for naming the categories and subcategories. Card Sorting / Tree Testing | Bentley University, Tree Testing vs. Card Sorting: Which is Right for You? | Maze

NEW QUESTION # 44

A UX Designer is analyzing their Experience Cloud site, enabled for Knowledge articles, and is using the Featured Topic component to display content.

Which UI configuration should be used to further individualize each featured topic?

- A. Add a description displayed on mouse hover further description each topic.
- B. Select and upload SVG Icons that represent each featured topic.
- C. Add a description under the topic label further describing each topic.
- **D. Select and upload images that represent each featured topic.**

Answer: D

Explanation:

The UI configuration that should be used to further individualize each featured topic is to select and upload images that represent each

featured topic. This option allows the UX Designer to customize the appearance of the Featured Topic component and make it more visually appealing and engaging for the users. The images can help to convey the meaning and relevance of each topic and attract the users' attention. The images can also create a consistent and branded look for the Experience Cloud site.

1: Featured Topic Component

2: Customize the Featured Topic Component

This allows users to easily distinguish between different topics and quickly scan for relevant topics. Salesforce documentation on the Featured Topics component states that "You can add a description for each featured topic, which appears in the user interface below the topic label" [1].
