Splunk IT Service Intelligence Certified Admin Sample Questions (Q27-Q32):

NEW QUESTION # 27

What is the default importance value for dependent services' health scores?

- A. 0
- B. 1
- C. Unassigned
- D. 2

Answer: A

Explanation:

Explanation

By default, impacting service health scores have an importance value of 11.

NEW QUESTION # 28

Which of the following describes a realistic troubleshooting workflow in ITSI?

- A. Service Analyzer -> Aggregation Policy -> Deep Dive
- B. Correlation search -> KPI -> Aggregation Policy
- C. Service Analyzer -> Notable Event Review -> Deep Dive
- D. Correlation Search -> Deep Dive -> Notable Event

Answer: D

NEW QUESTION # 29

Which of the following is a valid type of Multi-KPI Alert?

- A. Value over time.
- B. Rise over run.
- C. Score over composite.
- D. Status over time.

Answer: D

NEW QUESTION # 30

Which of the following is a valid type of Multi-KPI Alert?

- A. Status over time.
- B. Rise over run.
- C. Score over composite.
- D. Value over time.

Answer: D

Explanation:

Reference:

B is the correct answer because value over time is a valid type of Multi-KPI Alert in ITSI. A Multi-KPI Alert is a type of alert that triggers when multiple KPIs from one or more services meet certain conditions within a specified time range. Value over time is a condition that compares the current value of a KPI to its previous values over a specified time range. For example, you can create a Multi-KPI Alert that triggers when the CPU usage and memory usage of a service are both higher than their average values in the last 24 hours. Reference: [Create Multi-KPI alerts in ITSI], [Multi-KPI alert conditions in ITSI]

NEW QUESTION # 31

Which of the following accurately describes base searches used for KPIs in a service?

- A. A base search can only be used by its service and all dependent services.
- **B. Base searches can be used for multiple services.**
- C. All the KPIs in a service use the same base search.
- D. All the metrics in a base search are used by one service.

Answer: B

Explanation:

KPI base searches let you share a search definition across multiple KPIs in IT Service Intelligence (ITSI). Create base searches to consolidate multiple similar KPIs, reduce search load, and improve search performance.

Reference:

A base search is a search definition that can be shared across multiple KPIs that use the same data source. Base searches can improve search performance and reduce search load by consolidating multiple similar KPIs. The statement that accurately describes base searches used for KPIs in a service is:

A) Base searches can be used for multiple services. This means that you can create a base search for a service and use it for other services that have similar data sources and KPIs. For example, if you have multiple services that monitor web server performance, you can create a base search that queries the web server logs and use it for all the services that need to calculate KPIs based on those logs.
