最新的 Fortinet NSE 7 NSE7_CDS_AR-7.6 免費考試真題 (Q38-Q43):

問題 #38

A Network security administrator is searching for a solution to secure traffic going in and out of the container infrastructure. In which two ways can Fortinet container security help secure container infrastructures? (Choose two.)

- A. FortiGate NGFW can inspect north-south container traffic with label aware policies.
- B. FortiGate NGFW and FortiWeb can be used to secure container traffic.
- C. FortiGate NGFW can be placed between each application container for north-south traffic inspection.
- D. FortiGate NGFW can connect to the worker nodes and protect the containers.

答案: A,B

問題 #39

An administrator is relying on Azure Bicep linter to find possible issues in Bicep files. Which problem can the administrator expect to find?

- A. Code issues such as unused parameters or variables
- B. Conflicts with the Azure policy for resource configurations
- C. Missing dependencies among resources that could cause failures
- D. Region-specific SKU availability for objects included in the code

答案: A

解題說明:

The Azure Bicep linter analyzes the structure and syntax of Bicep files to identify code issues, such as unused parameters, variables, incorrect syntax, or deprecated properties. It does not validate runtime issues like resource dependencies, policy conflicts, or region-specific SKUs.

問題 #40

Refer to the exhibit. What would be the impact of confirming to delete all the resources in Terraform?

```
Do you really want to destroy all resources?  
Terraform will destroy all your managed infrastructure, as shown above.  
There is no undo. Only 'yes' will be accepted to confirm.  
Enter a value: yes  
  
aws_network_interface_sg_attachment.publicattachment: Destroying... [id=sg-07|  
aws_route.externalroute: Destroying... [id=r-rtb-07301520ef1fd3c5c1080289494]  
aws_route_table_association.publicassociate: Destroying... [id=rtbassoc-0142  
aws_network_interface_sg_attachment.internalattachment: Destroying... [id=sg-|  
aws_eip.FGTPublicIP: Destroying... [id=eipalloc-089e0464d18c2324d]  
aws_route_table_association.internalassociate: Destroying... [id=rtbassoc-020  
aws_route.internal route: Destroying... [id=r-rtb-0a3d10220e4ed7b221080289494]  
aws_route_table_association.publicassociate: Destruction complete after os  
aws_route_table_association.internalassociate: Destruction complete after Os
```

- A. It destroys all the resources tied to the AWS Identity and Access Management (IAM) user.
- B. It destroys all the resources in the state file.
- C. It destroys all the resources in the resource group.
- D. It destroys all the resources in the .tfvars file.

答案: B

解題說明:

When you confirm a terraform destroy, Terraform deletes all resources that are tracked in its state file. The state file represents the managed infrastructure, so only those resources defined and tracked there will be destroyed.

問題 #41

You are automating configuration changes on one of the FortiGate VMs using Linux Red Hat Ansible. How does Linux Red Hat Ansible connect to FortiGate to make the configuration change?

- A. It uses a YAML file.
- B. It uses a FortiGate VIP.
- C. It uses SSH.
- D. It uses an API.

答案: D

解題說明：

Ansible connects to FortiGate through APIs (REST API/HTTPS) when using Fortinet Ansible modules. The YAML playbook defines the tasks, but the actual configuration changes are pushed via the FortiGate API.

問題 #42

Refer to the exhibit. You have deployed a Linux EC2 instance in Amazon Web Services (AWS) with the settings shown in the exhibit.

What next step must the administrator take to access this instance from the internet?

- A. Configure the user name and password.
- B. Enable SSH and allocate it to the device.
- C. Create a VIP on FortiGate to allow access.
- D. Allocate an Elastic IP address and assign it to the instance.

答案：D

解題說明：

In the exhibit, Auto-assign public IP is disabled, meaning the instance has no public IP for internet access. To make the Linux EC2 instance reachable from the internet, the administrator must allocate an Elastic IP address and assign it to the instance.
