最新的 Pesticide Applicator Category-7A-General-and-Household-Pest-Control 免費考試真題 (Q50-Q55):

問題 #50
For pesticide applications performed on school property, the commercial pesticide applicator is:

- A. Required to provide pesticide application information to the School IPM Coordinator if requested but not conduct the notification

- B. Required to notify students, faculty, and staff as schools are not required to notify students, faculty, and staff
- C. Required to notify the School IPM Coordinator as well as the students, faculty, and staff

答案：C

解題說明：
Under the New Jersey School IPM Act (N.J.A.C. 7:30-13), commercial pesticide applicators must notify the School IPM Coordinator and students, faculty, and staff of pesticide applications on school property. This includes advance notice (at least 72 hours prior) and posting signs at the application site.
TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 4: IPM in Schools) aligns with these requirements. Option A is incorrect because schools are also required to notify, but the applicator has a direct responsibility. Option C is incorrect, as notification is mandatory, not optional.

問題 #51
The IPM style of pest control includes:

- A. Pre-established pesticide applications according to a schedule
- B. One-time reactive pesticide applications
- C. A reduction of pesticide use

答案：C

解題說明：
Integrated Pest Management (IPM) focuses on sustainable pest control by minimizing pesticide use and integrating multiple control methods (e.g., cultural, mechanical, biological). TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 4: IPM) highlights that IPM aims for a reduction of pesticide use through prevention and non-chemical methods. Option A (pre- established applications) contradicts IPM's reactive, need-based approach. Option B (one-time reactive applications) may be part of IPM but does not capture its broader goal of reducing pesticide reliance.

問題 #52
The wasp most likely to sting is the:

- A. Yellow jacket
- B. Honeybee
- C. Mud dauber

答案：A

解題說明：
Yellow jackets are aggressive social wasps and are the most likely to sting, especially when their nest is disturbed. TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter
7: Wasps) notes their defensive behavior. Option A (honeybee) can sting but typically only once, as they die after stinging. Option C (mud dauber) is a solitary wasp and less likely to sting unless provoked.

問題 #53
Carpenter ants:

- A. Make transportation tubes from the chewed wood
- B. Feed on the chewed wood from their cavities
- C. Discard the wood from their galleries

答案：C

解題說明：
Carpenter ants excavate wood to create galleries for nesting but do not feed on it; they discard the wood as sawdust-like frass outside their galleries. TheGeneral Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Ants) notes that this frass is a key sign of carpenter ant activity. Option A (feed on the wood) is incorrect, as they feed on insects and sugary substances.

Option B (make transportation tubes) applies to termites, not carpenter ants.

問題 #54
Written notification for single-family residences must include the:

- A. Name of the pesticide used
- B. Full pesticide label directions
- C. Exact date of application

答案：C

解題說明：
For single-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require written notification to include the exact date of application to inform residents of when the treatment will occur. Option B (full pesticide label directions) is not required in the notification, though the label must be followed.
Option C (name of the pesticide) is typically included in post-application notices but is not mandatory in the pre-application written notification.
