

Exam Databricks Databricks-Certified-Professional-Data-Engineer Forum | Databricks-Certified-Professional-Data-Engineer Fresh Dumps

We learned that a majority of the candidates for the exam are office workers or students who are occupied with a lot of things, and do not have plenty of time to prepare for the Databricks-Certified-Professional-Data-Engineer exam. So we have tried to improve the quality of our training materials for all our worth. Now, I am proud to tell you that our training materials are definitely the best choice for those who have been yearning for success but without enough time to put into it. There are only key points in our Databricks-Certified-Professional-Data-Engineer Training Materials. That is to say, you can pass the Databricks-Certified-Professional-Data-Engineer exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our training materials.

Databricks Certified Professional Data Engineer certification exam is a highly sought-after certification in the data engineering industry. It is designed to test the skills and knowledge of data engineers who work with Databricks, a cloud-based platform that helps organizations manage large amounts of data and perform advanced analytics.

100% Pass 2026 Databricks-Certified-Professional-Data-Engineer: Databricks Certified Professional Data Engineer Exam Perfect Exam Forum

For candidates, one of the most important things for you is to know the latest information of the exam. Databricks-Certified-Professional-Data-Engineer Training Materials of us will meet your needs. And our system will send the latest version to you automatically, so that you can know the recent information. We have free update for one year, that is to say, you can get free update

version for 365 days after purchasing. In addition, we will pass guarantee and money back guarantee.

Databricks is a leading company in the field of data engineering and machine learning. The company offers a wide range of services and tools to help organizations manage and analyze their data more effectively. One of the key offerings from Databricks is the Databricks Certified Professional Data Engineer (Databricks-Certified-Professional-Data-Engineer) certification exam. Databricks-Certified-Professional-Data-Engineer Exam is designed to test the skills and knowledge of data engineers who work with Databricks.

Databricks Certified Professional Data Engineer Exam Sample Questions (Q204-Q209):

NEW QUESTION # 204

A data engineer wants to refactor the following DLT code, which includes multiple definition with very similar code:

□ In an attempt to programmatically create these tables using a parameterized table definition, the data engineer writes the following code.

□ The pipeline runs an update with this refactored code, but generates a different DAG showing incorrect configuration values for tables.

How can the data engineer fix this?

- A. Load the configuration values for these tables from a separate file, located at a path provided by a pipeline parameter.
- B. Wrap the loop inside another table definition, using generalized names and properties to replace with those from the inner table
- C. Convert the list of configuration values to a dictionary of table settings, using different input the for loop.
- **D. Convert the list of configuration values to a dictionary of table settings, using table names as keys.**

Answer: D

Explanation:

The issue with the refactored code is that it tries to use string interpolation to dynamically create table names within the `tbl decorator`, which will not correctly interpret the table names. Instead, by using a dictionary with table names as keys and their configurations as values, the data engineer can iterate over the dictionary items and use the keys (table names) to properly configure the table settings. This way, the decorator can correctly recognize each table name, and the corresponding configuration settings can be applied appropriately.

NEW QUESTION # 205

The data science team has created and logged a production model using MLflow. The following code correctly imports and applies the production model to output the predictions as a new DataFrame named `preds` with the schema "customer_id LONG, predictions DOUBLE, date DATE".

□ The data science team would like predictions saved to a Delta Lake table with the ability to compare all predictions across time. Churn predictions will be made at most once per day.

Which code block accomplishes this task while minimizing potential compute costs?

- A. □
- B. □
- C. `preds.write.format("delta").save("/preds/churn_preds")`
- D. □
- **E. `preds.write.mode("append").saveAsTable("churn_preds")`**

Answer: E

NEW QUESTION # 206

You are currently working on storing data you received from different customer surveys, this data is highly unstructured and changes over time, why Lakehouse is a better choice compared to a Data warehouse?

- **A. Lakehouse supports schema enforcement and evolution, traditional data warehouses lack schema evolution.**
- B. Lakehouse supports ACID
- C. Lakehouse supports primary and foreign keys like a data warehouse
- D. Lakehouse supports SQL

- E. Lakehouse enforces data integrity

Answer: A

NEW QUESTION # 207

Which of the following commands will return records from an existing Delta table `my_table` where duplicates have been removed?

- A. 1. `MERGE INTO my_table a`
2. `USING new_records b ON a.id = b.id`
3. `WHEN NOT MATCHED`
4. `THEN INSERT *;`
- B. 1. `MERGE INTO my_table a`
2. `USING new_records b;`
- C. 1. `DROP DUPLICATES`
2. `FROM my_table;`
- D. 1. `SELECT *`
2. `FROM my_table`
3. `WHERE duplicate = False;`
- E. 1. `SELECT DISTINCT *`
2. `FROM my_table;`

Answer: E

NEW QUESTION # 208

Which REST API call can be used to review the notebooks configured to run as tasks in a multi-task job?

- A. `/jobs/runs/list`
- B. `/jobs/get`
- C. `/jobs/runs/get-output`
- D. `/jobs/runs/get`
- E. `/jobs/list`

Answer: B

Explanation:

This is the correct answer because it is the REST API call that can be used to review the notebooks configured to run as tasks in a multi-task job. The REST API is an interface that allows programmatically interacting with Databricks resources, such as clusters, jobs, notebooks, or tables. The REST API uses HTTP methods, such as GET, POST, PUT, or DELETE, to perform operations on these resources. The `/jobs/get` endpoint is a GET method that returns information about a job given its job ID. The information includes the job settings, such as the name, schedule, timeout, retries, email notifications, and tasks. The tasks are the units of work that a job executes. A task can be a notebook task, which runs a notebook with specified parameters; a jar task, which runs a JAR uploaded to DBFS with specified main class and arguments; or a python task, which runs a Python file uploaded to DBFS with specified parameters. A multi-task job is a job that has more than one task configured to run in a specific order or in parallel. By using the `/jobs/get` endpoint, one can review the notebooks configured to run as tasks in a multi-task job.
