Desktop SAP Certified Associate - Integration Developer (C\_CPI\_2506) practice test software is the first format available at Real4exams. This format can be easily used on Windows PCs and laptops. The SAP C\_CPI\_2506 practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this SAP Certified Associate - Integration Developer (C\_CPI\_2506) desktop-based practice test software is that it includes multiple mock tests that have SAP C\_CPI\_2506 practice questions identical to the actual exam, providing users with a chance to get SAP Certified Associate - Integration Developer (C\_CPI\_2506) real exam experience before even attempting it.

### SAP C\_CPI\_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li> </ul>

Now that more people are using mobile phones to learn our C\_CPI\_2506 study guide, you can also choose the one you like. We have three versions of our C\_CPI\_2506 Exam Braindumps: the PDF, the Software and the APP online. And you can free download the demo s to check it out.

## SAP Certified Associate - Integration Developer Sample Questions (Q46-Q51):

### NEW QUESTION # 46

What are target endpoints of an API? Note: There are 3 correct answers to this question.

- A. Resources
- B. API proxy
- C. API consumer
- D. API provider
- E. URL of original API

**Answer: B,D,E**

Explanation:

the target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

### NEW QUESTION # 47

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, body, attachment
- B. Header, body, properties
- C. Header, properties, attachment
- D. Header, Exchange ID, in-message

**Answer: A**

Explanation:

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats. Reference: The Camel Data Model in a Nutshell | SAP Help Portal, Data Formats :: Apache Camel

#### NEW QUESTION # 48

What must you do to find out which entity sets are available in the OData V2.0 interface?

- A. Contact the OData interface manufacturer
- **B. Retrieve the metadata document form the interface.**
- C. Retrieve the service document from the interface.
- D. Search in the Global Directory of all available OData interfaces.

**Answer: B**

Explanation:

To find out which entity sets are available in the OData V2.0 interface, you must retrieve the metadata document from the interface. The metadata document is an XML document that describes the data model of the OData service, including the entity types, entity sets, associations, functions, and actions. The metadata document can be accessed by appending \$metadata to the service root URL of the OData service. For example, if the service root URL is <https://services.odata.org/OData/OData.svc/>, then the metadata document URL is [https://services.odata.org/OData/OData.svc/\\$metadata](https://services.odata.org/OData/OData.svc/$metadata). The metadata document can be used to discover the structure and capabilities of the OData service and to generate client code or proxies. Reference: Overview (OData Version 2.0) | OData - The Best Way to REST, OData API v2 Reference | SAP Help Portal

#### NEW QUESTION # 49

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- **A. XML**
- B. JSON
- C. XSLT

**Answer: A**

Explanation:

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel. Reference: Modernize Integration with SAP Integration Suite | openSAP

#### NEW QUESTION # 50

You configured a content modifier as follows: Action: Create | Name: ProductID | Source Type: XPath Source Value: //ProductID | Data Type: java.lang.string. After testing the content modifier, you receive an error message that contains the following fragment: "Java.lang.ClassNotFoundException: java.lang.string..." What caused the error message?

- A. Incorrect source type
- **B. Incorrect data type**
- C. Incorrect name
- D. Incorrect source value

**Answer: B**

Explanation:

In SAP Cloud Integration, when defining Content Modifier properties, the Java data type names are case- sensitive.

Correct type # java.lang.String

In the configuration, java.lang.string was used (lowercase "s"), which causes a ClassNotFoundException, since Java cannot find the class.

Other options are correct in form:

Source Type = XPath # Valid.

Source Value = //ProductID # Valid XPath.

Name = ProductID # Valid.

Thus, the error occurred because of incorrect data type specification.

## NEW QUESTION # 51

.....

Our C\_CPI\_2506 guide questions are suitable for various people. No matter you are students, office workers or common people, you can have a try. For our C\_CPI\_2506 practice braindumps are famous for the reason that they are high-effective. We can claim that if you study with them for 20 to 30 hours, then you can take part in the C\_CPI\_2506 Exam confidently if you finish all learning tasks. The C\_CPI\_2506 certificate issued by official can inspire your enthusiasm.
