The field of SAP is growing rapidly and you need the SAP C\_S4CPB\_2502 certification to advance your career in it. But clearing the C\_S4CPB\_2502 test is not an easy task. Applicants often don't have enough time to study for the C\_S4CPB\_2502 Exam. They are in desperate need of real SAP C\_S4CPB\_2502 exam questions which can help them prepare for the C\_S4CPB\_2502 test successfully in a short time.

### SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q56-Q61):

#### NEW QUESTION # 56

What is the correct release code for the second feature delivery in February 2025?

- A. 2502.2
- B. 2025.2.2
- C. 2025.2
- D. 0

**Answer: A**

Explanation:

The release code for SAP S/4HANA Cloud Public Edition follows the format YYYY.MM.X, where YYYY is the year, MM is the month, and X is the feature delivery number. The first feature delivery is always in February, and the second feature delivery is always in May. Therefore, the release code for the second feature delivery in February 2025 is 2502.2. References = Navigating Release Upgrades, SAP S/4HANA Cloud, Public Edition 2308 Release

#### NEW QUESTION # 57

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Extensibility using the Legacy System Migration Workbench
- B. Mapping source values to SAP S/4HANA target values
- C. Combining the local and remote schema approaches into one migration project
- D. Guidance and simulation of the migration process

**Answer: B,D**

Explanation:

The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:

\* It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.

\* It provides guidance and simulation of the migration process, as well as error handling and monitoring.

This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.

\* It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.

\* It does not combine the local and remote schema approaches into one migration project. The SAP S

/4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.

### NEW QUESTION # 58

Which activities can you complete in the Maintain Business Roles SAP Fiori app? Note: There are 2 correct answers to this question.

- A. Assign business catalogs to a business role
- B. Maintain technical catalogs
- C. Maintain restrictions
- D. Assign PFCG profiles to a business role

**Answer: A,C**

### NEW QUESTION # 59

To which partner role does the IT Contact first assign access permission for SAP Cloud ALM?

- A. Communication contact
- B. Lead configuration expert
- C. Project manager
- D. LoB configuration expert

**Answer: C**

Explanation:

The IT Contact is the person who receives the welcome email from SAP and is responsible for setting up the initial access to SAP Cloud ALM. The IT Contact needs to eventually provide all project team members access to SAP Cloud ALM, but it's most important the partner and customer project managers are given access first, because they are responsible for setting up the implementation project and assigning tasks to the other project team members<sup>1</sup>. The project manager is a partner role that has the authorization to create and manage projects in SAP Cloud ALM<sup>2</sup>. References = Setting up the Implementation Project in SAP Cloud ALM, Teams, Roles, and Access Restrictions | SAP Help Portal In the context of SAP Cloud ALM (Application Lifecycle Management), the IT Contact is typically responsible for the initial setup and assignment of roles within the project. The first role to which the IT Contact often assigns access permission is:

\* Project manager: The project manager plays a crucial role in overseeing the SAP project's planning, execution, and completion. By assigning access permission to the project manager first, the IT Contact ensures that the project manager has the necessary tools and insights to manage the project effectively within SAP Cloud ALM. This access allows the project manager to monitor project progress, manage resources, and make informed decisions, facilitating successful project execution and alignment with business goals.

Granting the project manager access to SAP Cloud ALM is a strategic decision that empowers them to lead the project efficiently, leveraging the platform's capabilities for project management, monitoring, and collaboration.

### NEW QUESTION # 60

Which of the following activities are completed in the Realize phase of the SAP Activate Methodology? Note: There are 2 correct answers to this question.

- A. Gather perceived change impact feedback
- B. Enter configuration values in SAP Central Business Configuration
- C. Demonstrate where to find business process documentation
- D. Set up manual test cases in SAP Cloud ALM

**Answer: B,D**

### NEW QUESTION # 61

.....
