Microsoft AZ-140 Test Discount | Vce AZ-140 File

ActualTestsIT made an AZ-140 Questions for the students so that they don't get confused to prepare for Configuring and Operating Microsoft Azure Virtual Desktop (AZ-140) certification exam successfully in a short time. ActualTestsIT has designed the real AZ-140 exam dumps after consulting many professionals and receiving positive feedback. The Configuring and Operating Microsoft Azure Virtual Desktop (AZ-140) questions have many premium features, so you don't face any hurdles while preparing for Configuring and Operating Microsoft Azure Virtual Desktop (AZ-140) exam and pass it with good grades.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q125-Q130):

NEW QUESTION # 125

You have an Azure Virtual Desktop deployment that contains the resources shown in the following table.

Name	Description
Host1	Windows 11 personal session host without a public IP address
Bastion1	Azure Bastion Basic SKU

You have a Windows 11 device named Device1 that has Azure Command-Line Interface (CLI) installed.

You need to use Remote Desktop Connection (mstsc.exe) on Device1 to connect to Host1.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

- On Host1, enable just-in-time (JIT) VM access.
- On Bastion1, enable Kerberos authentication.
- Change Bastion1 to the Standard SKU.
- On Bastion1, select **Native Client Support**.
- On Device1, run the `az network bastion rdp` command.

NEW QUESTION # 126

Case Study 3 - Northwind Traders

Overview

Northwind Traders is a manufacturing company based in New York City.

Existing Environment

Identity Environment

The on-premises network contains an Active Directory Domain Services (AD DS) domain named northwindtraders.com.

Northwind Traders has a Microsoft Entra tenant and a Microsoft Entra Domain Services managed domain. The northwindtraders.com domain syncs with the Microsoft Entra tenant.

The northwindtraders.com domain syncs with the Microsoft Entra tenant.

Virtual Machines

The company has an on-premises Hyper-V virtual machine named VM1 that has the following configurations:

- Generation: 1
- Disk size: 2 TB
- Disk format: VHDX
- Disk type: Dynamically expanding

Cloud Services

Northwind Traders has a Microsoft 365 E5 subscription. The subscription contains 500 users that are assigned Microsoft 365 E5 licenses.

The company has an Azure subscription that contains the resources shown in the following table.

Name	Type	Location	Configuration
storage1	Storage account	East US	Contains an Azure Files share named share1
VNet1	Virtual network	East US	Not applicable

Both subscriptions are linked to the Microsoft Entra tenant.

Requirements

Planned Changes

Northwind Traders identifies the following planned changes:

- Deploy an Azure Virtual Desktop host pool that will contain 10 session hosts joined to the Microsoft Entra Domain Services managed domain.
- Configure VM1 as the source image for the Azure Virtual Desktop deployment and upload the image to Azure.
- The Azure Virtual Desktop deployment will provide access to a custom app named App1.

Performance Requirements

Northwind Traders identifies the following performance requirements:

- Each Azure Virtual Desktop session host must support 15 user sessions.
- Each new user session must be assigned to a single session host until the maximum session limit is reached for that host.

Application Requirements

Northwind Traders identifies the following application requirements:

- Microsoft OneDrive must launch when users connect to a RemoteApp session in Azure Virtual Desktop.
- App1 requires a desktop resolution of 1280 x 1024.
- Administrative effort must be minimized.

Disaster Recovery Requirements

Northwind Traders identifies the following disaster recovery requirements for the Azure Virtual Desktop deployment:

- Minimize outages if an Azure region fails.
- Minimize the recovery time objective (RTO).
- Minimize administrative effort in the event of a failover.

Security Requirements

Northwind Traders identifies the following security requirements:

- When users sign in to the Azure Virtual Desktop deployment by using the Azure Virtual Desktop client, they must authenticate by using their Microsoft Entra username and password only.
- When users sign in to the Azure Virtual Desktop deployment by using a web browser, they must authenticate by using the Microsoft Authenticator app.
- All the Azure Virtual Desktop session hosts deployed by using the VM1 source image must be onboarded to Microsoft Defender for Endpoint.
- The client version and operating system used to connect to the session hosts must be logged.
- The solution must follow the principle of least privilege.

Networking Requirements

The Azure Virtual Desktop session hosts must be able to access the resources on the on-premises network.

User Profile Requirements

Northwind Traders identifies the following user profile requirements:

- Users must be able to access share1 by using their Microsoft Entra account.
- Azure Virtual Desktop user profiles must be managed by using FSLogix.
- All user profiles must be stored in share1.

Hotspot Question

Which type of host pool and load balancing algorithm should you configure to meet the performance requirements? To answer, select the appropriate options in the answer area.

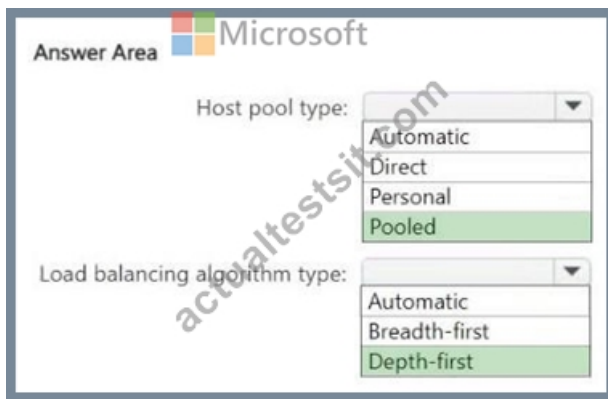

NOTE: Each correct selection is worth one point.

The screenshot shows a Microsoft Answer Area interface. It contains two dropdown menus. The first dropdown is labeled 'Host pool type:' and has four options: Automatic, Direct, Personal, and Pooled. The second dropdown is labeled 'Load balancing algorithm type:' and has three options: Automatic, Breadth-first, and Depth-first. A watermark 'actualtestst.com' is visible across the interface.

Answer:

Explanation:

Explanation:

Box 1: Pooled

To support 15 user sessions in Azure Virtual Desktop, you would generally use a pooled host pool. This type of host pool allows multiple users to connect to the same virtual machine (VM) simultaneously.

Box 2: Depth-first

The following load balancing algorithms are available for pooled host pools:

* Breadth-first, which aims to evenly distribute new user sessions across the session hosts in a host pool. You don't have to specify a maximum session limit for the number of sessions.

* Depth-first, which keeps starting new user sessions on one session host until the maximum session limit is reached. Once the session limit is reached, any new user connections are directed to the next session host in the host pool until it reaches its session limit, and so on.

NEW QUESTION # 127

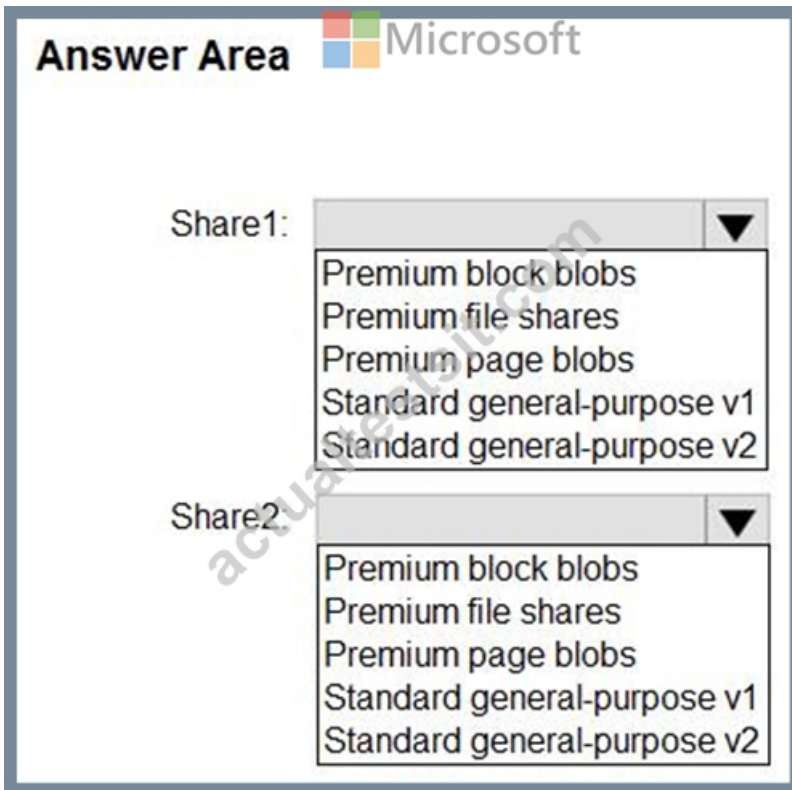

-

You plan to deploy two Azure file shares named Share1 and Share2 that will be used with Azure Virtual Desktop. Share1 will contain at least 100 GB of data and must be stored on SSDs. Share2 must be able to switch between Transaction optimized and Cool storage tiers and must be stored on HDDs.

You need to recommend which type of storage accounts to use for the shares. The solution must minimize costs.

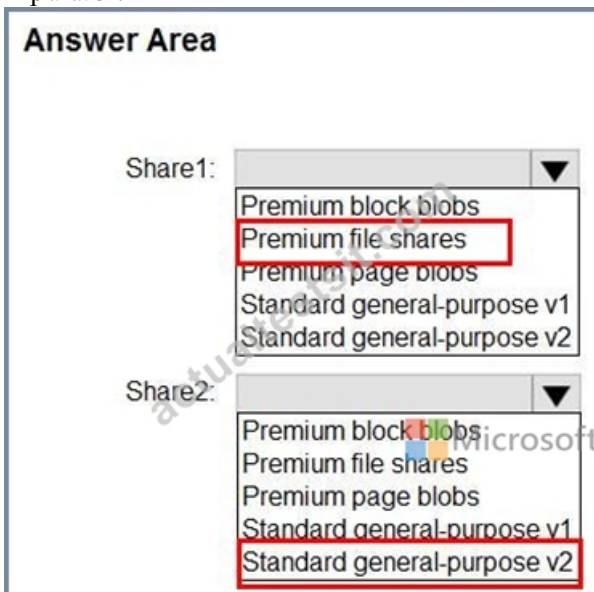

What should you recommend for each share? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://learn.microsoft.com/en-us/azure/storage/files/storage-how-to-create-file-share?tabs=azure-portal>

NEW QUESTION # 128

You have a Windows Virtual Desktop deployment.

You need to ensure that all the connections to the managed resources in the host pool require multi-factor authentication (MFA).

Which two settings should you modify in a conditional access policy? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

New

Conditional access policy

Control user access based on conditional access policy to bring signals together, to make decisions, and enforce organizational policies. [Learn more](#)

NEW QUESTION # 129

You have an Azure Virtual Desktop deployment.

Users connect to session hosts by using devices enrolled in Microsoft Intune.

You need to create a Conditional Access policy named Policy1 to meet the following requirements:

* Require multifactor authentication (MFA).

* Require that the devices be marked as compliant.

Which settings of Policy1 should you configure for each requirement? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Require MFA: Grant

Require that the devices be marked as compliant: Grant

Answer:

Explanation:

Require MFA: Grant

Require that the devices be marked as compliant: Grant

NEW QUESTION # 130

.....

ActualTestsIT online digital AZ-140 exam questions are the best way to prepare. Using our AZ-140 exam dumps, you will not have to worry about whatever topics you need to master. The AZ-140 practice test ActualTestsIT keeps track of each previous attempt and highlights the improvements with each attempt. The AZ-140 Mock Exam setup can be configured to a particular style & arrive at unique questions. Microsoft AZ-140 practice exam went through real-world testing with feedback from more than 90,000 global professionals before reaching its latest form.
