

1Z0-1072-25 Latest Dumps Free | Latest 1Z0-1072-25 Exam Vce

What's more, part of that VCEEngine 1Z0-1072-25 dumps now are free: https://drive.google.com/open?id=1ByGQyOE4R_s5TPxzSXnAco0zr3r4_ixJ

Our Oracle 1Z0-1072-25 exam questions will correct your learning problems with the help of the test engine. All contents of 1Z0-1072-25 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our Oracle 1Z0-1072-25 Quiz guide.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block File Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.

Topic 2	<ul style="list-style-type: none"> • Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.
Topic 3	<ul style="list-style-type: none"> • Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.
Topic 4	<ul style="list-style-type: none"> • Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources

High-quality 1Z0-1072-25 Latest Dumps Free Help You Pass Success Your 1Z0-1072-25: Oracle Cloud Infrastructure 2025 Architect Associate Exam Efficiently

If you purchase our Oracle Cloud Infrastructure 2025 Architect Associate guide torrent, we can make sure that you just need to spend twenty to thirty hours on preparing for your exam before you take the exam, it will be very easy for you to save your time and energy. So do not hesitate and buy our 1Z0-1072-25 study torrent, we believe it will give you a surprise, and it will not be a dream for you to pass your Oracle Cloud Infrastructure 2025 Architect Associate exam and get your certification in the shortest time.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q30-Q35):

NEW QUESTION # 30

Why was SSH still possible after port 22 was removed from the Security Lists?

- A. The VCN where that compute instance resides still has a route rule.
- B. The VNIC of that compute instance is attached to a Cluster Network.
- C. The VCN where that compute instance resides still has an Internet Gateway.
- **D. The VNIC of that compute instance is attached to a Network Security Group (NSG).**

Answer: D

Explanation:

Even after removing port 22 from the Security Lists, SSH was still possible because the Virtual Network Interface Card (VNIC) of the compute instance is attached to a Network Security Group (NSG).

NSGs: NSGs provide a more flexible and granular way to manage security rules compared to Security Lists. They allow you to apply security rules directly to VNICs associated with resources such as compute instances. If an NSG allows traffic on port 22, SSH will still be possible, regardless of the Security List settings.

NEW QUESTION # 31

What is the primary function of the Network Path Analyzer (NPA) tool provided by Oracle Cloud Infrastructure (OCI)?

- A. Optimizing network performance by dynamically adjusting routing paths based on traffic patterns
- B. Sending actual traffic between source and destination to diagnose connectivity issues
- C. Providing real-time monitoring of network traffic to detect security threats and unauthorized access attempts

- **D. Collecting and analyzing network configuration to identify virtual network configuration issues impacting connectivity**

Answer: D

Explanation:

The primary function of the Network Path Analyzer (NPA) tool in Oracle Cloud Infrastructure (OCI) is to help users troubleshoot and diagnose network connectivity issues by analyzing the network path between a source and a destination within OCI. The tool collects and analyzes the configuration of the virtual network, identifying any misconfigurations or issues that might impact connectivity.

NPA Usage: The Network Path Analyzer allows administrators to trace the network path and check for issues such as incorrect security list rules, route table misconfigurations, or any other factors that could prevent network traffic from reaching its destination.

NEW QUESTION # 32

Why is the Network Visualizer tool valuable for managing virtual network infrastructure on OCI?

- **A. It visualizes the topology of all VCNS in a selected region and tenancy.**
- B. It offers real-time monitoring of network traffic.
- C. It generates automated reports on network performance metrics.
- D. It provides detailed information about the physical network components.

Answer: A

Explanation:

The Network Visualizer tool in Oracle Cloud Infrastructure is valuable because it visualizes the topology of all Virtual Cloud Networks (VCNs) in a selected region and tenancy.

Topology Visualization: The Network Visualizer provides a graphical representation of the network components and their relationships within a VCN, including subnets, route tables, gateways, and security lists. This visualization helps users understand the network architecture and troubleshoot issues effectively.

Other Options:

Real-time monitoring of network traffic (B), detailed information about physical network components (C), and automated reports on network performance metrics (D) are not the primary functions of the Network Visualizer. These functionalities are typically handled by other OCI services or tools.

Relevant OCI Documentation:

Network Visualizer Overview

This documentation details the features and benefits of the Network Visualizer tool in OCI.

NEW QUESTION # 33

Which statement is true about File System Replication in Oracle Cloud Infrastructure (OCI)?

- **A. You can replicate the data in one file system to another file system in the same region or a different region.**
- B. You can replicate the data in one file system to another file system only in the same region.
- C. You cannot specify a replication interval when you create the replication resource.
- D. Only a file system that has been exported can be used as a target file system.

Answer: A

Explanation:

File System Replication in Oracle Cloud Infrastructure (OCI) allows you to replicate data from one file system to another either within the same region or across different regions. This capability is particularly useful for disaster recovery, data protection, and global data distribution scenarios.

Cross-Region Replication: The replication feature enables you to create a copy of your file system in a different region, ensuring that your data is available even in the event of a regional failure.

Same-Region Replication: You also have the option to replicate data within the same region, which can be useful for scenarios such as high availability and local backups.
