Answers AZ-700 Free | AZ-700 Valid Test Fee

What's more, part of that TestkingPDF AZ-700 dumps now are free: https://drive.google.com/open?id=1ak6Fn0IjBWVsCxC0Fad3hvvlBjxpysD4

The TestkingPDF is a leading platform that offers real, valid, and subject matter expert's verified AZ-700 exam questions. These AZ-700 exam practice questions are particularly designed for fast Designing and Implementing Microsoft Azure Networking Solutions (AZ-700) exam preparation. The TestkingPDF AZ-700 exam questions are designed and verified by experienced and qualified Microsoft AZ-700 Exam trainers. They work together and put all their expertise and experience to ensure the top standard of TestkingPDF AZ-700 exam practice questions all the time.

Services like quick downloading within five minutes, convenient and safe payment channels made for your convenience. Even newbies will be tricky about this process on the AZ-700 exam questions. Unlike product from stores, quick browse of our AZ-700 preparation quiz can give you the professional impression wholly. So, they are both efficient in practicing and downloading process. We also have free demo of AZ-700 training guide as freebies for your reference to make your purchase more effective.

AZ-700 Valid Test Fee & AZ-700 Latest Exam Book

Our company's top AZ-700 exam braindumps are meant to deliver you the best knowledge on this subject. If you study with our AZ-700 study guide, you will find that not only you can get the most professional and specialized skills to solve the problems in you dialy work, but also you can pass the exam without difficulty and achieve the certification. What is more, the prices of our AZ-700 training engine are quite favorable.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q122-Q127):

NEW QUESTION # 122
You have an Azure subscription that contains a virtual network named VNet1.
You deploy several web apps and configure the apps to use private endpoints on VNet1.
You need to identify which DNS records the web apps registered automatically.
Where will the records be created?

- A. an Azure DNS zone named azurewebsites.net
- B. an Azure DNS zone named privatelink.azurewebsites.net
- C. an Azure Private DNS zone named azurewebsites.net
- D. an Azure Private DNS zone named privatelink.azurewebsites.net

Answer: D

Explanation:
On creating a private endpoint in portal:
Your private endpoint will be integrated with the private DNS zone 'privatelink.azurewebsites.net' in the resource group of the selected subnet. If the private DNS zone does not exist, it will be created automatically.

NEW QUESTION # 123
You have the Azure virtual networks shown in the following table.

You deploy Azure Firewall to Vnet3.
You need to ensure that the traffic from Subnet1-1 to Subnet2-1 passes through the firewall. What should you configure?

- A. a route table associated to AzureFitewallSubnet
- B. peering links between Vnet1 and Vnet2
- C. a route table associated to Subnet1 -1 and Subnet2-1
- D. an Azure private DNS zone

Answer: A

NEW QUESTION # 124
Your company has 40 branch offices across North America and Europe. You have an Azure subscription that contains the following virtual networks:
* Two networks in the East US Azure region
* Three networks in the West Europe Azure region
You need to implement Azure Virtual WAN. The solution must meet the following requirements:
* Each branch office in North America must have an ExpressRoute circuit and a Site-to-Site VPN that connects to the East US region.
* Each branch office in Europe must have an ExpressRoute circuit and a Site-to-Site VPN that connects to the West Europe region.
* Transitive connections must be supported between all the branch offices and all the virtual networks.
* Costs must be minimized.
What is the minimum number of Virtual WAN resources required? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 125
You have an Azure subscription mat contains tour virtual networks named VNet1, VNet2, VNet3, and VNet4.
You plan to deploy a hub and spoke topology by using virtual network peering.
You need to configure VNet1 as the hub network. The solution must meet the following requirements:
- Support transitive routing between spokes.
- Maximize network throughput.
What should you include in the solution?

- A. Azure VPN Gateway
- B. Azure Route Server
- C. Azure Firewall
- D. Azure Private Link

Answer: C

Explanation:
If you need connectivity between spokes, consider deploying Azure Firewall or another NVA in the hub. Then create routes to forward traffic from a spoke to the firewall or NVA, which can then route to the second spoke. In this scenario, you must configure the peering connections to allow forwarded traffic.
You can also use a VPN gateway to route traffic between spokes, although this choice affects latency and throughput. For configuration details, see Configure VPN gateway transit for virtual network peering.
https://learn.microsoft.com/en-us/azure/architecture/reference-architectures/hybrid- networking/hub-spoke?tabs=cli

NEW QUESTION # 126
You have five virtual machines that run Windows Server. Each virtual machine hosts a different web app.
You plan to use an Azure application gateway to provide access to each web app by using a hostname of www.contoso.corn and a different URL path for each web app, for example: https://www.contoso.com/app1.
You need to control the flow of traffic based on the URL path.
What should you configure?

- A. rewrites
- B. rules
- C. HTTP settings
- D. listeners

Answer: B

Explanation:
Reference:
https://docs.microsoft.com/en-us/azure/application-gateway/url-route-overview
Topic 1, Contoso
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab. note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.
Existing Environment:
Azure Network Infrastructure
Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com.
The Azure subscription contains the virtual networks shown in the following table.
□
Vnet1 contains a virtual network gateway named GW1.
Azure Virtual Machines
The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.
□
The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.
An application security group named ASG1 is associated to the network interface of VM1.
Azure Private DNS Zones
The Azure subscription contains the Azure private DNS zones shown in the following table.
□
Zone1.contoso.com has the virtual network links shown in the following table.
□
Other Azure Resources
The Azure subscription contains additional resources as shown in the following table.
□
Requirements:
Virtual Network Requirements
Contoso has the following virtual networks requirements:
* Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:
Two container groups that connect to Vnet6
Three virtual machines that connect to Vnet6
Allow VPN connections to be established to Vnet6
Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network
* The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.
* A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from

Subnet2 to the internet.
Network Security Requirements
Contoso has the following network security requirements:
* Configure Azure Active Directory (Azure AD) authentication for Point-to-Site (P2S) VPN users.
* Enable NSG flow logs for NSG3 and NSG4.
* Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.
□
* Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown in the following table.
□

NEW QUESTION # 127

......

If you are new to our AZ-700 exam questions, you may doubt about them a lot. And that is normal. Many of our loyal customers first visited our website, or even they have bought and studied with our AZ-700 practice engine, they would worried a lot. But when they finally passed the exam with our AZ-700 simulating exam, they knew that it is valid and helpful. And we also have free demos on our website, then you will know the quality of our AZ-700 training quiz.
