New 156-315.81 Dumps Free - New 156-315.81 Braindumps Pdf

The three formats of CheckPoint 156-315.81 practice material that we have discussed above are created after receiving feedback from thousands of professionals around the world. You can instantly download the CheckPoint 156-315.81 Real Questions of the

TestValid right after the payment. We also offer our clients free demo version to evaluate the of our Check Point Certified Security Expert R81 (156-315.81) valid exam dumps before purchasing.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q170-Q175):

NEW QUESTION # 170
Fill in the blanks: Gaia can be configured using the _____ or _____ .

- A. WebUI; Gaia Interface
- B. GaiaUI; command line interface
- C. Command line interface; WebUI
- D. Gaia Interface; GaiaUI

Answer: C

NEW QUESTION # 171
What can we infer about the recent changes made to the Rule Base?

- A. 8 changes have been made by administrators since the last policy installation
- B. Rule 1 and object webserver are locked by another administrator
- C. Rule 7 was created by the 'admin' administrator in the current session
- D. The rules 1, 5 and 6 cannot be edited by the 'admin' administrator

Answer: B

NEW QUESTION # 172
Customer's R81 management server needs to be upgraded to R81.20. What is the best upgrade method when the management server is not connected to the Internet?

- A. SmartUpdate upgrade
- B. CPUSE online upgrade
- C. CPUSE offline upgrade
- D. Export R81 configuration, clean install R81.20 and import the configuration

Answer: B

Explanation:
CPUSE offline upgrade is the best upgrade method when the management server is not connected to the Internet. CPUSE (Check Point Upgrade Service Engine) is a tool that automates the process of upgrading and installing software packages on Check Point devices. CPUSE can work in online mode or offline mode. Online mode requires an Internet connection to download the packages from Check Point servers. Offline mode allows you to download the packages manually from another device and transfer them to the management server using a USB drive or SCP. Reference: Check Point Security Expert R81 Course, CPUSE Administration Guide

NEW QUESTION # 173
You have a Gateway is running with 2 cores. You plan to add a second gateway to build a cluster and used a device with 4 cores. How many cores can be used in a Cluster for Firewall-kernel on the new device?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The number of cores that can be used in a Cluster for Firewall-kernel on the new device with 4 cores is 4. Cluster is a feature that allows two or more Security Gateways to provide high availability and load balancing for network traffic. Firewall-kernel is a component of the Security Gateway that performs packet inspection according to security policies. The number of cores that can be used for Firewall-kernel in a Cluster depends on the number of cores available on each device in the Cluster. The Cluster will use the lowest common denominator of cores among all devices in the Cluster for Firewall-kernel. Therefore, if one device has 2 cores and another device has 4 cores, the Cluster will use 2 cores for Firewall-kernel on each device. However, if both devices have 4 cores, the Cluster will use 4 cores for Firewall-kernel on each device.

NEW QUESTION # 174

What is correct statement about Security Gateway and Security Management Server failover in Check Point R81.X in terms of Check Point Redundancy driven solution?

- A. Security Gateway failover as well as Security Management Server failover is a manual procedure.
- B. Security Gateway failover as well as Security Management Server failover is an automatic procedure.
- C. Security Gateway failover is a manual procedure but Security Management Server failover is an automatic procedure.
- D. Security Gateway failover is an automatic procedure but Security Management Server failover is a manual procedure.

Answer: D

Explanation:
The correct statement about Security Gateway and Security Management Server failover in Check Point R81.
X in terms of Check Point Redundancy driven solution is: Security Gateway failover is an automatic procedure but Security Management Server failover is a manual procedure. Security Gateway failover is a feature that allows a cluster of Security Gateways to provide high availability and load balancing for network traffic. If one Security Gateway fails or becomes unreachable, another Security Gateway in the cluster automatically takes over its role and handles the traffic without interrupting the service. Security Management Server failover is a feature that allows a backup Security Management Server to take over the role of the primary Security Management Server in case of failure or disaster. However, this feature requires manual intervention to activate the backup server and restore the database from a backup file.

NEW QUESTION # 175

......

If applicants fail to find reliable material, they fail the 156-315.81 examination. Failure leads to loss of money and time. You just need to rely on TestValid to avoid these losses.
