Useful 156-836 – 100% Free Free Download | New 156-836 Learning Materials

The CheckPoint 156-836 pdf questions learning material provided to the customers from PremiumVCEDump is in three different formats. The first format is PDF format which is printable and portable. It means it can be accessed from tablets, laptops, and smartphones to prepare for the Check Point Certified Maestro Expert - R81 (CCME) (156-836) exam. The CheckPoint 156-836 PDF format can be used offline, and candidates can even prepare for it in the classroom or library by printing questions or on their smart devices.

Achieving the CCME certification can be a valuable asset for IT professionals looking to advance their career in network security and cloud computing. Check Point Certified Maestro Expert - R81 (CCME) certification demonstrates a high level of expertise in Check Point's Maestro solution, which is becoming increasingly popular in large-scale enterprise environments. Certified CCME professionals can expect to be highly sought after by employers looking for experts in network security, virtualization technologies, and cloud computing solutions.

The Check Point Maestro solution is a network security orchestration and management platform that allows organizations to manage large-scale, distributed networks from a central location. The CCME exam tests the candidate's knowledge and practical experience in configuring and managing Check Point Maestro clusters, deploying and maintaining security policies, troubleshooting complex network issues, and optimizing network performance. Passing the CCME exam demonstrates the candidate's ability to design, implement, and manage enterprise-level network security solutions using Check Point Maestro technology.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q73-Q78):

NEW QUESTION # 73

Which distribution mode assigns packets to an SGM based solely on the packet destination IP?

- A. User mode
- B. Manual mode
- **C. Network mode**
- D. Auto-topology mode

Answer: C

Explanation:

Explanation

Network mode is the distribution mode that assigns packets to an SGM based solely on the packet destination IP. In this mode, the Orchestrator uses a hash function to map each destination IP to a specific SGM. This mode ensures that all packets with the same destination IP are processed by the same SGM, regardless of the source IP or port. This mode is suitable for scenarios where the destination IP is the main factor for load balancing, such as NAT or VPN.

NEW QUESTION # 74

What Maestro component is automatically designated the SMO Master?

- A. The first MHO configured is considered the SMO Master.
- B. The MDS that pushes policy to the SMO is considered the SMO Master.
- C. The SGM with the highest member ID (the last one added to the security group.)
- **D. The SGM with the lowest member ID (the first one added to the security group.)**

Answer: D

Explanation:

The SMO Master is the SGM that is responsible for synchronizing the configuration and policy with the other SGMs in the security group. The SMO Master is automatically designated as the SGM with the lowest member ID, which is usually the first one added to the security group. The SMO Master can be changed manually if needed.

NEW QUESTION # 75

What is an uplink interface used for?

- **A. To connect Orchestrators to customer's infrastructure**
- B. To connect in between Orchestrators
- C. To connect in between appliances
- D. To connect appliances to customer's infrastructure

Answer: A

Explanation:

An uplink interface in a Check Point Maestro environment is specifically used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. These interfaces facilitate the transmission and reception of management and control traffic between the MHOs and the customer's network. They are critical for integrating the Maestro system with the external network environment.

Exact Extract:

"Uplink interfaces are used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. They are also used to send and receive management and control traffic from the customer's network to the MHOs."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 1: Introduction to Check Point Maestro, Lesson 1.3: Maestro Interfaces, page 1-10

-Check Point R81 Maestro Administration Guide, Chapter 1: Introduction to Check Point Maestro, Section:

Interfaces, page 1-8

Explanation of Options:

- * A. To connect in between appliances: Incorrect, as uplink interfaces are not used to connect appliances (Security Group Members) to each other. This is typically handled by downlink interfaces or internal backplane connections.
- * B. To connect appliances to customer's infrastructure: Incorrect, as appliances (SGMs) connect to the Orchestrators via downlink interfaces, not directly to the customer's infrastructure.
- * C. To connect Orchestrators to customer's infrastructure: Correct, as uplink interfaces are explicitly designed for this purpose, as stated in the courseware and administration guide.
- * D. To connect in between Orchestrators: Incorrect, as connections between Orchestrators (e.g., in a Dual-Site setup) are typically handled via site-sync ports, not uplink interfaces.

Interfaces, page 1-8

NEW QUESTION # 76

What is the throughput penalty of Security Group?

- A. Depends on the type of Appliance
- B. 10% per Security Group with no relation to the number of members
- **C. 1% per member**
- D. 5% per member

Answer: C

Explanation:

Check Point reduced throughput degradation to 1% per added SGMs. For example, the overall throughput degradation is 10% for 10 SGMs in a Security Group. Check Point aims to reduce this even further in the future.

NEW QUESTION # 77

What command will be used for updating fwkern.conf file on all Appliances within Security Group?

- **A. g_update_conf_file**
- B. vi
- C. g_all_update_conf_file
- D. g_update_kernel

Answer: A

NEW QUESTION # 78
