only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.

## MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q90-Q95):

### NEW QUESTION # 90

In a logistics operation, receiving includes

- A. filling customer orders
- B. disbursing materials to storage
- C. verifying and documenting damage to materials
- D. shipping materials to customers

**Answer: C**

Explanation:

"Receive products" in the CLT framework encompasses checking shipments against documentation, inspecting condition, and documenting any damages or discrepancies before acceptance and putaway. While materials may subsequently move to storage, the essential receiving responsibility is to identify and record damage immediately to support claims, prevent defective stock from entering inventory, and protect downstream fulfillment. Filling customer orders and shipping are separate CLT activity areas ("Process product orders" and "Prepare packages for shipment and ship products"). Accurate damage documentation at receiving is a key control point that feeds inventory accuracy and quality, enabling reliable order processing.

### NEW QUESTION # 91

Which of the following are characteristics of the Just-In-Time (JIT) Principle?

- A. larger lot sizes and decreased frequency of orders
- B. larger lot sizes and greater frequency of orders
- C. smaller lot sizes and decreased frequency of orders
- D. smaller lot sizes and greater frequency of orders

**Answer: D**

Explanation:

The Just-In-Time (JIT) principle, as defined in the CLT curriculum, promotes smaller lot sizes and greater order frequency to ensure that materials arrive or are produced only as needed. This system reduces holding costs, enhances flexibility, and supports continuous flow in lean operations. Smaller batches minimize excess inventory and reduce the risk of obsolescence or waste. However, the increased frequency of replenishment requires efficient scheduling, supplier reliability, and rapid transportation coordination. CLT highlights that implementing JIT demands robust communication channels, accurate demand forecasting, and close supplier partnerships. Warehouses adopting JIT focus on minimizing idle inventory and maximizing responsiveness to customer demand, aligning with modern lean logistics principles.

### NEW QUESTION # 92

Which of the following consists of component inventory used to feed into production or manufacturing lines?

- A. Work-in-Progress (WIP)
- B. Finished goods
- C. Just-In-Time (JIT)
- D. Raw material stock

**Answer: D**

Explanation:

Raw material stock refers to the unprocessed inputs stored for use in manufacturing. The CLT "Inventory Control" standards distinguish among three major categories: raw materials, work-in-progress (WIP), and finished goods. Raw materials are held in inventory to feed production lines, ensuring continuity of manufacturing operations. Effective management prevents production delays while avoiding overstock. CLT emphasizes that raw material inventories must be closely coordinated with procurement and production schedules—often managed through systems like MRP or JIT. Proper labeling, storage, and traceability of raw materials

are vital for quality control and compliance with industry regulations. Unlike WIP (partially completed items), raw materials are inputs awaiting transformation into finished goods.

### NEW QUESTION # 93

What action is required when an overage is identified?

- A. notify the driver
- B. ignore because it is a bonus
- C. segregate and document
- D. note overage on Bill of Material

**Answer: C**

Explanation:

In CLT receiving, discrepancies (overages, shortages, damages) are treated through a controlled exception process. Best practice is to segregate any unexpected quantity from standard flow, document the variance against the purchase order/advance notice, and trigger the facility's discrepancy resolution workflow. This prevents accidental putaway, protects inventory accuracy, and provides traceability for supplier/carrier claims. MSSC's CLT "Receive products" key activities emphasize verifying shipments against documents (PO/ASN), identifying and documenting exceptions, and following facility procedures to quarantine or otherwise segregate nonconforming product until disposition. Doing so supports inventory control accuracy and downstream order fulfillment quality. Failing to segregate can contaminate on-hand balances and create picking/shipping errors later. Over-communicating to a driver without documentation does not resolve the record variance, and treating overages as "bonus" violates inventory integrity and contract terms.

### NEW QUESTION # 94

Which agency is responsible for import/export regulation enforcement?

- A. Customs Trade Partnership Against Terrorism (CTPAT)
- B. U.S. Customs and Border Protection (USCBP)
- C. S. Customs and Border Protection (CBP) enforces all import and export regulations within U.S. ports of entry. CLT 4.0 emphasizes that CBP ensures compliance with customs laws, tariff assessments, trade embargoes, and security programs. While USDOT oversees transport safety and CTPAT is a voluntary security initiative under CBP, the CBP itself holds enforcement authority. It inspects cargo, verifies documentation, collects duties, and ensures compliance with U.S. trade laws and international agreements. For logistics technicians, understanding CBP procedures—including entry filings, tariff classifications, and inspection processes—is critical to maintaining the legal movement of goods across borders. CBP's oversight protects domestic markets and supports national security by preventing smuggling, counterfeit goods, and noncompliant imports.
- D. Globally Harmonized System (GHS)
- E. U.S. Department of Transportation (USDOT)

**Answer: B**
