6.Which two NetApp products offer hardware encryption? (Choose two.)
A. NetApp Storage Encryption (NSE)
B. NVMe self-encrypting drives (SED)
C. NetApp Aggregate Encryption (NAE)
D. NetApp Volume Encryption (NVE)
Answer: A
Explanation:
NetApp Storage Encryption (NSE) and NVMe self-encrypting drives (SED) are two NetApp products that offer hardware encryption. Hardware encryption is a method of encrypting data at the disk level using a hardware-accelerated mechanism. NSE requires all drives in an HA pair to be purpose-built, self-encrypting drives. These drives perform the data encryption themselves through a hardware-accelerated mechanism. Because of the hardware acceleration, NSE systems usually outperform NVE systems when encrypting data1. NVMe self-encrypting drives (SED) are a type of NSE drives that use the NVMe protocol to provide high performance and low latency. NVMe SEDs are supported on select NetApp AFF systems2.

7.Which NetApp BlueXP product enables a customer to provide read and write access to remote Windows servers from a centralized datastore?
A. BlueXP copy and sync
B. BlueXP edge caching
C. BlueXP tiering
D. Cloud Volumes ONTAP
Answer: B
Explanation:
BlueXP edge caching is a NetApp BlueXP product that enables a customer to provide read and write access to remote Windows servers from a centralized datastore. BlueXP edge caching allows you to cache data from a BlueXP volume or a Cloud Volume ONTAP system on a local Windows server, which improves the performance and availability of your applications. You can also sync the cached data back to the source volume, ensuring data consistency and protection.
