Once you have used our Professional-Cloud-Architect exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use Professional-Cloud-Architect exam training at your own right. Our Professional-Cloud-Architect Exam Training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use Professional-Cloud-Architect test guide, you can enter the learning state.

Google Professional-Cloud-Architect certification is a valuable certification for professionals who are responsible for designing, developing, and managing solutions using Google Cloud technologies. Google Certified Professional - Cloud Architect (GCP) certification validates the skills of an individual in designing solutions that are highly available, scalable, and secure. Google Certified Professional - Cloud Architect (GCP) certification is highly valued in the industry and is recognized by many organizations as a standard for cloud architects.

Passing the Google Professional-Cloud-Architect Exam is a significant achievement for IT professionals who want to demonstrate their expertise in cloud architecture and Google Cloud technologies. It opens up a wide range of career opportunities in cloud computing, including roles such as cloud architect, cloud engineer, cloud consultant, and cloud solutions architect. Google Certified Professional - Cloud Architect (GCP) certification is recognized globally as a mark of excellence in cloud architecture and is highly regarded by employers in the IT industry.

Free PDF High Hit-Rate Google - Professional-Cloud-Architect - Google Certified Professional - Cloud Architect (GCP) New Dumps Pdf

It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of Google Professional-Cloud-Architect exam dumps, and their relevant and updated answers. It is convenient for our consumers to check Google Professional-Cloud-Architect Exam Questions free of charge before purchasing the Google Professional-Cloud-Architect practice exam.

Google Professional-Cloud-Architect Certification is highly regarded in the IT industry and is recognized as a benchmark for cloud architects. It is a valuable asset for professionals who want to advance their career in cloud architecture and demonstrate their expertise to potential employers. Google Certified Professional - Cloud Architect (GCP) certification demonstrates a candidate's ability to design and manage solutions on GCP, as well as their understanding of cloud architecture best practices.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q247-Q252):

NEW QUESTION # 247

You are creating a migration plan to move your organization's infrastructure from on-premises to Google Cloud. You want to understand and manage costs effectively after the migration is complete. Which strategies should you include in the migration plan? (Choose two.)

- A. Adopt infrastructure as code (IaC) for the cloud resources.
- B. Enable Backup and DR Service.
- C. Create a Cloud Scheduler job to export billing data to Cloud SQL.
- **D. Configure labels and tags for the resources provisioned in Google Cloud.**
- **E. Create service alerts using Cloud Monitoring.**

Answer: D,E

Explanation:

Configuring labels and tags enables detailed cost allocation and tracking across projects, departments, or applications, helping manage and optimize spending.

Creating service alerts in Cloud Monitoring allows proactive cost and performance management by detecting unusual usage patterns or budget threshold breaches, supporting ongoing cost control after migration.

NEW QUESTION # 248

The operations manager asks you for a list of recommended practices that she should consider when migrating a J2EE application to the cloud. Which three practices should you recommend?

Choose 3 answers

- **A. Deploy a continuous integration tool with automated testing in a staging environment.**
- **B. Port the application code to run on Google App Engine.**
- C. Instrument the application with a monitoring tool like Stackdriver Debugger.
- **D. Select an automation framework to reliably provision the cloud infrastructure.**
- E. Integrate Cloud Dataflow into the application to capture real-time metrics.
- F. Migrate from MySQL to a managed NoSQL database like Google Cloud Datastore or Bigtable.

Answer: A,B,D

Explanation:

<https://cloud.google.com/appengine/docs/standard/java/building-app/cloud-sql>

NEW QUESTION # 249

You are working in a highly secured environment where public Internet access from the Compute Engine VMs is not allowed. You do not yet have a VPN connection to access an on-premises file server. You need to install specific software on a Compute Engine instance. How should you install the software?

- A. Upload the required installation files to Cloud Source Repositories. Configure the VM on a subnet with a Private Google Access subnet. Assign only an internal IP address to the VM. Download the installation files to the VM using gcloud.
- B. Upload the required installation files to Cloud Storage and use firewall rules to block all traffic except the IP address range for Cloud Storage. Download the files to the VM using gsutil.
- **C. Upload the required installation files to Cloud Storage. Configure the VM on a subnet with a Private Google Access subnet. Assign only an internal IP address to the VM. Download the installation files to the VM using gsutil.**
- D. Upload the required installation files to Cloud Source Repositories and use firewall rules to block all traffic except the IP address range for Cloud Source Repositories. Download the files to the VM using gsutil.

Answer: C

NEW QUESTION # 250

Your team will start developing a new application using microservices architecture on Kubernetes Engine. As part of the development lifecycle, any code change that has been pushed to the remote develop branch on your GitHub repository should be built and tested automatically. When the build and test are successful, the relevant microservice will be deployed automatically in the development environment. You want to ensure that all code deployed in the development environment follows this process. What should you do?

- A. Install a post-commit hook on the remote git repository that tests the code and builds the container when code is pushed to the development branch. After a successful commit, have the developer deploy the newly built container image on the development cluster.
- **B. Create a Cloud Build trigger based on the development branch that tests the code, builds the container, and stores it in Container Registry. Create a deployment pipeline that watches for new images and deploys the new image on the development cluster. Ensure only the deployment tool has access to deploy new versions.**
- C. Create a Cloud Build trigger based on the development branch to build a new container image and store it in Container Registry. Rely on Vulnerability Scanning to ensure the code tests succeed. As the final step of the Cloud Build process, deploy the new container image on the development cluster. Ensure only Cloud Build has access to deploy new versions.
- D. Have each developer install a pre-commit hook on their workstation that tests the code and builds the container when committing on the development branch. After a successful commit, have the developer deploy the newly built container image on the development cluster.

Answer: B

Explanation:

<https://cloud.google.com/container-registry/docs/overview>

Create a Cloud Build trigger based on the development branch that tests the code, builds the container, and stores it in Container Registry. Create a deployment pipeline that watches for new images and deploys the new image on the development cluster. Ensure only the deployment tool has access to deploy new versions.

NEW QUESTION # 251

For this question, refer to the Dress4Win case study. To be legally compliant during an audit, Dress4Win must be able to give insights in all administrative actions that modify the configuration or metadata of resources on Google Cloud.

What should you do?

- **A. Enable Cloud Identity-Aware Proxy in all projects, and add the group of Administrators as a member.**
- B. Use Stackdriver Trace to create a trace list analysis.
- C. Use the Activity page in the GCP Console and Stackdriver Logging to provide the required insight.
- D. Use Stackdriver Monitoring to create a dashboard on the project's activity.

Answer: A

NEW QUESTION # 252
