SAP C-ABAPD-2507 Online Test - C-ABAPD-2507 Free Dump Download

You may want to know our different versions of C-ABAPD-2507 exam questions. Firstly, PDF version is easy to read and print. Secondly software version simulates the real C-ABAPD-2507 actual test guide, but it can only run on Windows operating system. Thirdly, online version supports for any electronic equipment and also supports offline use. For the first time, you need to open C-ABAPD-2507 Exam Questions in online environment, and then you can use it offline. All in all, helping our candidates to pass the exam successfully is what we always looking for. Our C-ABAPD-2507 actual test guide is your best choice.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q78-Q83):

NEW QUESTION # 78

For the assignment, `gv_target = gv_source`.

which of the following data declarations will always work without truncation or rounding? Note: There are 2 correct answers to this question.

- A. DATA gv_source TYPE c. to DATA gv_target TYPE string.
- B. DATA gv_source TYPE string, to DATA gv_target TYPE c.
- C. DATA gv_source TYPE d. to DATA gv_target TYPE string.
- D. DATA gv_source TYPE p LENGTH 8 DECIMALS 3. to DATA gv_target TYPE p LENGTH 16 DECIMALS 2.

Answer: A,C

Explanation:

The data declarations that will always work without truncation or rounding for the assignment `gv_target = gv_source` are B and C. This is because the target data type string is a variable-length character type that can hold any character string, including those of data types c (fixed-length character) and d (date). The assignment of a character or date value to a string variable will not cause any loss of information or precision, as the string variable will adjust its length to match the source value¹².

You cannot do any of the following:

A. DATA gv_source TYPE string, to DATA gv_target TYPE c.: This data declaration may cause truncation for the assignment `gv_target = gv_source`. This is because the target data type c is a fixed-length character type that has a predefined length. If the source value of type string is longer than the target length of type c, the source value will be truncated on the right to fit the target length¹².

D. DATA gv_source TYPE p LENGTH 8 DECIMALS 3. to DATA gv_target TYPE p LENGTH 16 DECIMALS 2.: This data declaration may cause rounding for the assignment `gv_target = gv_source`. This is because the target data type p is a packed decimal type that has a predefined length and number of decimal places. If the source value of type p has more decimal places than the target type p, the source value will be rounded to the target number of decimal places¹².

NEW QUESTION # 79

You have attached a system field to an input parameter of a CDS view entity as follows:

```
define view entity Z_ENTITY
with parameters
@Environment.systemField: #SYSTEM_LANGUAGE
language : spras
```

What are the effects of this annotation? (Select 2 correct answers)

- A. The value of sy-langu will be passed to the CDS view automatically when you use the CDS view in ABAP but not when you use it in another view entity.
- B. It is no longer possible to pass your own value to the parameter.
- C. You can still override the default value with a value of your own.
- D. The value of sy-langu will be passed to the CDS view automatically both when you use the CDS view in ABAP and in another CDS view entity (view on view).

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* With `@Environment.systemField: #SYSTEM_LANGUAGE`, the system field sy-langu is automatically supplied as a default value for the parameter.

* This works both in ABAP and in view-on-view scenarios (A).

* Developers can still override this value when calling the view explicitly (B).

* Options C and D are incorrect: system fields are not limited to ABAP only, and overriding is allowed.

Study Guide Reference: ABAP CDS Guide - System Fields in View Parameters.

NEW QUESTION # 80

To give authorization to users, in which order are the artifacts being used?

- A. The IAM app uses the Authorization Object.
- B. The IAM app uses the Business Catalog.
- C. The IAM app uses the Business User.
- D. The IAM app uses the Business Role.

Answer: C

NEW QUESTION # 81

Which function call produces the string 'LORE IPSUM FACTUM'?

- A. `to_upper(condense('Lore IpsumFactum'))`
- B. `from_mixed(val = 'LoreIpsumFactum' sep =`
- C. `to_mixed(val = 'Lore IpsumFactum' sep =`

- D. condense to_upper('LoremIpsumFactum'))

Answer: A

NEW QUESTION # 82

Which of the following custom code use cases falls under Tier 1 extensibility guidelines?

- A. Implement a user or customer exit, for example SAPMV45A.
- **B. Create a custom field on a DB table or CDS view via a released extension include.**
- C. Create a wrapper class around SAP objects that have not been released yet.
- D. Apply an SAP note with manual corrections, for example a DDIC object from SAP Basis.

Answer: B

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

Tier 1 extensibility in ABAP Cloud corresponds to the safe and upgrade-stable extension layer.

* Adding custom fields to released DB tables or CDS views via released extension includes is fully supported.

* Using classic user exits (A), manual note corrections (C), or wrappers for unreleased APIs (D) belong to Tier 2 or Tier 3, and are not part of Tier 1 safe extensibility.

This guarantees that custom code in Tier 1 is cloud-ready, upgrade-stable, and based only on released extension points and APIs.

Verified Study Guide Reference: ABAP Cloud Extensibility Model - Three-Tier Extensibility Rules.

NEW QUESTION # 83

.....

If you have decided to participate in the SAP C-ABAPD-2507 exam, Exam4PDF is here. We can help you achieve your goals. We know that you need to pass your SAP C-ABAPD-2507 Exam, we promise that provide high quality exam materials for you, Which can help you through SAP C-ABAPD-2507 exam.
