Purchasing a product may be a cautious thing for all of us, because we not only need to consider the performance of the product but also need to think about the things after purchasing. Our product will provide free demo for trying, and after you have bought the product of the CISM exam, we will send you the product by email in ten minutes after we have received the payment. After you bought the practice materials for the CISM Exam, if you have any question in the process of using, you can ask the service staff for help by email. Free update for having bought product is also available.

There are many types of study materials offered by ISACA, which are available in English, Japanese, Spanish, and Chinese. You can find training videos and eBooks. Thus, you can go for the following guides that are available on Amazon to learn the exam topics:

- CISM Review Manual.
- CISM Certified Information Security Manager All-in-One Exam Guide 1st Edition by Peter H. Gregory;

The vendor also offers virtual instructor-led training, on-site courses, online review courses, and a lot of other resources. Attending an online course a week or two before the exam can also be beneficial. It is intended solely to prepare you for the test and the instructors may sometimes point to the topics you should pay attention to. After its completion, you will have the CISM Self-Assessment exam with 75 questions that will show you how much you are prepared for the actual test. If you have done this assessment well, then you do not have to be worried about the real exam. The online course covers all the objectives and offers you plenty of interactive workbooks, case study activities, and interactive modules.

The Certified Information Security Manager (CISM) certification is a globally recognized credential by ISACA that emphasizes the role of information security managers in organizations. The CISM Certification is designed for professionals who manage, design, and assess an enterprise's information security. The CISM certification exam is a comprehensive exam that tests the candidate's knowledge and understanding of information security management principles and practices.

ISACA CISM (Certified Information Security Manager) Certification Exam is one of the most prestigious and globally recognized certifications in the field of information security management. It is designed for professionals who are responsible for managing, designing, and overseeing information security systems in organizations. The CISM Certification is a demonstration of a candidate's knowledge and expertise in information security management and is highly valued by employers worldwide.

ISACA Certified Information Security Manager Sample Questions (Q762-Q767):

NEW QUESTION # 762

Which of the following is the PRIMARY purpose for establishing a bring your own device (BYOD) policy that only permits application downloads from designated online markets.

- A. Allow IT to monitor application usage.
- B. Enhance IT application support for users.
- **C. Protect against malware-based attacks.**
- D. Conserve storage for approved applications.

Answer: C

NEW QUESTION # 763

Which of the following technologies is utilized to ensure that an individual connecting to a corporate internal network over the Internet is not an intruder masquerading as an authorized user?

- A. Embedded digital signature
- **B. Two-factor authentication**
- C. IP address packet filtering
- D. Intrusion detection system (IDS)

Answer: B

Explanation:

Explanation

Two-factor authentication provides an additional security mechanism over and above that provided by passwords alone. This is frequently used by mobile users needing to establish connectivity to a corporate network. IP address packet filtering would protect against spoofing an internal address but would not provide strong authentication. An intrusion detection system (IDS) can be used to detect an external attack but would not help in authenticating a user attempting to connect. Digital signatures ensure that transmitted information can be attributed to the named sender.

NEW QUESTION # 764

When collecting evidence for forensic analysis, it is important to:

- A. ensure law enforcement personnel are present before the forensic analysis commences.
- **B. ensure the assignment of qualified personnel.**
- C. request the IT department do an image copy.
- D. disconnect from the network and isolate the affected devices.

Answer: B

Explanation:

Without the initial assignment of forensic expertise, the required levels of evidence may not be preserved. In choice B, the IT department is unlikely to have that level of expertise and should, thus, be prevented from taking action. Choice C may be a

subsequent necessity that comes after choice A. Choice D, notifying law enforcement, will likely occur after the forensic analysis has been completed.

NEW QUESTION # 765

What is the BEST way to ensure that an intruder who successfully penetrates a network will be detected before significant damage is inflicted?

- A. Establish minimum security baselines
- **B. Install a honeypot on the network**
- C. Perform periodic penetration testing
- D. Implement vendor default settings

Answer: B

Explanation:

Explanation

Honeypots attract hackers away from sensitive systems and files. Since honeypots are closely monitored, the intrusion is more likely to be detected before significant damage is inflicted. Security baselines will only provide assurance that each platform meets minimum criteria. Penetration testing is not as effective and can only be performed sporadically. Vendor default settings are not effective.

NEW QUESTION # 766

Which of the following is MOST important to have in place to help secure ongoing funding for the information security program?

- A. Threat assessment report
- B. Information security risk register
- C. Information security strategy
- **D. Security balanced scorecard**

Answer: D
