

Certification Pure Storage FlashArray-Implementation-Specialist Training, New FlashArray-Implementation-Specialist Exam Answers

What's more, part of that PracticeTorrent FlashArray-Implementation-Specialist dumps now are free:
<https://drive.google.com/open?id=1dAfVCB65gE39zC508CuLNePUuoqj4fGC>

We will be happy to assist you with any questions regarding our products. Our Pure Storage FlashArray-Implementation-Specialist practice exam software helps to prepare applicants to practice time management, problem-solving, and all other tasks on the standardized exam and lets them check their scores. The Pure Storage FlashArray-Implementation-Specialist Practice Test results help students to evaluate their performance and determine their readiness without difficulty.

Pure Storage FlashArray-Implementation-Specialist Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Pre-InstallationUpgrade: This section of the exam measures the skills of Enterprise Infrastructure Technicians and covers all preparation activities before deploying or upgrading a Pure Storage FlashArray. It includes understanding environmental requirements, verifying prerequisites, checking compatibility, and validating system readiness through appropriate tools and documentation.
Topic 2	<ul style="list-style-type: none">Post-InstallationUpgrade: This section of the exam measures the skills of FlashArray Implementation Specialists and evaluates how professionals confirm system functionality after installation or an upgrade. It involves validating connectivity, running health checks, confirming configurations, and ensuring that the deployment meets operational expectations.
Topic 3	<ul style="list-style-type: none">Installation: This section of the exam measures the skills of Enterprise Infrastructure Technicians and focuses on executing a successful installation of FlashArray systems. It tests the ability to perform physical setup, cabling, configuration of network settings, and the application of initial system configurations necessary for full deployment.
Topic 4	<ul style="list-style-type: none">Upgrades: This section of the exam measures the skills of FlashArray Implementation Specialists and focuses on tasks involved in managing firmware and software upgrades. Candidates must demonstrate knowledge of upgrade planning, verification steps, and rollback procedures, ensuring that systems are updated with minimal disruption to service.

New Pure Storage FlashArray-Implementation-Specialist Exam Answers - New FlashArray-Implementation-Specialist Study Notes

Passing the exam just one time is a good wish of every candidate. If you choose us, we can help you pass your exam in your first attempt. FlashArray-Implementation-Specialist exam braindumps are high quality, and you can improve your efficiency during the preparation. Furthermore, FlashArray-Implementation-Specialist exam dumps are cover most of the knowledge points for the exam, you can have a good command of the knowledge points during practicing. We have online and offline service for FlashArray-Implementation-Specialist Exam Materials, if you any questions bother you, you can just have a conversion with us or you can clarify the problem through email, and we will give you reply as quickly as we can.

Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q119-Q124):

NEW QUESTION # 119

A data pack has been installed and the puredrive list command shows the drives in "unadmitted" status. Which command should be used to complete the admission?

- A. purearray drive admit
- **B. puredrive admit**
- C. puredrive add

Answer: B

Explanation:

The puredrive admit command is used to complete the admission process for drives showing as "unadmitted," integrating them fully into the FlashArray.

NEW QUESTION # 120

When transforming an array from SAS to NVMe with the Evergreen XFORM upgrade, when should a swing shelf be installed?

- **A. When there is insufficient free space to evict capacity.**
- B. When the chassis is populated with two data packs
- C. When the array is half populated with Flash Modules

Answer: A

Explanation:

A swing shelf is installed during the SAS to NVMe Evergreen XFORM upgrade only if the array lacks enough free capacity to evacuate data packs, enabling safe data migration during transformation.

NEW QUESTION # 121

After completing an HWNDU, what command should an Implementation Engineer run to confirm if any open alerts are transitioning to a 'closing' status?

- A. pureaudit list
- **B. purealert list**
- C. puremaintenance list --open

Answer: B

Explanation:

During and after a Hardware Non-Disruptive Upgrade (HWN DU), the FlashArray may generate various alerts related to component removals, path failovers, or temporary redundancy reductions. Once the upgrade is physically complete and the software has stabilized, the Implementation Engineer must verify that the array has returned to a fully healthy state.

The command purealert list is the primary tool for this verification. It displays the current table of active alerts on the system.

If the array is healthy, this list should be empty or contain only "Info" level messages.

If the system is still recovering, you might see alerts with a status indicating they are "closing" or "downgrading" as the conditions resolve (e.g., "Controller redundancy restored").

pureaudit list shows the history of user commands, not system health alerts. puremaintenance is not a standard command for checking alert status. Therefore, purealert list is the correct command to validate that no critical hardware or software issues remain active after the maintenance window.

NEW QUESTION # 122

An Implementation Engineer needs to run the puresetup replace procedure on the FlashArray//X during a controller upgrade. Which command should the Implementation Engineer run on the new controller to determine its model?

- A. hwconfig --model
- B. hwconfig --all
- C. purearray list --controller

Answer: A

Explanation:

To determine the specific model of a replacement controller while in the puresetup or manufacturing shell (before the controller has joined the cluster), the correct command is hwconfig --model.

During a controller replacement procedure, the engineer often connects to the new controller via serial or a temporary IP. At this stage, the full Purity CLI (and thus purearray list) may not be fully available or relevant because the controller is in a "setup" or "unconfigured" state.

hwconfig: This is a lower-level utility used to read the Field Replaceable Unit (FRU) data directly from the hardware VPD (Vital Product Data).

--model: This flag specifically filters the output to display the model string (e.g., FA-X50R3-CT0). Verifying this string is a critical safety step to ensure the replacement hardware matches the existing cluster node before attempting the software join process (puresetup replace).

NEW QUESTION # 123

For FlashArray//XL, which PCIe card slot is reserved for control upgrades?

- A. 0
- B. 1
- C. 2

Answer: A

Explanation:

FlashArray//XL models are designed with 9 PCIe slots per controller, providing ample connectivity options for various components. Slot 5 is specifically reserved for non-disruptive upgrade (NDU) procedures, ensuring that controller upgrades can be performed without impacting system availability. This slot allocation is part of the system's design to facilitate seamless upgrades and maintain operational continuity.

NEW QUESTION # 124

.....

PracticeTorrent web-based practice exam is compatible with all browsers and operating systems. Whereas the FlashArray-Implementation-Specialist PDF file is concerned this file is the collection of real, valid, and updated Pure Storage FlashArray-Implementation-Specialist exam questions. You can use the Pure Storage FlashArray-Implementation-Specialist Pdf Format on your desktop computer, laptop, tabs, or even on your smartphone and start Pure Storage Certified FlashArray Implementation Specialist (FlashArray-Implementation-Specialist) exam questions preparation anytime and anywhere.
