

Salesforce Mule-Arch-201 Latest Practice Materials | Amazing Pass Rate For Your Salesforce Mule-Arch-201: Salesforce Certified MuleSoft Platform Architect

We continually improve the versions of our Mule-Arch-201 study materials so as to make them suit all learners with different learning levels and conditions. The clients can use the APP/Online test engine of our Mule-Arch-201 study materials in any electronic equipment such as the cellphones, laptops and tablet computers. Our after-sale service is very considerate and the clients can consult our online customer service about the price and functions of our Mule-Arch-201 Study Materials and refund issues on the whole day and year.

Learning and understanding Salesforce Mule-Arch-201 Exam Questions is not enough to pass the Mule-Arch-201 exam. Regular tests and self-evaluation are essential. The online Mule-Arch-201 practice test engine makes it easy for candidates to self-evaluate anytime. The results will boost your confidence and highlight any areas that need more attention. Educationists and experts highly acknowledge this tool created by Pass4suresVCE.

Mule-Arch-201 Certification Dumps & Mule-Arch-201 Reliable Dump

Applicants of the Mule-Arch-201 test who invest the time, effort, and preparation with updated Mule-Arch-201 questions eventually get success. Without the latest Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam dumps, candidates fail the test and waste their time and money. As a result, preparing with actual Mule-Arch-201 Questions is essential to clear the test.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q71-Q76):

NEW QUESTION # 71

A company uses a hybrid Anypoint Platform deployment model that combines the EU control plane with customer-hosted Mule runtimes. After successfully testing a Mule API implementation in the Staging environment, the Mule API implementation is set with environment-specific properties and must be promoted to the Production environment. What is a way that MuleSoft recommends to configure the Mule API implementation and automate its promotion to the Production environment?

- A. Use an API policy to change properties in the Mule API implementation deployed to the Staging environment and another API policy to deploy the Mule API implementation to the Production environment
- B. Modify the Mule API implementation's properties in the API Manager Properties tab, then promote the Mule API implementation to the Production environment using API Manager
- C. Modify the Mule API implementation's properties in Anypoint Exchange, then promote the Mule API implementation to the Production environment using Runtime Manager

- D. Bundle properties files for each environment into the Mule API implementation's deployable archive, then promote the Mule API implementation to the Production environment using Anypoint CLI or the Anypoint Platform REST APIs.

Answer: D

Explanation:

Correct Answer: Bundle properties files for each environment into the Mule API implementation's deployable archive, then promote the Mule API implementation to the Production environment using Anypoint CLI or the Anypoint Platform REST APIs

>> Anypoint Exchange is for asset discovery and documentation. It has got no provision to modify the properties of Mule API implementations at all.

>> API Manager is for managing API instances, their contracts, policies and SLAs. It has also got no provision to modify the properties of API implementations.

>> API policies are to address Non-functional requirements of APIs and has again got no provision to modify the properties of API implementations.

So, the right way and recommended way to do this as part of development practice is to bundle properties files for each environment into the Mule API implementation and just point and refer to respective file per environment.

NEW QUESTION # 72

An organization makes a strategic decision to move towards an IT operating model that emphasizes consumption of reusable IT assets using modern APIs (as defined by MuleSoft).

What best describes each modern API in relation to this new IT operating model?

- A. Each modern API must be REST and HTTP based
- B. Each modern API has its own software development lifecycle, which reduces the need for documentation and automation
- C. Each modern API must be treated like a product and designed for a particular target audience (for instance, mobile app developers)
- D. Each modern API must be easy to consume, so should avoid complex authentication mechanisms such as SAML or JWT

Answer: C

Explanation:

Correct Answers:

1. Each modern API must be treated like a product and designed for a particular target audience (for instance mobile app developers)

The screenshot shows the MuleSoft website page titled 'API Strategy Resources'. The page content includes an introductory paragraph and a bulleted list of characteristics of modern APIs. A large watermark 'pass4sure.com' is overlaid on the page.

Home > Resources > Articles > API Strategy Resources

API Strategy Resources

An [API strategy](#) is a critical component of digital transformation. Over the years, the term "API" (which stands for Application Programming Interface) has been used generically to describe a connectivity interface to an application. However, modern APIs have taken on some characteristics that distinguish them from poorly designed APIs of the past:

- Modern APIs adhere to standards (typically HTTP and REST), that are developer-friendly, easily accessible and understood broadly.
- They are treated more like **products** than code. APIs are designed for consumption for specific audiences (e.g., mobile developers), they are documented, and they are versioned in a way that users can have certain expectations of its maintenance and lifecycle.
- Because they are much more standardized, today's APIs have a much stronger discipline for security and governance, as well as monitored and managed for performance and scale.

NEW QUESTION # 73

An organization is deploying their new implementation of the OrderStatus System API to multiple workers in CloudHub. This API fronts the organization's on-premises Order Management System, which is accessed by the API implementation over an IPsec

tunnel.

What type of error typically does NOT result in a service outage of the OrderStatus System API?

- A. API Manager has an extended outage during the initial deployment of the API implementation
- B. The AWS region goes offline with a major network failure to the relevant AWS data centers
- **C. A CloudHub worker fails with an out-of-memory exception**
- D. The Order Management System is Inaccessible due to a network outage in the organization's on-premises data center

Answer: C

Explanation:

Correct Answer: A CloudHub worker fails with an out-of-memory exception.

>> An AWS Region itself going down will definitely result in an outage as it does not matter how many workers are assigned to the Mule App as all of those in that region will go down. This is a complete downtime and outage.

>> Extended outage of API manager during initial deployment of API implementation will of course cause issues in proper application startup itself as the API Autodiscovery might fail or API policy templates and policies may not be downloaded to embed at the time of application startup etc... there are many reasons that could cause issues.

>> A network outage on-premises would of course cause the Order Management System not accessible and it does not matter how many workers are assigned to the app they all will fail and cause outage for sure.

The only option that does NOT result in a service outage is if a cloudhub worker fails with an out-of-memory exception. Even if a worker fails and goes down, there are still other workers to handle the requests and keep the API UP and Running. So, this is the right answer.

NEW QUESTION # 74

A Mule application implements an API. The Mule application has an HTTP Listener whose connector configuration sets the HTTPS protocol and hard-codes the port value. The Mule application is deployed to an Anypoint VPC and uses the CloudHub 1.0 Shared Load Balancer (SLB) for all incoming traffic.

Which port number must be assigned to the HTTP Listener's connector configuration so that the Mule application properly receives HTTPS API invocations routed through the SLB?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

When using CloudHub 1.0's Shared Load Balancer (SLB) for a Mule application configured with HTTPS in an Anypoint VPC, specific ports must be configured for the application to correctly route incoming traffic:

Port Requirement for SLB:

The CloudHub Shared Load Balancer for HTTPS traffic requires that applications listen on port 8092 for secure (HTTPS) communication. This port is reserved specifically for SSL traffic when using SLB with Anypoint VPCs.

Why Option B is Correct:

Setting the HTTP Listener's connector configuration to 8092 aligns with CloudHub requirements for HTTPS via the Shared Load Balancer.

of Incorrect Options:

Option A (8082) is used for non-HTTPS (HTTP) traffic.

Option C (80) and Option D (443) are standard web ports but are not applicable within CloudHub SLB's internal configuration for VPC routing.

Reference

For more information on the Shared Load Balancer port configurations, refer to MuleSoft's documentation on CloudHub and VPC load balancer requirements.

NEW QUESTION # 75

A Platform Architect inherits a legacy monolithic SOAP-based web service that performs a number of tasks, including showing all policies belonging to a client. The service connects to two back-end systems - a life-insurance administration system and a general-insurance administration system - and then queries for insurance policy information within each system, aggregates the results, and

presents a SOAP-based response to a user interface (UI).
The architect wants to break up the monolithic web service to follow API-led conventions.
Which part of the service should be put into the process layer?

- A. Presenting the SOAP-based response to the UI
- B. Authenticating and maintaining connections to each of the back-end administration systems
- C. Querying the data from the administration systems
- **D. Combining the insurance policy information from the administration systems**

Answer: D

NEW QUESTION # 76

.....

If you want to make your IT dream come true, you just need to choose the professional training materials. Pass4suresVCE is a professional website to provide IT certification training materials. Our Mule-Arch-201 exam training materials is the result of Pass4suresVCE's experienced IT experts with constant exploration, practice and research for many years. After you purchase our Mule-Arch-201 Dumps PDF training materials, we will provide one year free renewal service.

Mule-Arch-201 Certification Dumps: <https://www.pass4suresvce.com/Mule-Arch-201-pass4sure-vce-dumps.html>

Salesforce Mule-Arch-201 Latest Practice Materials Our users are all over the world, and users in many countries all value privacy, The passing rate of our Mule-Arch-201 training braindump is 99% which means that you almost can pass the Mule-Arch-201 test with no doubts, And with scientific design concept, they've designed Mule-Arch-201 training material with all common questions types, conforming to people's understanding and memory, We repeatedly and unquestionably provide the most valid & useful Mule-Arch-201 exam dumps, along with the world-class experience and service.

He has been a keynote speaker or a distinguished lecturer on six Mule-Arch-201 continents, AutoMarking Index Entries, Our users are all over the world, and users in many countries all value privacy.
