認定するNCP-US-6.5受験資格試験-試験の準備方法-最高のNCP-US-6.5試験過去問

従来の試験によってFast2testが今年のNutanixのNCP-US-6.5認定試験を予測してもっとも真実に近い問題集を研究し続けます。Fast2testは100%でNutanixのNCP-US-6.5「Nutanix Certified Professional - Unified Storage (NCP-US) v6.5」認定試験に合格するのを保証いたします。

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 認定 NCP-US-6.5 試験問題 (O45-O50):

質問 # 45

Which tool allows a report on file sizes to be automatically generated on a weekly basis?

- A. Files view in Prism Central
- B. **Data Lens**
- C. Files Console via Prism Element
- D. File Analytics

正解: B

解説:

Data Lens is a feature that provides insights into the data stored in Files, such as file types, sizes, owners, permissions, and access patterns. Data Lens allows administrators to create reports on various aspects of their data and schedule them to run automatically on a weekly basis. References: Nutanix Data Lens Administration Guide

質問 # 46

An administrator is expanding an Objects store cluster. Which action should the administrator take to ensure the environment is configured properly prior to performing the installation?

- A. Upgrade MSP to 2.0 or later.
- B. Configure DNS on only Prism Element.
- C. **Upgrade Prism Element to 5.20 or later.**
- D. Configure NTP on only Prism Central.

正解: C

解説:

Nutanix Objects, part of Nutanix Unified Storage (NUS), is deployed as Object Store Service VMs on a Nutanix cluster. Expanding an Objects store cluster involves adding more resources (e.g., nodes, Object Store Service VMs) to handle increased demand. Prior to expansion, the environment must meet certain prerequisites to ensure a successful installation.

Analysis of Options:

* Option A (Configure NTP on only Prism Central): Incorrect. Network Time Protocol (NTP) synchronization is critical for Nutanix clusters, but it must be configured on both Prism Central and Prism Element (the cluster) to ensure consistent time across all components, including Object Store Service VMs. Configuring NTP on only Prism Central is insufficient and can lead to time synchronization issues during expansion.

* Option B (Upgrade MSP to 2.0 or later): Incorrect. MSP (Microservices Platform) is a Nutanix component used for certain services, but it is not directly related to Nutanix Objects expansion. Objects relies on AOS and Prism versions, not MSP, and there is no specific MSP version requirement mentioned in Objects documentation for expansion.

* Option C (Upgrade Prism Element to 5.20 or later): Correct. Nutanix Objects has specific version requirements for AOS (which runs on Prism Element) to support features and ensure compatibility during expansion. According to Nutanix documentation, AOS 5.20 or later is recommended for Objects deployments and expansions, as it includes stability improvements, bug fixes, and support for newer Objects features. Upgrading Prism Element to 5.20 or later ensures the environment is properly configured for a successful Objects store cluster expansion.

* Option D (Configure DNS on only Prism Element): Incorrect. DNS configuration is important for name resolution in a Nutanix environment, but it must be configured for both Prism Element and Prism Central, as well as for the Object Store Service VMs. Configuring DNS on only Prism Element is insufficient, as Objects expansion requires proper name resolution across all components, including Prism Central for management.

Why Option C?

Expanding a Nutanix Objects store cluster requires the underlying AOS version (managed via Prism Element) to meet minimum requirements for compatibility and stability. AOS 5.20 or later includes necessary updates for Objects, making this upgrade a critical prerequisite to ensure the environment is properly configured for expansion. Other options, like NTP and DNS, are also important but require broader configuration, and MSP is not relevant in this context.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Before expanding a Nutanix Objects store cluster, ensure that the environment meets the minimum requirements. Upgrade Prism Element to AOS 5.20 or later to ensure compatibility, stability, and support for Objects expansion features."

:

Nutanix Objects Administration Guide, Version 4.0, Section: "Prerequisites for Objects Expansion" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Cluster Expansion".

質問 # 47

Users are complaining about having to reconnect to share when there are networking issues. Which files feature should the administrator enable to ensure the sessions will auto-reconnect in such events?

- A. Multi-Protocol Shares
- B. Workload Optimization
- **C. Durable File Handles**
- D. Connected Shares

正解: **C**

解説:

The Files feature that the administrator should enable to ensure the sessions will auto-reconnect in such events is Durable File Handles. Durable File Handles is a feature that allows SMB clients to reconnect to a file server after a temporary network disruption or a client sleep state without losing the handle to the open file. Durable File Handles can improve the user experience and reduce the risk of data loss or corruption. Durable File Handles can be enabled for each share in the Files Console. Reference: Nutanix Files Administration Guide, page 76; Nutanix Files Solution Guide, page 10

質問 # 48

Which user is authorized to deploy File Analytics?

- **A. Prism Central administrator**
- B. Prism Element administrator
- C. AD user mapped to a Cluster admin role
- D. AD user mapped to a Prism admin role

正解: **A**

解説:

The user that is authorized to deploy File Analytics is Prism Central administrator. Prism Central is a web-based user interface that allows administrators to manage multiple Nutanix clusters and services, including Files and File Analytics. Prism Central administrator is a user role that has full access and control over all Prism Central features and functions. To deploy File Analytics, the user must log in to Prism Central as a Prism Central administrator and follow the steps in the File Analytics Deployment wizard. Reference: Nutanix Files Administration Guide, page 93; Nutanix File Analytics Deployment Guide

質問 # 49

An administrator is looking for a tool that includes these features:

- * Permission Denials
- * Top 5 Active Users
- * Top 5 Accessed Files
- * File Distribution by Type

Nutanix tool should the administrator choose?

- A. File Server Manager
- B. Files Console
- C. Prism Central
- **D. File Analytics**

正解: **D**

解説:

The tool that includes these features is File Analytics. File Analytics is a feature that provides insights into the usage and activity of file data stored on Files. File Analytics consists of a File Analytics VM (FAVM) that runs on a Nutanix cluster and communicates with the File Server VMs (FSVMs) that host the file shares. File Analytics can display various reports and dashboards that include these features:

* Permission Denials: This report shows the number of permission denied events for file operations, such as read, write, delete, etc., along with the user, file, share, and server details.

* Top 5 Active Users: This dashboard shows the top five users who performed the most file operations in a given time period, along

with the number and type of operations.

* Top 5 Accessed Files: This dashboard shows the top five files that were accessed the most in a given time period, along with the number of accesses and the file details.

* File Distribution by Type: This dashboard shows the distribution of files by their type or extension, such as PDF, DOCX, JPG, etc., along with the number and size of files for each type. References:
