VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 2	<ul style="list-style-type: none"> • VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 3	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 4	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 5	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q126-Q131):

NEW QUESTION # 126

An organization is integrating VMware vCenter with Active Directory (AD) to streamline user authentication.

As part of this process, the administrator needs to add AD as an identity source in vCenter.

Which three steps must be performed to successfully add AD as an identity source? (Choose three.)

- A. Create an Active Directory object for the vCenter Server Appliance.
- B. Enter the Domain Name and the credentials of an AD user with a minimum of read-only access to Base DN for users and groups.
- C. Select 'Identity Sources' and choose 'Active Directory Domain'.
- D. Navigate to the vCenter Single Sign-On configuration in the vSphere Client.

- E. Reboot the vCenter to apply the identity source settings.
- F. Configure DNS settings on all ESXi hosts to point to the AD DNS servers.

Answer: B,C,D

Explanation:

You must provide the AD domain name plus credentials (read-only is sufficient) to bind and query the Base DN for users and groups.

In the vSphere Client's Identity Sources section, choose "Active Directory Domain" when adding a new source.

These options are found under Administration # Single Sign-On # Configuration # Identity Sources in the vSphere Client.

NEW QUESTION # 127

An administrator is tasked with migrating a set of virtual machines between data centers using HCX.

To minimize downtime and ensure data consistency, which two HCX migration options should be considered? (Choose two.)

- A. HCX Replication Assisted vMotion (RAV)
- B. HCX Bulk Migration
- C. HCX Network Extension
- D. HCX vMotion
- E. HCX Cold Migration

Answer: C

Explanation:

VM storage policies in a VMware vSphere environment are used to define and enforce specific storage requirements for virtual machines, such as performance (e.g., IOPS), availability (e.g., RAID levels), and redundancy. These policies ensure that VMs are placed on storage that meets their particular needs and that storage resources are utilized effectively.

NEW QUESTION # 128

Which two operations can be completed in the SDDC Manager UI on an NSX Edge cluster after it has been deployed into a workload domain? (Choose two.)

- A. Expand
- B. Shrink
- C. Sync
- D. Redeploy
- E. Delete

Answer: A,B

Explanation:

After an NSX Edge cluster is deployed into a workload domain, SDDC Manager provides built-in operations to adjust the cluster size. According to the VMware Cloud Foundation 5.2 documentation:

"After you create an NSX Edge cluster, you can use SDDC Manager to expand or shrink it by adding or deleting NSX Edge nodes."

Breakdown of options:

B). Expand- You can add one or more Edge nodes to increase the cluster size.

E). Shrink- You can remove Edge nodes to decrease the cluster size.

These two actions are the only supported cluster scaling operations available in SDDC Manager post-deployment. Other operations-such as Redeploy, Sync, or Delete-are not available via the UI for a deployed Edge cluster and are either manual or unsupported in that context.

Summary:

Selected choices match the documented capability to scale an NSX Edge cluster via SDDC Manager.

No other operations (A, C, D) are supported for an existing Edge cluster through the UI.

NEW QUESTION # 129

An administrator is responsible for monitoring the logs of multiple vSphere components using VMware Aria Operations for Logs.

They notice an increase in error logs for a specific ESXi host.

Which two steps should be taken to pinpoint the issue? (Choose two.)

- A. Restart the ESXi host to resolve the issue immediately
- **B. Filter the logs by the ESXi host name and error severity.**
- C. Correlate the error logs with recent configuration changes on the ESXi host.
- **D. Check for patterns or repeated error messages over a specific time frame.**
- E. Delete all old logs to free up space and generate new logs.

Answer: B,D

Explanation:

Filtering the logs by the ESXi host name and error severity helps narrow down the logs to those relevant to the specific host and allows for easier identification of significant errors.

Checking for patterns or repeated error messages over a specific time frame helps identify the root cause of the issue and determine if the errors are linked to a specific event or condition.

NEW QUESTION # 130

An alert in SDDC Manager indicates that the health status of the vSAN cluster is degraded.

Which tool within VMware Cloud Foundation should be used to gather detailed logs and perform in-depth troubleshooting for the vSAN issues?

- **A. Aria Operations for Logs**
- B. Aria Operations for Networks
- C. vCenter Server
- D. SDDC Manager

Answer: A

Explanation:

Aria Operations for Logs (formerly known as vRealize Log Insight) is used to collect, analyze, and troubleshoot logs from various components within VMware Cloud Foundation, including the vSAN cluster. It provides detailed insights into the logs, allowing administrators to perform in-depth troubleshooting of issues like degraded health statuses.
