Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q250-Q255):

NEW QUESTION # 250

You need to ensure the customer is able to access the business event.

Which two endpoint types can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Power Automate
- B. Event Grid
- C. Service Bus Queue
- D. Service Bus Topic

Answer: B,D

NEW QUESTION # 251

A company is implementing Dynamics 365 Finance. Vendors receive a risk rating that is determined by their on-time delivery performance as well as their credit rating.

You need to implement the following risk rating functionality:

The risk rating must accompany the credit rating when the credit rating is used.

The risk rating must be able to be used in other areas of the solution to determine processing outcomes.

The risk rating must consist of the following values:

1 = Good

2 = Medium

3 = Risky

The risk rating must be displayed in the Miscellaneous Details tab below the Credit Rating and Credit Limit fields in the Vendor form.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

NEW QUESTION # 253

You need to create an extension of the table and perform a build and synchronize the newly extended table.

Which three actions should you perform in sequence? to answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

Explanation:

☐ Explanation

☐

NEW QUESTION # 254

You are creating a Dynamics 365 Finance and Operations report. You cannot query the data for the report directly.

You must include parameters to specify data for the report.

You need to create the report.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Data contract class

A data contract class defines the parameters for a report that is bound to a report data provider (RDP) class. You can specify one or more groups of report parameters, the order of the groups, and the order in which the report parameters appear in a print dialog box.

Box 2: Report data provider class

Report data provider class - processes business logic based on parameters and a query, and then returns the tables as a dataset for the report.

Box 3: DataContractAttribute

DataContractAttribute - This attribute is applied to an X++ class and specifies that the class can be used as a data contract (that it should be serialized).

Box 4: DataMemberAttribute

DataMemberAttribute - This attribute is applied to a parm(parameter) method on an X++ data contract class and specifies that the data member should be serialized.

Box 5: SRSReportParameterAttribute

You set the SRSReportParameterAttribute attribute to the data contract you created for the RDP class.
