CCRN-Pediatric Test Engine Version - CCRN-Pediatric Real Exam Answers

CCRN Pediatric Practice Exam Questions from AACN with Answers 2024

To promote effective grieving in a 6-year-old sibling following the death of an infant, the nurse should:
A) Recommend that the sibling not attend the infant's memorial service
B) Encourage the parents to minimize their expression of grief with the sibling
C) Explain to the sibling that the infant went to heaven
D) Explain to the sibling that thoughts and wishes did not cause the infant's death
✔ Answer: D) Explain to the sibling that thoughts and wishes did not cause the infant's death: At age 6, children may take words literally and because of their egocentrism, they believe that thoughts are all-powerful. They may truly believe they caused the death of their sibling. A simple, honest explanation of why the sibling died is indicated. This intervention is consistent with Caring Processes.
A) Recommend that the sibling not attend the infant's memorial service: This intervention is not a solution to the problem and will not promote effective grieving for the sibling. It is not consistent with Caring Processes.
B) Encourage the parents to minimize their expression of grief with the sibling: This intervention will lead to ineffective grieving for the sibling and is not consistent with Caring Processes
C) Explain to the sibling that the infant went to heaven: This intervention will not address the sibling's problem

A 5-year-old with a history of congenital hydrocephalus and VP shunt placement at four weeks of age is admitted with increased somnolence, decreased appetite, and increased complaints of headache. This morning the child vomited twice. The nurse should anticipate:
A) The physician ordering lumbar puncture and blood and urine cultures
B) the patient having a CT scan followed by possible shunt revision
C) Administering mannitol or hypertonic saline
D) Administering phenytoin (Dilantin) or fosphenytoin (Cerebyx)
✔ Answer: B) The patient having a CT scan followed by possible shunt revision: This patient is demonstrating signs of increased intracranial pressure. The most likely etiology is malfunction of the VP shunt as a result of blockage or disconnection, which is particularly likely over time as the child grows. The definitive diagnosis is made by a CT scan and a shunt series. Surgical intervention for a shunt revision would be indicated.
A) The physician ordering lumbar puncture and blood and urine cultures: These interventions will not address the most likely primary problem, which is suspected VP shunt malfunction. Additionally, lumbar puncture is contraindicated in the presence of increased intracranial pressure, because downward herniation of the brainstem can occur.

The Prep4cram is committed to acing the Critical Care Nursing Exam (CCRN-Pediatric) exam questions preparation quickly, simply, and smartly. To achieve this objective Prep4cram is offering valid, updated, and real Critical Care Nursing Exam (CCRN-Pediatric) exam dumps in three high-in-demand formats. These Critical Care Nursing Exam (CCRN-Pediatric) exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software. All these three Critical Care Nursing Exam (CCRN-Pediatric) exam dumps formats contain the real and Critical Care Nursing Exam (CCRN-Pediatric) certification exam trainers.

AACN CCRN-Pediatric Exam is a computer-based test that consists of 150 multiple-choice questions. You become eligible for many high-paying jobs with the Network Security Specialist CCRN-Pediatric certification. To pass the AACN CCRN-Pediatric test on your first sitting, you must choose

AACN Critical Care Nursing Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63
When assessing a newborn for developmental dysplasia of the hip, the nurse would expect to assess which of the following:

- A. Ortolani's sign
- B. Characteristic limp
- C. Trendelemburg sign
- D. Symmetrical gluteal folds

Answer: A

Explanation:
Explanation: It is the abnormal clicking sound when the hips are abducted. The sound is produced when the femoral head enters the acetabulum. Letter A is wrong because it should be "asymmetrical gluteal fold". Letter B and C are not applicable for newborns because they are seen in older children.

NEW QUESTION # 64
What type of play is most appropriate for a 6 year old child:

- A. hide and seek
- B. peek-a-boo
- C. make believe
- D. building blocks

Answer: C

Explanation:
Explanation: Make believe is most appropriate because it enhances the imitative play and imagination of the preschooler. Peek-a-boo and building blocks are appropriate for infants, while hide and seek is applicable to school age children.

NEW QUESTION # 65
Dustin, a 3-year-old boy, was admitted to the hospital with nephritic syndrome. The nurse should assign a roommate who is:

- A. a 3-year-old girl with thalassemia
- B. a 3-year-old boy with impetigo
- C. a 3-year-old girl with conjunctivitis
- D. a 3-year-old boy with pneumonia

Answer: A

Explanation:
Explanation: A 3-year-old boy with nephritic syndrome could be assigned a roommate like a 3-year-old girl with thalassemia. A child with nephotic syndrome is at high risk for infection due to the lowered resistance. The child with thalassemia will be a best roommate because it is not communicable.

NEW QUESTION # 66
The nurse is caring for a 12 year-old on admission to the isolation unit. One assessment parameter that will indicate that the child has adequate fluid replacement would be:

- A. absence of thirst
- B. good skin turgor around the area of burn
- C. increased level of hct
- D. urine output of 30 ml.hour

Answer: D

Explanation:
Explanation: For a child who is 12 years old age, urine output of 30ml.hour is adequate, and does not suggest fluid overload.

NEW QUESTION # 67

A mother tells the nurse "the doctor said that my child has pulmonic stenosis. What does it mean?" The nurse's best response should be:

- A. "Let me call your doctor so that your questions will be answered correctly"
- B. "What else did the doctor say about the disease"
- C. "You seemed very concerned. Your baby has a great doctor anyway"
- D. "It means that the baby has a heart failure"

Answer: B

Explanation:
Explanation: The nurse needs to know how much information the mother has before giving any information. We know that the disease is narrowing at the entrance to the pulmonary artery and may vary in severity and treatment. Calling the doctor at this point abdicates the role of the nurse.

NEW QUESTION # 68

......

Our website is considered to be the top test seller of CCRN-Pediatric practice materials, and gives you the best knowledge of the content of the syllabus of CCRN-Pediatric preparation materials. They provide you with the best possible learning prospects by using minimal effort to satisfy the results beyond your expectations. Despite the intricacies of the nominal concept, the questions of CCRN-Pediatric Exam Questions have been made suitable whatever level you are.
