Pass Guaranteed 2026 FSCP: Forescout Certified Professional Exam Latest Certification Test Answers

Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the FSCP exam. Here we recommend our FSCP test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. Under the support of our FSCP Study Materials, passing the FSCP exam won't be an unreachable mission.

Forescout is here to assist you to advance in the quick-paced, technology world if that is your goal. Your dream of passing the Forescout FSCP certification exam on your first try will come true thanks to Forescout's first-rate FSCP Practice Exam. The majority of people struggle to locate outstanding Forescout FSCP exam dumps that can enable them to get ready for the real Forescout FSCP exam.

>> FSCP Certification Test Answers <<

Real FSCP Questions With Free Updates – Start Exam Preparation Today

Currently we release the latest FSCP reliable exam answers for the test which not only cover the accurate study guide but also include more than 80% questions and answers of the real test. If it is still difficult for you to pass exam, or if you are urgent to clear exam in a short at first attempt, our FSCP Reliable Exam Answers will be your only valid choice. Don't hesitate again. Our buyers are companies and candidates from all over the world. It is the best methods for passing exam.

Forescout Certified Professional Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which of the following are included in System backups?

- A. Failover Clustering plugin
- B. Wireless Plugin version 1.4.0 and above
- C. Switch Plugin version 8.7.0 and above
- D. Hostname and IP address
- E. Policies

Answer: E

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:
According to the Forescout Upgrade Guide and System Backup documentation, Policies are included in System backups.
What System Backups Include:
According to the official documentation:
"Each backup saves all Forescout Platform device and Console settings. This data includes the following:
* Configuration
* License
* Operating System settings
* Policies
* Profiles
* Reports
* Administrator accounts
* And other system data"
System Backup Contents:
According to the backup documentation:
System backups include:
* Policies - All configured policies and policy templates
* Configuration - System configuration settings
* License Information - License keys and licensing data
* Administrator Accounts - User accounts and access controls
* Reports - Scheduled and saved reports
* System Settings - Mail, network, and other system configurations
* Profiles - User profiles and system profiles
What System Backups DO NOT Include:
According to the documentation:
System backups are encrypted using AES-256 and include most system data but are separate from:
* Appliance-specific firmware - May require separate backup
* Component-specific backups - Some modules have separate backup procedures
* Log files - Not typically included in system backups
Why Other Options Are Incorrect:
* A. Switch Plugin version 8.7.0 and above - Plugin versions are not individually backed up; plugins are part of the module
installation, not system configuration backup
* C. Hostname and IP address - While these are part of system configuration, they are covered under
"Configuration" not listed separately in backup contents
* D. Failover Clustering plugin - Plugin software itself is not backed up; configuration related to plugins is backed up
* E. Wireless Plugin version 1.4.0 and above - Plugin versions are installed separately; backups contain configuration, not plugin
versions Policy Backup Importance:
According to the documentation:
Policies are one of the most critical items included in system backups because:
* Restore Capability - After system recovery, policies are restored automatically
* Business Continuity - Restoring policies ensures the same security posture
* Compliance - Policies contain compliance rules that must be preserved
* Operational Continuity - Restores endpoint management immediately after recovery System vs. Component Backups:
According to the backup documentation:
* System Backup - Includes policies, configuration, licenses, administrator accounts, etc.
* Component Backup - Specific modules may have additional backup capabilities
* Both backup types - Both are encrypted with AES-256 for security

Backup Encryption:

According to the documentation:

"Both system and component backup files, backed up either manually or via a schedule, are encrypted using AES-256 to protect sensitive file data." This ensures that backed-up policies and other sensitive configuration remain secure.

Referenced Documentation:

* Back Up your Enterprise Manager and/or Appliances - v8.4
* Back Up your Enterprise Manager and/or Appliances - v8.5.1
* Backing Up System and Component Settings - v8.4
* Backing Up Forescout Platform System and Component Settings - v8.5.1

NEW QUESTION # 31

Which of the following User Directory server settings is necessary to enable guest approval by sponsors?

- A. Guest password policy
- B. Authentication Server
- C. Guest Tags
- D. Sponsor Group
- E. Policy to control

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

The Sponsor Group is the necessary User Directory server setting required to enable guest approval by sponsors. According to the Forescout User Directory Plugin Configuration Guide and Guest Management Portal documentation, Sponsor Groups must be created and configured to define the corporate employees (sponsors) who are authorized to approve or decline guest network access requests.

Sponsor Group Configuration:

In the Guest Management pane, the Sponsors tab is used to define the corporate employees who are authorized to log into the Guest Management Portal to approve network access requests from guests. These employees are assigned to specific Sponsor Groups, which control which sponsors can approve guest access requests.

How Sponsor Groups Enable Guest Approval:

* Sponsor Definition - Corporate employees must be designated as sponsors and assigned to a Sponsor Group
* Approval Authority - Sponsors in assigned groups can approve or decline guest network access requests
* Authentication - When "Enable sponsor approval without authentication via emailed link" is selected, sponsors in the designated group can approve guests based on email link authorization
* Guest Registration - Guest registration options connect Sponsor Groups to the guest approval workflow Why Other Options Are Incorrect:

* A. Policy to control - While policies are used for guest control, they do not define which sponsors can approve guests
* B. Guest Tags - Guest Tags are used to classify and organize guest accounts, not to enable sponsor approval
* D. Guest password policy - This setting controls password requirements for guests, not sponsor approval authority
* E. Authentication Server - Authentication servers verify credentials but do not establish sponsor approval groups Referenced Documentation:

* Forescout User Directory Plugin Configuration Guide - Create Sponsors section
* Guest Management Portal - Sponsor Configuration documentation
* "Create sponsors" - Forescout Administration Guide section

NEW QUESTION # 32

Why would the patch delivery optimization mechanism used for Windows 10 updates be a potential security concern?

- A. It always uses a peer-to-peer file sharing protocol
- B. It can be configured to use a peer-to-peer file sharing protocol
- C. It uses a peer-to-peer file sharing protocol by default
- D. CounterACT cannot initiate Windows updates for Windows 10 devices
- E. The registry DWORD controlling this behavior cannot be changed

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:
According to the Windows Update Delivery Optimization documentation and security analysis, the potential security concern with patch delivery optimization for Windows 10 updates is that it CAN BE CONFIGURED to use a peer-to-peer file sharing protocol. While the feature includes security mechanisms like cryptographic signing, the capability to enable P2P sharing does create potential security concerns depending on the configuration.

Windows Update Delivery Optimization Overview:
According to the Windows Delivery Optimization documentation:
"Windows Update Delivery Optimization is a feature in Microsoft's Windows designed to improve the efficiency of downloading and distributing updates. Instead of each device independently downloading updates from Microsoft's servers, Update Delivery Optimization allows devices to share update files with each other, either within a local network or over the internet. This peer-to-peer (p2p) approach reduces bandwidth consumption and accelerates the update process." Configuration Flexibility:
According to the documentation:
The P2P feature is configurable, not mandated:
* Default Setting - By default, Delivery Optimization is enabled for local network sharing
* Configurable Options:
* PCs on my local network only (safer)
* PCs on my local network and the internet (broader sharing, higher risk)
* Disabled entirely
Security Concerns Related to P2P Configuration:
According to the security analysis:
When P2P is enabled, potential concerns include:
* Network Isolation Risks - In firewalled or segmented networks, P2P discovery can expose endpoints
* Bandwidth Consumption - Improperly configured P2P can saturate network resources
* Peer Discovery Vulnerabilities - Devices must discover each other, potentially exposing endpoints
* Internet-based Sharing Risks - When "internet peers" are enabled, updates are shared across the internet
* Privacy Implications - Devices communicating for update sharing may leak information Cryptographic Protection Does NOT Eliminate Configuration Risk:
According to the documentation:
"While Update Delivery Optimization ensures that all update files are cryptographically signed and verified before installation, some organizations may still be concerned about allowing peer-to-peer data sharing." While the updates themselves are protected, the act of enabling P2P configuration creates the security concern.
Why Other Options Are Incorrect:
* B. CounterACT cannot initiate Windows updates for Windows 10 - Incorrect; CounterACT can initiate Windows updates; this is not the security concern
* C. It uses peer-to-peer by default - Incorrect; while enabled by default for local networks, internet P2P sharing requires explicit configuration
* D. The registry DWORD cannot be changed - Incorrect; the DO modes registry value (DODownloadMode) CAN be changed via GPO or registry
* E. It always uses peer-to-peer - Incorrect; P2P is configurable, not mandatory; organizations can disable it entirely Registry DWORD Configuration Options:
According to the Windows documentation:
The DODownloadMode DWORD value can be configured to:
* 0 = HTTP only, no peering (addresses security concern)
* 1 = HTTP blended with local peering (moderate risk)
* 3 = HTTP blended with internet peering (higher risk - the security concern)
* 99 = Simple download mode
This demonstrates that P2P can be configured, which is the security concern mentioned in the question.

NEW QUESTION # 33
Which of the following User Directory server settings is necessary to enable guest approval by sponsors?

- A. Guest password policy
- B. Authentication Server
- C. Guest Tags
- D. Sponsor Group

- E. Policy to control

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:
The Sponsor Group is the necessary User Directory server setting required to enable guest approval by sponsors. According to the Forescout User Directory Plugin Configuration Guide and Guest Management Portal documentation, Sponsor Groups must be created and configured to define the corporate employees (sponsors) who are authorized to approve or decline guest network access requests.
Sponsor Group Configuration:
In the Guest Management pane, the Sponsors tab is used to define the corporate employees who are authorized to log into the Guest Management Portal to approve network access requests from guests. These employees are assigned to specific Sponsor Groups, which control which sponsors can approve guest access requests.
How Sponsor Groups Enable Guest Approval:
* Sponsor Definition - Corporate employees must be designated as sponsors and assigned to a Sponsor Group
* Approval Authority - Sponsors in assigned groups can approve or decline guest network access requests
* Authentication - When "Enable sponsor approval without authentication via emailed link" is selected, sponsors in the designated group can approve guests based on email link authorization
* Guest Registration - Guest registration options connect Sponsor Groups to the guest approval workflow Why Other Options Are Incorrect:
* A. Policy to control - While policies are used for guest control, they do not define which sponsors can approve guests
* B. Guest Tags - Guest Tags are used to classify and organize guest accounts, not to enable sponsor approval
* D. Guest password policy - This setting controls password requirements for guests, not sponsor approval authority
* E. Authentication Server - Authentication servers verify credentials but do not establish sponsor approval groups Referenced Documentation:
* Forescout User Directory Plugin Configuration Guide - Create Sponsors section
* Guest Management Portal - Sponsor Configuration documentation
* "Create sponsors" - Forescout Administration Guide section

NEW QUESTION # 34
When configuring policies, which of the following statements is true regarding this image?

- A. Negates the criteria inside the property
- B. The NOT checkbox means the "Evaluate Irresolvable as" should be set to False
- C. The NOT checkbox means the "Evaluate Irresolvable as" should be set to True
- D. Has no effect on irresolvable hosts
- E. The external NOT does not change the meaning of "evaluate irresolvable as"

Answer: A

Explanation:
The NOT checkbox negates the criteria inside the property. According to the Forescout Administration Guide, when the NOT checkbox is selected on a policy condition criteria, it reverses the logic of that specific criterion evaluation.
Understanding the NOT Operator in Policy Conditions:
In Forescout policy configuration, the NOT operator is a Boolean logic operator that inverts the result of the property evaluation.
When you select the NOT checkbox:
* Logical Inversion - The condition is evaluated normally, and then the result is inverted
* Criteria Negation - If a criteria would normally match an endpoint, selecting NOT causes it NOT to match
* Property-Level Operation - The NOT operator applies specifically to that individual property/criterion, not to the entire rule
Example of NOT Logic:
Without NOT:
* Condition: "Windows Antivirus Running = True"
* Result: Matches endpoints that HAVE antivirus running

With NOT:
* Condition: "NOT (Windows Antivirus Running = True)"
* Result: Matches endpoints that DO NOT have antivirus running
NOT vs. "Evaluate Irresolvable As":
According to the documentation, the NOT operator and "Evaluate Irresolvable As" are independent settings:
* NOT operator - Negates/inverts the criteria evaluation itself
* "Evaluate Irresolvable As" - Defines what happens when a property CANNOT be resolved (is irresolvable) These serve different purposes:
* NOT determines what value to match
* Evaluate Irresolvable As determines how to handle unresolvable properties Handling Irresolvable Criteria:
According to the administration guide documentation:
"If you do not select the Evaluate irresolvable criteria as option, the criteria is handled as irresolvable and the endpoint does not undergo further analysis." The "Evaluate Irresolvable As" checkbox allows you to define whether an irresolvable property should be treated as True or False when the property value cannot be determined. This is independent of the NOT checkbox.
Why Other Options Are Incorrect:
* A. The NOT checkbox means the "Evaluate Irresolvable as" should be set to Test - Incorrect; NOT and Evaluate Irresolvable As are independent settings
* B. The external NOT does not change the meaning of "evaluate irresolvable as" - While technically true that NOT doesn't change the Evaluate Irresolvable setting, the answer doesn't explain what NOT actually does
* C. Has no effect on irresolvable hosts - Incorrect; NOT negates the criterion logic regardless of whether it's resolvable
* E. The NOT checkbox means the "Evaluate Irresolvable as" should be set to False - Incorrect; NOT and Evaluate Irresolvable As are independent Policy Condition Structure:
According to the documentation, a policy condition consists of:
* Property criteria combined with Boolean logic operators
* Individual criterion settings including NOT operator
* Irresolvable handling options that are separate from the NOT operator Referenced Documentation:
* Forescout Administration Guide - Define policy scope
* Forescout eyeSight policy sub-rule advanced options
* Handling Irresolvable Criteria section
* Working with Policy Conditions

NEW QUESTION # 35
......

The services provided by our FSCP test questions are quite specific and comprehensive. First of all, our test material comes from many experts. The gold content of the materials is very high, and the updating speed is fast. By our FSCP exam prep, you can find the most suitable information according to your own learning needs at any time, and make adjustments and perfect them at any time. Our FSCP Learning Materials not only provide you with information, but also for you to develop the most suitable for your learning schedule, this is tailor-made for you, according to the timetable to study and review. I believe you can improve efficiency.

FSCP Reliable Exam Cost: https://www.prep4pass.com/FSCP_exam-braindumps.html

Forescout FSCP Certification Test Answers Besides, we keep our customers' financial data and personal information private and secure, and never share it with the third part without the permission of you, We guarantee that you can enjoy the premier certificate learning experience under our help with our FSCP prep guide, You have the option to download updated Forescout FSCP exam questions up to 12 months from the date of Forescout FSCP exam questions purchase.

Consumers and workers voice skepticism around the privacy protections in remote FSCP Reliable Exam Cost work technologies and the trustworthiness of companies to protect their data as their healthcare, education, work, and social lives move further online.

Unparalleled Forescout FSCP Certification Test Answers: Forescout Certified Professional Exam Pass Guaranteed

Even though the selected profile is grayed out when FSCP this box is unchecked, it's still set as the Composite printer profile, Besides, we keep our customers' financial data and personal information FSCP Certification Test Answers private and secure, and never share it with the third part without the permission of you.

We guarantee that you can enjoy the premier certificate learning experience under our help with our FSCP prep guide, You have the option to download updated Forescout FSCP exam questions up to 12 months from the date of Forescout FSCP exam questions purchase.

The content of our FSCP pass guide cover almost questions of the actual test, You will be glad to witness your growth.
