What's more, part of that Prep4sureExam PAP-001 dumps now are free: https://drive.google.com/open?id=14Eq_3SOQZov2OzZ5VLVj-rUZW_YMwkeI

We offer free demos and updates if there are any for your reference beside real PAP-001 real materials. By downloading the free demos you will catch on the basic essences of our PAP-001 guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our PAP-001 Exam Dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

Ping Identity PAP-001 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings. |
| Topic 2 | <ul style="list-style-type: none"> Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement. |

| | |
|---------|---|
| Topic 3 | <ul style="list-style-type: none"> • General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files. |
| Topic 4 | <ul style="list-style-type: none"> • General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively. |
| Topic 5 | <ul style="list-style-type: none"> • Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions. |
| Topic 6 | <ul style="list-style-type: none"> • Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management. |

PAP-001 Exam Registration - Latest PAP-001 Exam Simulator

To increase your chances of success, consider utilizing the Prep4sureExam PAP-001 Exam Questions, which are valid, updated, and reflective of the actual PAP-001 exam. Don't miss the opportunity to strengthen your Ping Identity PAP-001 exam preparation with these valuable questions. The Prep4sureExam is a leading platform that has been assisting the Ping Identity PAP-001 Exam candidates for many years. Over this long time period countless PAP-001 exam candidates have passed their Ping Identity PAP-001 certification exam. They got success in Certified Professional - PingAccess exam with flying colors and did a job in top world companies.

Ping Identity Certified Professional - PingAccess Sample Questions (Q65-Q70):

NEW QUESTION # 65

An administrator needs to support SLO (Single Logout) for a protected web application. What must be configured in a PingAccess Web Session in this situation?

- A. Refresh User Attributes
- **B. SLO scope**
- C. Validate Session
- D. Idle timeout

Answer: B

Explanation:

To enable Single Logout (SLO), the SLO scope must be defined in the PingAccess Web Session configuration. This determines which sessions are ended when a logout request occurs.

Exact Extract:

"The SLO scope option in a web session specifies which applications are included in a logout event when Single Logout is triggered."

* Option A (SLO scope) is correct; it explicitly enables SLO support by linking session termination across apps.

* Option B (Idle timeout) is unrelated; this controls session expiration, not SLO.

* Option C (Validate Session) ensures session state is synchronized but does not configure SLO.

* Option D (Refresh User Attributes) is unrelated; it only controls whether attributes are reloaded.

Reference: PingAccess Administration Guide - Configuring Web Sessions

NEW QUESTION # 66

A change is made to the configuration that prevents user access to an application. No one claims to have made the change. Which log file should the administrator use to determine who made the change?

- A. pingaccess.log
- **B. pingaccess_api_audit.log**
- C. pingaccess_agent_audit.log
- D. pingaccess_engine_audit.log

Answer: B

Explanation:

All administrative API calls that change PingAccess configuration are logged in pingaccess_api_audit.log.

This allows administrators to track who made configuration changes.

Exact Extract:

"The pingaccess_api_audit.log file contains entries for all administrative API calls and is used to audit configuration changes."

* Option A (pingaccess.log) contains runtime system messages but not detailed API audit entries.

* Option B (pingaccess_engine_audit.log) is specific to engine request/response audit logging.

* Option C (pingaccess_agent_audit.log) is used for PingAccess Agent traffic auditing, not administrative changes.

* Option D (pingaccess_api_audit.log) is correct - it tracks admin API modifications.

Reference: PingAccess Administration Guide - Log Files

NEW QUESTION # 67

An administrator is setting up PingAccess to terminate SSL for a proxied application. What action must the administrator take to configure an existing certificate for that application?

- A. Set the secure flag to Yes in the Site configuration
- **B. Assign the Key Pair to the Virtual Host**
- C. Enable Require HTTPS in the Application configuration
- D. Assign the Key Pair to the Agent Listener

Answer: B

Explanation:

PingAccess terminates SSL at the Virtual Host level. To configure an existing certificate, the administrator must assign the appropriate Key Pair (which contains the certificate and private key) to the Virtual Host.

Exact Extract:

"SSL termination occurs on the engine listener through virtual hosts. Assign the certificate's key pair to the virtual host to secure proxied applications."

* Option A is correct - assign the key pair to the Virtual Host for SSL termination.

* Option B is incorrect - Require HTTPS enforces secure access but does not configure SSL termination.

* Option C is incorrect - Agent Listener is for PingAccess Agents, not proxied apps.

* Option D is incorrect - secure flag affects cookie settings, not SSL certificates.

Reference: PingAccess Administration Guide - Virtual Hosts and Key Pairs

NEW QUESTION # 68

An administrator needs to prevent PingAccess from automatically starting on a Windows Server. Which command would accomplish this task?

- A. init.bat
- B. remove-install.bat
- **C. uninstall-service.bat**
- D. wrapper-service.bat

Answer: C

Explanation:

PingAccess installs as a Windows service. To remove or prevent automatic startup, the uninstall-service.bat script is used.

Exact Extract:

"On Windows, use install-service.bat to install PingAccess as a service and uninstall-service.bat to remove the service."

- * Option A (init.bat) initializes environment variables but does not manage services.
 - * Option B (uninstall-service.bat) is correct - it removes the Windows service, preventing auto-start.
 - * Option C (remove-install.bat) is not a valid PingAccess script.
 - * Option D (wrapper-service.bat) configures wrapper options, not service removal.
- Reference: PingAccess Installation Guide - Windows Service Scripts

NEW QUESTION # 69

A department has a requirement to protect anything in its application that resides in a folder named "escalated," no matter where that folder is in the path. Which path prefix should be used in this situation?

- A. /*escalated/
- B. escalated/
- C. */escalated/+
- **D. */escalated/**

Answer: D

Explanation:

PingAccess supports flexible path matching for resources using wildcards. If the requirement is to match any path that contains a folder named "escalated", the correct format is:

* */escalated/# matches any location of the escalated directory within the path.

Exact Extract:

"The asterisk (*) wildcard matches zero or more characters. Use it in resource paths to match folders at any depth."

* Option A (escalated/) only matches when the resource starts with "escalated/" at the root, not at arbitrary depth.

* Option B (*/escalated/) is correct - it matches the escalated folder no matter where it occurs.

* Option C (*/escalated/+) is incorrect - + is not a valid PingAccess wildcard operator.

* Option D (/escalated/) matches only when the path starts with "escalated" at the first level, not arbitrary positions.

Reference: PingAccess Administration Guide - Resource Path Matching

NEW QUESTION # 70

.....

No matter which country or region you are in, our PAP-001 exam questions can provide you with thoughtful services to help you pass exam successfully for our PAP-001 study materials are global and warmly praised by the loyal customers all over the world. They have many advantages, and if you want to know or try them before your payment, you can find the free demos of our PAP-001 learning guide on our website, you can free download them to check the excellent quality.
